Introducing Pharmac

The Pharmaceutical Management Agency (Pharmac) makes decisions that help control Government spending on pharmaceuticals. This includes community pharmaceuticals, hospital pharmaceuticals, vaccines and increasingly, hospital medical devices. Pharmac negotiates prices, sets subsidy levels and conditions, and makes decisions on changes to the subsidised list.

Pharmac's role:

"to secure for eligible people in need of pharmaceuticals, the best health outcomes that are reasonably achievable from pharmaceutical treatment and from within the amount of funding provided."

Pae Ora (Healthy Futures) Act 2022

To ensure our decisions are as fair and robust as possible we use a decision-making process that incorporates clinical, economic and commercial issues. We also seek the views of users and the wider community through consultation. The processes we generally use are outlined in our Operating Policies and Procedures.
Further information about Pharmac and the way we make funding decisions can be found on the Pharmac website at https://pharmac.govt.nz/about.

Glossary

Units of Measure

gram ..... g	microgram..... mcg	millimole..... mmol
kilogram..... kg	milligram ..... mg	unit..... u
international unit ..... iu	millilitre..... ml	

Abbreviations

application ..... app	enteric coated..... EC	solution .....soln
capsule ..... cap	granules..... grans	suppository .....suppos
cream..... crm	injection .....inj	tablet..... tab
dispersible .....disp	liquid .....liq	tincture.....tinc
effervescent..... eff	lotion..... lotn	
emulsion ..... emul	ointment..... oint

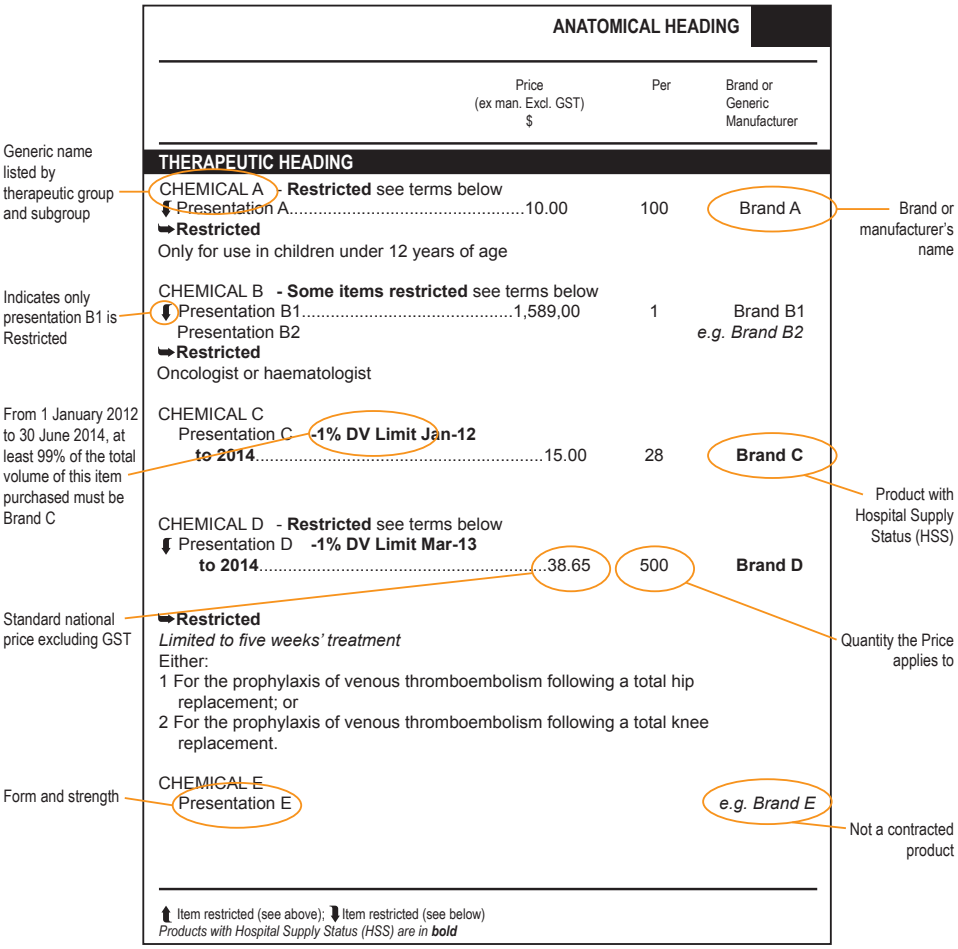
Guide to Section H listings

Example



General Rules for Section H of the Pharmaceutical Schedule are included in Section A.

