What's changing?

The following Tender products will be listed from 1 December 2015:

- Desferal (desferrioxamine mesilate) inj 500 mg vial
- m-Nystatin (nystatin) oral liquid 100,000 u per ml, 24 ml OP
- OxyNorm (oxycodone hydrochloride) inj 10 mg per ml, 1 ml and 2 ml ampoules

Sole Supply for these products will commence 1 May 2016.

Nystatin oral liquid

Multichem has an amount of the Aspen brand (Nilstat) which will be supplied at the new price, while it is still available. The Multichem product (m-Nystatin) will be supplied when the Aspen stock has been exhausted.

Pizotifen (Sandomigran)

PHARMAC has been advised that there may be a delay in the availability of pizotifen (Sandomigran) 500 mg tab blister packs. AFT have both blister packs and bottles registered in New Zealand, and have sourced the Australian bottle as a substitute. The bottle presentation will be listed from 1 December 2015 at the same price and subsidy as the blister pack. The pack size, strength, and active ingredient are unchanged.

A-Scabies – out of stock

We have been advised that A-Scabies (permethrin) 5% lotion remains out of stock. Lyderm (permethrin) 5% cream remains available. The supplier, AFT is working to resume supply as soon as possible and will notify the market with an anticipated timeframe when this is known.

Sertraline 50 mg tablets

The Sertraline Actavis brand of sertraline 50 mg tablets will continue to be listed temporarily to cover the shortage of Arrow-Sertraline 50 mg tablets. The Sertraline Actavis brand is not Medsafe-approved so will continue to be supplied in accordance with section 29 of the Medicines Act 1981. For more information, contact Actavis on 0800 800 097.

Funded treatment for *Helicobacter pylori*

PHARMAC has received a number of enquiries from patients with *Helicobacter pylori* who have been charged for clarithromycin 500 mg tablets.

Clarithromycin 500 mg tablets, up to a maximum of 14 tablets per prescription, are funded for the eradication of *H. pylori* when prescribed in combination with a proton pump inhibitor and either amoxicillin or metronidazole, or for the eradication of *H. pylori* where the prescription is endorsed accordingly.

We suggest that pharmacists contact the prescriber if the 250 mg tab clarithromycin is prescribed to let them know the 500 mg tablets is funded under these conditions.

Cefaclor monohydrate caps 250 mg

Douglas Pharmaceuticals has notified of a shortage of its brand of cefaclor monohydrate caps 250 mg (Ranbaxy-Cefaclor). There is some stock remaining at wholesalers and Douglas expects stock to be available again in mid December. Alternative pharmaceuticals, including cefaclor granules of oral liquid, are listed fully funded on the Pharmaceutical Schedule. For more information, contact Douglas on 09-835 0660.

News in brief

- Listing of **Aqueous cream SLS-free** has been further delayed. PHARMAC anticipates it will be listed from 1 January 2016 with the sole subsidised supply beginning from 1 June 2016.
- **Insulin pump reservoir** 10 x luer lock conversion cartridge 3.0 ml for Paradigm pumps to be discontinued by supplier from 1 December 2015. They will be delisted from 1 June 2016.
- A new brand of **enteral/oral semi-elemental feed 1.5 kcal/ml** (Vital 1,000 ml OP) to be listed from 1 December 2015. Vital HN powder 79 g OP will be delisted from 1 February 2016 following supplier discontinuation.

Notes: Subsidy for patients pre-approved by PHARMAC on 1 August 2009. Approvals valid without further renewal unless notified. No new approvals will be granted from 1 August 2009.

Initial application—(Epilepsy) from any relevant practitioner. Approvals valid for 15 months for applications meeting the following criteria:

Either:

1 Seizures are not adequately controlled with optimal treatment with other antiepilepsy agents; or

2 Seizures are controlled adequately but the patient has experienced unacceptable side effects from optimal treatment with other antiepilepsy agents.

Note: "Optimal treatment with other antiepilepsy agents" is defined as treatment with other antiepilepsy agents which are indicated and clinically appropriate for the patient, given in adequate doses for the patient's age, weight, and other features affecting the pharmacokinetics of the drug with good evidence of compliance.

Initial application – (Neuropathic pain or Chronic Kidney Disease associated pruritus) from any relevant practitioner. Approvals valid for 3 months for applications meeting the following criteria:

Either:

1 The patient has been diagnosed with neuropathic pain; or

2 Both:

2.1 The patient has Chronic Kidney Disease Stage 5-associated pruritus* where no other cause for pruritus can be identified (e.g. scabies, allergy); and

2.2 The patient has persistent pruritus not relieved with a trial of emollient/moisturising creams alone.

Renewal – (Epilepsy) from any relevant practitioner. Approvals valid without further renewal unless notified where the patient has demonstrated a significant and sustained improvement in seizure rate or severity and/or quality of life.

