Between 1 September 2014 and 28 February 2015 both erythropoietin alfa (Eprex) and Roche's brand of erythropoietin beta (NeoRecormon) will be listed, fully funded. Erythropoietin beta (NeoRecormon) will be delisted 1 March 2015.

Tacrolimus brand change – wastage reminder

Wastage can be claimed on the Prograf brand of tacrolimus from 1 August 2014 until 31 October 2014, allowing pharmacists to claim up to a maximum of 90% of one pack of each strength during this period.

Amoxicillin grans for oral liq – supply update

PHARMAC is continuing to work with suppliers of amoxicillin oral liquids following the Amoxicillin Actavis recall.

Reference pricing for Ospamox and sole supply for Amoxicillin Actavis has been delayed until further notice.

The Ranmoxy brand was temporarily listed from 1 August 2014 with supplies now available. A further limited quantity of Ospamox is also now available. This stock should be sufficient to supply the market for several months until a longer term supply is secured.

Pharmacists and health providers are reminded to read the label of each product for reconstitution, storage and expiry details.

Lenalidomide – new listing

The Revlimid brand of lenalidomide 10 mg and 25 mg capsules will be listed from 1 September 2014 subject to a Retail Pharmacy - Specialist restriction and Special Authority criteria for patients with multiple myeloma.

Arrow-Topiramate to be discontinued

Actavis has notified impending discontinuation of the Arrow-Topiramate brand of topiramate. PHARMAC is investigating a replacement brand to list from 1 November 2014. The Topamax brand is unaffected.

- 1 The patient's transfusion requirement continues to be reduced with erythropoietin treatment; and
- 2 Transformation to acute myeloid leukaemia has not occurred; and
- 3 The minimum necessary dose of erythropoietin would be used and will not exceed 80,000 iu per week.

*Indication marked with * is an Unapproved Indication

Notes: Erythropoietin **alfa beta** is indicated in the treatment of anaemia associated with chronic renal failure (CRF) where no cause for anaemia other than CRF is detected and there is adequate monitoring of iron stores and iron replacement therapy.

The Goeckroft-Gault Formula may be used to estimate glomerular filtration rate (GFR) in persons 18 years and over:

GFR (ml/min) (male) = $(140 - \text{age}) \times \text{Ideal Body Weight (kg)} / 814 \times \text{serum creatinine (mmol/l)}$

GFR (ml/min) (female) = Estimated GFR (male) $\times 0.85$