Read the General Rules : https://pharmac.govt.nz/section-a.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Antacids and Antiflatulents

Antacids and Reflux Barrier Agents

ALUMINIUM HYDROXIDE WITH MAGNESIUM HYDROXIDE AND SIMETICONE

Tab 200 mg with magnesium hydroxide 200 mg and simeticone 20 mg — *e.g. Mylanta*

Oral liq 400 mg with magnesium hydroxide 400 mg and simeticone 30 mg per 5 ml — *e.g. Mylanta Double Strength*

SIMETICONE

Oral drops 100 mg per ml

Oral drops 20 mg per 0.3 ml

Oral drops 40 mg per ml

SODIUM ALGINATE WITH MAGNESIUM ALGINATE

Powder for oral soln 225 mg with magnesium alginate 87.5 mg, sachet — *e.g. Gaviscon Infant*

SODIUM ALGINATE WITH SODIUM BICARBONATE AND CALCIUM CARBONATE

Tab 500 mg with sodium bicarbonate 267 mg and calcium carbonate 160 mg — *e.g. Gaviscon Extra Strength*

Oral liq 500 mg with sodium bicarbonate 267 mg and calcium carbonate 160 mg per 10 ml — 7.50 — 500 ml — Acidex

SODIUM CITRATE

Oral liq 8.8% (300 mmol/l) — 25.00 — 90 ml — Biomed

Phosphate Binding Agents

ALUMINIUM HYDROXIDE

Tab 600 mg

CALCIUM CARBONATE – **Restricted** see terms below

⬇ Oral liq 250 mg per ml (100 mg elemental per ml) — 47.30 — 473 ml — Calcium carbonate PAI

39.00 — 500 ml — Roxane

➥ **Restricted** (RS1698)

Initiation

Only when prescribed for patients unable to swallow calcium carbonate tablets or where calcium carbonate tablets are inappropriate..

Antidiarrhoeals and Intestinal Anti-Inflammatory Agents

Antipropulsives

DIPHENOXYLATE HYDROCHLORIDE WITH ATROPINE SULPHATE

Tab 2.5 mg with atropine sulphate 25 mcg

LOPERAMIDE HYDROCHLORIDE

Tab 2 mg — 10.75 — 400 — Nodia

Cap 2 mg — 7.25 — 400 — Diamide Relief

Rectal and Colonic Anti-Inflammatories

BUDESONIDE – **Restricted** see terms on the next page

⬇ Cap modified-release 3 mg – **5% DV Dec-25 to 2028** — 33.38 — 90 — **Budesonide Te Arai**

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1723)

Initiation – Crohn's disease

Both:

1 Mild to moderate ileal, ileocaecal or proximal Crohn's disease; and
2 Any of the following:
- 2.1 Diabetes; or
- 2.2 Cushingoid habitus; or
- 2.3 Osteoporosis where there is significant risk of fracture; or
- 2.4 Severe acne following treatment with conventional corticosteroid therapy; or
- 2.5 History of severe psychiatric problems associated with corticosteroid treatment; or
- 2.6 History of major mental illness (such as bipolar affective disorder) where the risk of conventional corticosteroid treatment causing relapse is considered to be high; or
- 2.7 Relapse during pregnancy (where conventional corticosteroids are considered to be contraindicated).

Initiation – Collagenous and lymphocytic colitis (microscopic colitis)

Patient has a diagnosis of microscopic colitis (collagenous or lymphocytic colitis) by colonoscopy with biopsies.

Initiation – Gut Graft versus Host disease

Patient has gut Graft versus Host disease following allogenic bone marrow transplantation.

Initiation – non-cirrhotic autoimmune hepatitis

Re-assessment required after 6 months

All of the following:

1 Patient has autoimmune hepatitis*; and
2 Patient does not have cirrhosis; and
3 Any of the following:
- 3.1 Diabetes; or
- 3.2 Cushingoid habitus; or
- 3.3 Osteoporosis where there is significant risk of fracture; or
- 3.4 Severe acne following treatment with conventional corticosteroid therapy; or
- 3.5 History of severe psychiatric problems associated with corticosteroid treatment; or
- 3.6 History of major mental illness (such as bipolar affective disorder) where the risk of conventional corticosteroid treatment causing relapse is considered to be high; or
- 3.7 Relapse during pregnancy (where conventional corticosteroids are considered to be contraindicated); or
- 3.8 Adolescents with poor linear growth (where conventional corticosteroid use may limit further growth).

Note: Indications marked with * are unapproved indications.