Note: As a guideline, clinical trials have referred to a notional 50% reduction in seizure frequency as an indicator of success with anticonvulsant therapy and have assessed quality of life from the patient's perspective.

Renewal – (Neuropathic pain or Chronic Kidney Disease associated pruritus) from any relevant practitioner. Approvals valid for 2 years for applications meeting the following criteria:

Either:

- 1 The patient has demonstrated a marked improvement in their control of pain or itch (prescriber determined); or**
- 2 The patient has previously demonstrated clinical responsiveness to gabapentin and has now developed neuropathic pain in a new site.**

Note: Indications marked with * are Unapproved Indications (see Interpretations and Definitions). Dosage adjustment of gabapentin is recommended for patients with renal impairment.

147 OTHER MULTIPLE SCLEROSIS TREATMENTS (GLATIRAMER ACETATE, INTERFERON BETA-1-ALPHA AND INTERFERON BETA-1-BETA)

▶ SA1553 †484 Special Authority for Subsidy

Special Authority approved by the Multiple Sclerosis Treatment Committee

Notes: Special Authority approved by the Multiple Sclerosis Treatment Assessment Committee (MSTAC).

Applications will be considered by MSTAC at its regular meetings and approved subject to eligibility according to the Entry and Stopping criteria (below). Application details may be obtained from PHARMAC's website <http://www.pharmac.govt.nz> or:

The coordinator
Multiple Sclerosis Treatment Assessment Committee
PHARMAC PO Box 10 254
Wellington

Phone: 04 460 4990
Facsimile: 04 916 7571
Email: mstacordinator@pharmac.govt.nz

Completed application forms must be sent to the coordinator for MSTAC and will be considered by MSTAC at the next practicable opportunity.

Notification of MSTAC's decision will be sent to the patient, the applying clinician and the patient's GP (if specified). These agents will NOT be subsidised if dispensed from a community or hospital pharmacy. Regular supplies will be distributed to all approved patients or their clinicians by courier.

Prescribers must send quarterly prescriptions for approved patients to the MSTAC coordinator.

Only prescriptions for 6 million iu of interferon beta-1-alpha per week, or 8 million iu of interferon beta-1-beta every other day, or 20 mg glatiramer acetate daily will be subsidised.

Switching between treatments is permitted within the 12 month approval period without reapproval by MSTAC. The MSTAC coordinator should be notified of the change and a new prescription provided.

Entry Criteria

- a) Diagnosis of multiple sclerosis (MS) must be confirmed by a neurologist. Diagnosis must include MRI confirmation; and
- b) patients must have Clinically Definite Relapsing Remitting MS with or without underlying progression; and
- c) patients must have:
 - a) EDSS score 0 - 4.0 and:
 - Experienced at least 1 significant relapse of MS in the previous 12 months or 2 significant relapses in the past 24 months; and
 - Evidence of MRI activity on a scan within the past 24 months (either a contrast enhancing lesion or with new T2 lesions(s) compared with a previous scan); and

continued...

Changes to Restrictions – effective 1 November 2015 (continued)

continued...

- d) A significant relapse must:
 - a) be confirmed by the applying neurologist or general physician (the patient may not necessarily have been seen by them during the relapse but the neurologist/physician must be satisfied that the clinical features were characteristic and met the specified criteria);
 - b) be associated with characteristic new symptom(s)/sign(s) or substantial worsening of previously experienced symptom(s)/sign(s);
 - c) last at least one week;
 - d) start at least one month after the onset of a previous relapse;
 - e) be severe enough to change either the EDSS or at least one of the Kurtzke Functional System scores by at least 1 point;
 - f) be distinguishable from the effects of general fatigue; and
 - g) not be associated with a fever ($T > 37.5^{\circ}\text{C}$); and
- e) applications must be made by the patient's neurologist; and
- f) patients must have no previous history of lack of response to beta-interferon or glatiramer acetate; and
- g) patients must have either:
 - a) intolerance to both natalizumab and fingolimod; or
 - b) treatment with both natalizumab and fingolimod is considered clinically inappropriate; and
- h) patient will not be co-prescribed natalizumab or fingolimod.

Stopping Criteria

Any of the following:

- a) Confirmed progression of disability that is sustained for six months during a minimum of one year of treatment. Progression of disability is defined as progress by any of the following EDSS Points:
 - a) from starting at EDSS 0 increasing to (i.e. stopping on reaching) EDSS 3.0; or
 - b) 1.0 to 3.0; or
 - c) 1.5 to 3.5; or
 - d) 2.0 to 4.0; or
 - e) 2.5 to 4.5; or
 - f) 3.0 to 4.5; or
 - g) 3.5 to 4.5; or
 - h) 4.0 to 4.5.
- b) increasing relapse rate over 12 months of treatment (compared with the relapse rate on starting treatment) (see note); or
- c) intolerance to interferon beta-1-alpha, and/or interferon beta-1-beta and/or glatiramer acetate; or
- d) non-compliance with treatment, including refusal to undergo annual assessment.