Continuation – non-cirrhotic autoimmune hepatitis

Re-assessment required after 6 months

Treatment remains appropriate and the patient is benefitting from the treatment.

HYDROCORTISONE ACETATE			
Rectal foam 10%, CFC free (14 applications)	57.09	15 g	Colifoam
HYDROCORTISONE ACETATE WITH PRAMOXINE HYDROCHLORIDE			
Topical Aerosol foam, 1% with pramoxine hydrochloride 1%			
MESALAZINE

GLP-1 Agonists

DULAGLUTIDE – **Restricted** see terms below

Note: Not to be given in combination with another funded GLP-1 agonist or empagliflozin / empagliflozin with metformin hydrochloride unless receiving empagliflozin / empagliflozin with metformin hydrochloride for the treatment of heart failure.

⬇	Inj 1.5 mg per 0.5 ml prefilled pen	115.23	4	Trulicity

➥ **Restricted** (RS2128)

Initiation

Either:

1 For continuation use; or

2 All of the following:

2.1 Patient has type 2 diabetes; and

2.2 Target HbA1c (of 53 mmol/mol or less) has not been achieved despite the regular use of all of the following funded blood glucose lowering agents for a period of least 6 months, where clinically appropriate: empagliflozin, metformin, and vildagliptin; and

2.3 Any of the following:

2.3.1 Patient is Māori or any Pacific ethnicity*; or

2.3.2 Patient has pre-existing cardiovascular disease or risk equivalent (see note a)*; or

2.3.3 Patient has an absolute 5-year cardiovascular disease risk of 15% or greater according to a validated cardiovascular risk assessment calculator*; or

2.3.4 Patient has a high lifetime cardiovascular risk due to being diagnosed with type 2 diabetes during childhood or as a young adult*; or

2.3.5 Patient has diabetic kidney disease (see note b)*.

Notes: * Criteria intended to describe patients at high risk of cardiovascular or renal complications of diabetes.

a) Pre-existing cardiovascular disease or risk equivalent defined as: prior cardiovascular disease event (i.e. angina, myocardial infarction, percutaneous coronary intervention, coronary artery bypass grafting, transient ischaemic attack,

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

ischaemic stroke, peripheral vascular disease), congestive heart failure or familial hypercholesterolaemia.

b) Diabetic kidney disease defined as: persistent albuminuria (albumin:creatinine ratio greater than or equal to 3 mg/mmol, in at least two out of three samples over a 3-6 month period) and/or eGFR less than 60 mL/min/1.73m2 in the presence of diabetes, without alternative cause identified.

c) Funded GLP-1a treatment is not to be given in combination with (empagliflozin / empagliflozin with metformin hydrochloride) unless receiving (empagliflozin or empagliflozin in combination with metformin hydrochloride) for the treatment of heart failure.

LIRAGLUTIDE – **Restricted** see terms below

Note: Not to be given in combination with another funded GLP-1 agonist or empagliflozin / empagliflozin with metformin hydrochloride unless receiving empagliflozin / empagliflozin with metformin hydrochloride for the treatment of heart failure.

⬇	Inj 6 mg per ml, 3 ml prefilled pen	383.72	3	Victoza

➥ **Restricted** (RS2096)

Initiation

Either:

1 For continuation use; or

2 All of the following:

2.1 Patient has type 2 diabetes; and

2.2 Target HbA1c (of 53 mmol/mol or less) has not been achieved despite the regular use of all of the following funded blood glucose lowering agents for a period of least 6 months, where clinically appropriate: empagliflozin, metformin, and vildagliptin; and

2.3.5 Patient has diabetic kidney disease (see note b)*.

Notes: * Criteria intended to describe patients at high risk of cardiovascular or renal complications of diabetes.

a) Pre-existing cardiovascular disease or risk equivalent defined as: prior cardiovascular disease event (i.e. angina, myocardial infarction, percutaneous coronary intervention, coronary artery bypass grafting, transient ischaemic attack, ischaemic stroke, peripheral vascular disease), congestive heart failure or familial hypercholesterolaemia.

b) Diabetic kidney disease defined as: persistent albuminuria (albumin:creatinine ratio greater than or equal to 3 mg/mmol, in at least two out of three samples over a 3-6 month period) and/or eGFR less than 60 mL/min/1.73m2 in the presence of diabetes, without alternative cause identified.

c) Funded GLP-1a treatment is not to be given in combination with (empagliflozin / empagliflozin with metformin hydrochloride) unless receiving (empagliflozin or empagliflozin in combination with metformin hydrochloride) for the treatment of heart failure.

SGLT2 Inhibitors

➥ **Restricted** (RS2069)

Initiation – heart failure reduced ejection fraction

All of the following:

1 Patient has heart failure; and

2 Patient is in NYHA functional class II or III or IV; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 Either:
- 3.1 Patient has a documented left ventricular ejection fraction (LVEF) of less than or equal to 40%; or
- 3.2 An ECHO is not reasonably practicable, and in the opinion of the treating practitioner the patient would benefit from treatment; and

4 Patient is receiving concomitant optimal standard funded chronic heart failure treatment.

Initiation – Type 2 Diabetes

Any of the following:

1 For continuation use; or

2 Patient has previously had an initial approval for a GLP-1 agonist; or

3 All of the following:
- 3.1 Patient has type 2 diabetes; and
- 3.2 Any of the following:
  - 3.2.1 Patient is Māori or any Pacific ethnicity*; or
  - 3.2.2 Patient has pre-existing cardiovascular disease or risk equivalent (see note a)*; or
  - 3.2.3 Patient has an absolute 5-year cardiovascular disease risk of 15% or greater according to a validated cardiovascular risk assessment calculator*; or
  - 3.2.4 Patient has a high lifetime cardiovascular risk due to being diagnosed with type 2 diabetes during childhood or as a young adult*; or
  - 3.2.5 Patient has diabetic kidney disease (see note b)*; and
- 3.3 Target HbA1c (of 53 mmol/mol or less) has not been achieved despite the regular use of at least one blood-glucose lowering agent (e.g. metformin, vildagliptin, or insulin) for at least 3 months.

Notes: * Criteria intended to describe patients at high risk of cardiovascular or renal complications of diabetes.

a) Pre-existing cardiovascular disease or risk equivalent defined as: prior cardiovascular disease event (i.e. angina, myocardial infarction, percutaneous coronary intervention, coronary artery bypass grafting, transient ischaemic attack, ischaemic stroke, peripheral vascular disease), congestive heart failure or familial hypercholesterolaemia.

b) Diabetic kidney disease defined as: persistent albuminuria (albumin:creatinine ratio greater than or equal to 3 mg/mmol, in at least two out of three samples over a 3-6 month period) and/or eGFR less than 60 mL/min/1.73m2 in the presence of diabetes, without alternative cause.

c) Funded [empagliflozin / empagliflozin with metformin hydrochloride] treatment is not to be given in combination with a funded GLP-1 unless receiving (empagliflozin / empagliflozin with metformin hydrochloride] for the treatment of heart failure.

Initiation – Alagille syndrome or progressive familial intrahepatic cholestasis

Either:

1 Patient has been diagnosed with Alagille syndrome; or
2 Patient has progressive familial intrahepatic cholestasis.

Initiation – Chronic severe drug induced cholestatic liver injury

All of the following:

1 Patient has chronic severe drug induced cholestatic liver injury; and
2 Cholestatic liver injury not due to Total Parenteral Nutrition (TPN) use in adults; and
3 Treatment with ursodeoxycholic acid may prevent hospital admission or reduce duration of stay.

Initiation – Primary biliary cholangitis

Both:

1 Primary biliary cholangitis confirmed by antimitochondrial antibody titre (AMA) > 1:80, and raised cholestatic liver enzymes with or without raised serum IgM or, if AMA is negative by liver biopsy; and
2 Patient not requiring a liver transplant (bilirubin > 100 umol/l; decompensated cirrhosis.

Initiation – Pregnancy

Patient diagnosed with cholestasis of pregnancy.

Initiation – Haematological transplant

Both:

1 Patient at risk of veno-occlusive disease or has hepatic impairment and is undergoing conditioning treatment prior to allogenic stem cell or bone marrow transplantation; and
2 Treatment for up to 13 weeks.

Initiation – Total parenteral nutrition induced cholestasis

Both:

1 Paediatric patient has developed abnormal liver function as indicated on testing which is likely to be induced by TPN; and
2 Liver function has not improved with modifying the TPN composition.

Initiation – prevention of sinusoidal obstruction syndrome

The individual has leukaemia/lymphoma and requires prophylaxis for medications/therapies with a high risk of sinusoidal obstruction syndrome.

Opioid Receptor Antagonists - Peripheral

METHYLNALTREXONE BROMIDE – **Restricted** see terms below

⬇ Inj 12 mg per 0.6 ml vial ..... 36.00 — 1 — Relistor
246.00 — 7 — Relistor

➥ **Restricted** (RS2057)

Initiation – Opioid induced constipation

Both:

1 The patient is receiving palliative care; and
2 Either:
  2.1 Oral and rectal treatments for opioid induced constipation are ineffective; or
  2.2 Oral and rectal treatments for opioid induced constipation are unable to be tolerated.