Note: Treatment with interferon beta -1-beta, interferon beta-1-alpha and glatiramer acetate, is permitted only if treatment with both natalizumab and fingolimod is not tolerated or treatment with both would be clinically inappropriate. Beta-interferon or glatiramer acetate will not be funded as second line treatments if EDSS progression has occurred on treatment with natalizumab or fingolimod.

Patients who have an increasing relapse rate over 12 months of treatment (compared with the relapse rate on starting treatment) and who do not meet the EDSS Stopping Criteria at annual review may switch from either of the beta-interferon's [interferon beta-1-beta or interferon beta-1-alpha] to glatiramer acetate or vice versa. Patients may switch from either of the beta-interferon's [interferon beta-1-beta or interferon beta-1-alpha] to glatiramer acetate or vice versa for increased relapses only once, after which they will be required to stop funded treatment if they meet any of the Stopping Criteria at annual review (including the criterion relating to increasing relapse rate over 12 months of treatment).

If a relapse has resulted in an increased EDSS score that potentially may lead to discontinuation of treatment according to stopping criteria, a period of 6 months is allowed from the start of the relapse for recovery to occur.

In this setting anti-JCV antibody positive status may be accepted as a clinically inappropriate reason for treatment with natalizumab.

Entry Criteria for patients with an EDSS of 4.5-5.5 who have not had an application for funding considered prior to 1 November 2014

- a) Diagnosis of multiple sclerosis (MS) must be confirmed by a neurologist. Diagnosis should as a rule include MRI confirmation. For patients diagnosed before MRI was widely utilised in New Zealand, confirmation of diagnosis via clinical assessment and laboratory/ancillary data must be provided; and
- b) patients must have Clinically Definite Relapsing Remitting MS with or without underlying progression; and
- c) patients must have:
 - a) EDSS score 4.5-5.5 with 2+ relapses:
 - Experienced at least 2 significant relapses of MS in the previous 12 months; and
 - An EDSS score of between 4.5-5.5; and
- d) Each relapse must:
 - a) be confirmed by a neurologist or general physician (the patient may not necessarily have been seen during the relapse but the neurologist/physician must be satisfied that the clinical features were characteristic and met the specified criteria);
 - b) be associated with characteristic new symptom(s)/sign(s) or substantial worsening of previously experienced symptom(s)/sign(s);
 - c) last at least one week;
 - d) follow a period of stability of at least one month;
 - e) be severe enough to change either the EDSS or at least one of the Kurtzke functional systems scores by at least 1 point;
 - f) be distinguishable from the effects of general fatigue; and
 - g) not be associated with a fever ($T > 37.5^{\circ}\text{C}$); and
- e) applications must be made at least four weeks after the date of the onset of the last known relapse; and
- f) patients must have no previous history of lack of response to beta-interferon or glatiramer acetate (see criteria for stopping);
- g) applications must be submitted to the Multiple Sclerosis Treatment Assessment Committee (MSTAC) by the patient's neurologist or a general physician; and
- h) patients must agree (via informed consent) to co-operate if as a result of their meeting the stopping criteria, funding is withdrawn. Patients must agree to the collection of clinical data relating to their MS and use of those data by PHARMAC; and
- i) patients must agree to allow clinical data to be collected and reviewed by MSTAC annually for each year in which they receive funding for beta-interferon or glatiramer acetate.

Stopping Criteria for patients with an EDSS of 4.5-5.5 who have not had an application for funding considered prior to 1 November 2014

Any of the following:

- a) Confirmed progression of disability that is sustained for six months during a minimum of one year of treatment. Progression of disability is defined as progress by any of the following:
 - a) an increase of 1 EDSS point where starting EDSS 3.5 or greater; or
 - b) an increase in EDSS score to 6.0 or more; or
- b) stable or increasing relapse rate over 12 months of treatment (compared with the relapse rate on starting treatment) (see note); or
- c) pregnancy and/or lactation; or
- d) within the 12 month approval year, intolerance to interferon beta 1-alpha, and/or interferon beta 1-beta and/or glatiramer acetate; or
- e) non-compliance with treatment, including refusal to undergo annual assessment or refusal to allow the results of the assessment to be submitted to MSTAC; or
- f) patients may, subject to conclusions drawn from published evidence available at the time, be excluded if they develop a high titre of neutralising anti-bodies to beta-interferon or glatiramer acetate.

Note: Patients who have a stable or increasing relapse rate over 12 months of treatment (compared with the relapse rate on starting treatment) and who do not meet any of the other Stopping Criteria at annual review