Initiation – Opioid induced constipation outside of palliative care

Limited to 14 days treatment

All of the following:

1 Individual has opioid induced constipation; and
2 Oral and rectal treatments for opioid induced constipation, including bowel-cleansing preparations, are ineffective or inappropriate; and
3 Mechanical bowel obstruction has been excluded.

SODIUM PICOSULFATE – **Restricted** see terms on the next page

⬇ Oral soln 7.5 mg per ml ..... 7.40 — 30 ml — Dulcolax SP Drop

⬆ Item restricted (see ➥ above); ⬇ Item restricted (see ➥ below)
e.g. Brand indicates brand example only. It is not a contracted product.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1843)

Initiation

Both:

1 The patient is a child with problematic constipation despite an adequate trial of other oral pharmacotherapies including macrogol where practicable; and
2 The patient would otherwise require a high-volume bowel cleansing preparation.

Metabolic Disorder Agents

ALGLUCOSIDASE ALFA – **Restricted** see terms below

⬇ Inj 50 mg vial ..... 1,142.60 1 Myozyme

➥ **Restricted** (RS1793)

Initiation

Metabolic physician

Re-assessment required after 12 months

All of the following:

1 The patient is aged up to 24 months at the time of initial application and has been diagnosed with infantile Pompe disease; and
2 Any of the following:
  2.1 Diagnosis confirmed by documented deficiency of acid alpha-glucosidase by prenatal diagnosis using chorionic villus biopsies and/or cultured amniotic cells; or
  2.2 Documented deficiency of acid alpha-glucosidase, and urinary tetrasaccharide testing indicating a diagnostic elevation of glucose tetrasaccharides; or
  2.3 Documented deficiency of acid alpha-glucosidase, and documented molecular genetic testing indicating a disease-causing mutation in the acid alpha-glucosidase gene (GAA gene); or
  2.4 Documented urinary tetrasaccharide testing indicating a diagnostic elevation of glucose tetrasaccharides, and molecular genetic testing indicating a disease-causing mutation in the GAA gene; and
3 Patient has not required long-term invasive ventilation for respiratory failure prior to starting enzyme replacement therapy (ERT); and
4 Patient does not have another life-threatening or severe disease where the prognosis is unlikely to be influenced by ERT or might be reasonably expected to compromise a response to ERT; and
5 Alglucosidase alfa to be administered at doses no greater than 20 mg/kg every 2 weeks.

Continuation

Metabolic physician

Re-assessment required after 12 months

All of the following:

1 The treatment remains appropriate for the patient and the patient is benefiting from treatment; and
2 Alglucosidase alfa to be administered at doses no greater than 20 mg/kg every 2 weeks; and
3 Patient has not had severe infusion-related adverse reactions which were not preventable by appropriate pre-medication and/or adjustment of infusion rates; and
4 Patient has not developed another life threatening or severe disease where the long term prognosis is unlikely to be influenced by ERT; and
5 Patient has not developed another medical condition that might reasonably be expected to compromise a response to ERT; and
6 There is no evidence of life threatening progression of respiratory disease as evidenced by the needed for > 14 days of invasive ventilation; and
7 There is no evidence of new or progressive cardiomyopathy.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

1 Patient has phenylketonuria (PKU) and is pregnant or actively planning to become pregnant; and
2 Treatment with sapropterin is required to support management of PKU during pregnancy; and
3 Sapropterin to be administered at doses no greater than a total daily dose of 20 mg/kg; and
4 Sapropterin to be used alone or in combination with PKU dietary management; and
5 Total treatment duration with sapropterin will not exceed 22 months for each pregnancy (includes time for planning and becoming pregnant) and treatment will be stopped after delivery.

Continuation
Metabolic physician
Re-assessment required after 12 months
All of the following:

1 Either:
  1.1 Following the initial one-month approval, the patient has demonstrated an adequate response to a 2 to 4 week trial of sapropterin with a clinically appropriate reduction in phenylalanine levels to support management of PKU during pregnancy; or
  1.2 On subsequent renewal applications, the patient has previously demonstrated response to treatment with sapropterin and maintained adequate phenylalanine levels to support management of PKU during pregnancy; and
2 Any of the following:
  2.1 Patient continues to be pregnant and treatment with sapropterin will not continue after delivery; or
  2.2 Patient is actively planning a pregnancy and this is the first renewal for treatment with sapropterin; or
  2.3 Treatment with sapropterin is required for a second or subsequent pregnancy to support management of their PKU during pregnancy; and
3 Sapropterin to be administered at doses no greater than a total daily dose of 20 mg/kg; and
4 Sapropterin to be used alone or in combination with PKU dietary management; and
5 Total treatment duration with sapropterin will not exceed 22 months for each pregnancy (includes time for planning and becoming pregnant) and treatment will be stopped after delivery.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1897)

Initiation

Metabolic physician

Re-assessment required after 12 months

All of the following:

1 The patient has a diagnosis of symptomatic type 1 or type 3* Gaucher disease confirmed by the demonstration of specific deficiency of glucocerebrosidase in leukocytes or cultured skin fibroblasts, and genotypic analysis; and
2 Patient does not have another life-threatening or severe disease where the prognosis is unlikely to be influenced by enzyme replacement therapy (ERT) or the disease might be reasonably expected to compromise a response to ERT; and
3 Any of the following:
  3.1 Patient has haematological complications of Gaucher disease; or
  3.2 Patient has skeletal complications of Gaucher disease; or
  3.3 Patient has significant liver dysfunction or hepatomegaly attributable to Gaucher disease; or
  3.4 Patient has reduced vital capacity from clinically significant or progressive pulmonary disease due to Gaucher disease; or
  3.5 Patient is a child and has experienced growth failure with significant decrease in percentile linear growth over a 6-12 month period; and
4 Taliglucerase alfa is to be administered at a dose no greater than 30 unit/kg every other week rounded to the nearest whole vial (200 units).

Note: Indication marked with * is an unapproved indication

Continuation

Metabolic physician or any relevant practitioner on the recommendation of a metabolic physician

Re-assessment required after 3 years

All of the following:

1 Patient has demonstrated a symptomatic improvement and has maintained improvements in the main symptom or symptoms for which therapy was started; and
2 Patient has demonstrated a clinically objective improvement or no deterioration in haemoglobin levels, platelet counts and liver and spleen size; and
3 RRadiological (MRI) signs of bone activity performed at two years since initiation of treatment, and five yearly thereafter, demonstrate no deterioration shown by the MRI, compared with MRI taken immediately prior to commencement of therapy or adjusted dose; and
4 Patient has not developed another medical condition that might reasonably be expected to compromise a response to ERT; and
5 Patient is adherent with regular treatment and taliglucerase alfa is to be administered at a dose no greater than 30 unit/kg every other week rounded to the nearest whole vial (200 units).

TAURINE – **Restricted** see terms below

MULTIVITAMIN AND MINERAL SUPPLEMENT – **Restricted** see terms below
⬇ Cap ..... 23.35 180 Clinicians Multivit & Mineral Boost

➥ **Restricted** (RS1498)
Initiation
Limited to 3 months treatment
Both:

1 Patient was admitted to hospital with burns; and
2 Any of the following:
  2.1 Burn size is greater than 15% of total body surface area (BSA) for all types of burns; or
  2.2 Burn size is greater than 10% of BSA for mid-dermal or deep dermal burns; or
  2.3 Nutritional status prior to admission or dietary intake is poor.

MULTIVITAMIN RENAL – **Restricted** see terms below
⬇ Cap ..... 7.28 30 Clinicians Renal Vit
➥ **Restricted** (RS1499)
Initiation
Either:

1 The patient has chronic kidney disease and is receiving either peritoneal dialysis or haemodialysis; or
2 The patient has chronic kidney disease grade 5, defined as patient with an estimated glomerular filtration rate of < 15 ml/min/1.73m^2 body surface area (BSA).

➥ **Restricted** (RS1660)

Initiation – chronic renal failure

All of the following:

1 Patient in chronic renal failure; and
2 Haemoglobin is less than or equal to 100g/L; and
3 Any of the following:
  3.1 Both:
    3.1.1 Patient does not have diabetes mellitus; and
    3.1.2 Glomerular filtration rate is less than or equal to 30ml/min; or
  3.2 Both:
    3.2.1 Patient has diabetes mellitus; and
    3.2.2 Glomerular filtration rate is less than or equal to 45ml/min; or
  3.3 Patient is on haemodialysis or peritoneal dialysis.

Initiation – myelodysplasia*

Re-assessment required after 2 months

All of the following:

1 Patient has a confirmed diagnosis of myelodysplasia (MDS); and
2 Has had symptomatic anaemia with haemoglobin < 100g/L and is red cell transfusion-dependent; and
3 Patient has very low, low or intermediate risk MDS based on the WHO classification-based prognostic scoring system for myelodysplastic syndrome (WPSS); and
4 Other causes of anaemia such as B12 and folate deficiency have been excluded; and
5 Patient has a serum epoetin level of < 500 IU/L; and
6 The minimum necessary dose of epoetin would be used and will not exceed 80,000 iu per week.

Continuation – myelodysplasia*

Re-assessment required after 12 months

All of the following:

1 The patient's transfusion requirement continues to be reduced with epoetin treatment; and
2 Transformation to acute myeloid leukaemia has not occurred; and
3 The minimum necessary dose of epoetin would be used and will not exceed 80,000 iu per week.

Initiation – all other indications

Haematologist

For use in patients where blood transfusion is not a viable treatment alternative.

Note: Indications marked with * are unapproved indications

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

EPOETIN BETA – **Restricted** see terms below

Note: Epoetin beta is considered a Discretionary Variance Pharmaceutical for epoetin alfa.

⬇ Inj 2,000 iu in 0.3 ml syringe
⬇ Inj 3,000 iu in 0.3 ml syringe

➥ **Restricted** (RS1648)

Initiation – idiopathic thrombocytopenic purpura - post-splenectomy

Haematologist

Re-assessment required after 6 weeks

All of the following:

1 Patient has had a splenectomy; and
2 Two immunosuppressive therapies have been trialled and failed after therapy of 3 months each (or 1 month for rituximab); and
3 Any of the following:
  3.1 Patient has a platelet count of 20,000 to 30,000 platelets per microlitre and has evidence of significant mucocutaneous bleeding; or
  3.2 Patient has a platelet count of less than or equal to 20,000 platelets per microlitre and has evidence of active bleeding; or
  3.3 Patient has a platelet count of less than or equal to 10,000 platelets per microlitre.

Initiation – idiopathic thrombocytopenic purpura - preparation for splenectomy

Haematologist

Limited to 6 weeks treatment

The patient requires eltrombopag treatment as preparation for splenectomy.

Continuation – idiopathic thrombocytopenic purpura - post-splenectomy

Haematologist

Re-assessment required after 12 months

The patient has obtained a response (see Note) from treatment during the initial approval or subsequent renewal periods and further treatment is required.

Note: Response to treatment is defined as a platelet count of > 30,000 platelets per microlitre

Initiation – idiopathic thrombocytopenic purpura contraindicated to splenectomy

Haematologist

Re-assessment required after 3 months

All of the following:

1 Patient has a significant and well-documented contraindication to splenectomy for clinical reasons; and

continued…

⬆ Item restricted (see ➦ above); ⬇ Item restricted (see ➥ below)

e.g. Brand indicates brand example only. It is not a contracted product.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Two immunosuppressive therapies have been trialled and failed after therapy of 3 months each (or 1 month for rituximab); and
3 Either:
3.1 Patient has immune thrombocytopenic purpura* with a platelet count of less than or equal to 20,000 platelets per microliter; or
3.2 Patient has immune thrombocytopenic purpura* with a platelet count of 20,000 to 30,000 platelets per microlitre and significant mucocutaneous bleeding.

Continuation – idiopathic thrombocytopenic purpura contraindicated to splenectomy
Haematologist
Re-assessment required after 12 months
All of the following:

1 The patient's significant contraindication to splenectomy remains; and
2 The patient has obtained a response from treatment during the initial approval period; and
3 Patient has maintained a platelet count of at least 50,000 platelets per microlitre on treatment; and
4 Further treatment with eltrombopag is required to maintain response.

Initiation – severe aplastic anaemia
Haematologist
Re-assessment required after 3 months
Both:

1 Two immunosuppressive therapies have been trialled and failed after therapy of at least 3 months duration; and
2 Either:
2.1 Patient has severe aplastic anaemia with a platelet count of less than or equal to 20,000 platelets per microliter; or
2.2 Patient has severe aplastic anaemia with a platelet count of 20,000 to 30,000 platelets per microlitre and significant mucocutaneous bleeding.

Continuation – severe aplastic anaemia
Haematologist
Re-assessment required after 12 months
Both:

1 The patient has obtained a response from treatment of at least 20,000 platelets per microlitre above baseline during the initial approval period; and
2 Platelet transfusion independence for a minimum of 8 weeks during the initial approval period.

EMICIZUMAB – **Restricted** see terms below

⬇	Inj 30 mg in 1 ml vial	3,570.00	1	Hemlibra

➥ **Restricted** (RS1759)
Initiation
Any of the following:

1 For use in patients with acute coronary syndromes undergoing percutaneous coronary intervention; or
2 For use in patients with definite or strongly suspected intra-coronary thrombus on coronary angiography; or
3 For use in patients undergoing intra-cranial intervention.

LYSINE ACETYLSALICYLATE [LYSINE ASPRIN] – **Restricted** see terms below
⬇ Inj 500 mg *e.g. Aspegic*
➥ **Restricted** (RS1689)
Initiation
Both:

1 For use when an immediate antiplatelet effect is required prior to an urgent interventional neuro-radiology or interventional cardiology procedure; and
2 Administration of oral aspirin would delay the procedure.

TICAGRELOR – **Restricted** see terms below
⬇ Tab 90 mg – **5% DV Dec-24 to 2027** ..... 20.35 56 **Ticagrelor Sandoz**
➥ **Restricted** (RS1774)
Initiation
Restricted to treatment of acute coronary syndromes specifically for patients who have recently (within the last 60 days) been diagnosed with an ST-elevation or a non-ST-elevation acute coronary syndrome, and in whom fibrinolytic therapy has not been given in the last 24 hours and is not planned.
Initiation – thrombosis prevention neurological stenting
Re-assessment required after 12 months
Both:

1 Either:
  1.1 Patient has had a neurological stenting procedure* in the last 60 days; or
  1.2 Patient is about to have a neurological stenting procedure performed*; and
2 Either:
  2.1 Patient has demonstrated clopidogrel resistance using the P2Y12 (VerifyNow) assay or another appropriate platelet function assay and requires antiplatelet treatment with ticagrelor; or
  2.2 Either:
    2.2.1 Clopidogrel resistance has been demonstrated by the occurrence of a new cerebral ischemic event; or
    2.2.2 Clopidogrel resistance has been demonstrated by the occurrence of transient ischemic attack symptoms referable to the stent..

Continuation – thrombosis prevention neurological stenting
Re-assessment required after 12 months
Both:

1 Patient is continuing to benefit from treatment; and
2 Treatment continues to be clinically appropriate.

Initiation – Percutaneous coronary intervention with stent deployment
Limited to 12 months treatment
All of the following:

1 Patient has undergone percutaneous coronary intervention; and
2 Patient has had a stent deployed in the previous 4 weeks; and
3 Patient is clopidogrel-allergic**.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Initiation – Stent thrombosis

Patient has experienced cardiac stent thrombosis whilst on clopidogrel.

Initiation – Myocardial infarction

Limited to 1 week treatment

For short term use while in hospital following ST-elevated myocardial infarction.

Notes: Indications marked with * are unapproved indications.

Note: ** Clopidogrel allergy is defined as a history of anaphylaxis, urticaria, generalised rash or asthma (in non-asthmatic patients) developing soon after clopidogrel is started and is considered unlikely to be caused by any other treatment

Initiation – Autologous stem cell transplant

Haematologist

Limited to 3 days treatment

All of the following:

1 Patient is to undergo stem cell transplantation; and
2 Patient has not had a previous unsuccessful mobilisation attempt with plerixafor; and
3 Any of the following:
  3.1 Both:
    3.1.1 Patient is undergoing G-CSF mobilisation; and
    3.1.2 Either:
      3.1.2.1 Has a suboptimal peripheral blood CD34 count of less than or equal to 10×10^6/L on day 5 after 4 days of G-CSF treatment; or
      3.1.2.2 Efforts to collect > 1×10^6 CD34 cells/kg have failed after one apheresis procedure; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

3.2 Both:

3.2.1 Patient is undergoing chemotherapy and G-CSF mobilisation; and

3.2.2 Any of the following:

3.2.2.1 Both:

3.2.2.1.1 Has rising white blood cell counts of > 5 x 10^9/L; and

3.2.2.1.2 Has a suboptimal peripheral blood CD34 count of less than or equal to 10 x 10^6/L; or

3.2.2.2 Efforts to collect > 1 x 10^6 CD34 cells/kg have failed after one apheresis procedure; or

3.2.2.3 The peripheral blood CD34 cell counts are decreasing before the target has been received; or

3.3 A previous mobilisation attempt with G-CSF or G-CSF plus chemotherapy has failed.

Initiation – autosomal dominant polycystic kidney disease

Renal physician or any relevant practitioner on the recommendation of a renal physician

Re-assessment required after 12 months

All of the following:

1 Patient has a confirmed diagnosis of autosomal dominant polycystic kidney disease; and
2 Patient has an estimated glomerular filtration rate (eGFR) of greater than or equal to 25 ml/min/1.73 m^2 at treatment initiation; and
3 Either:
  3.1 Patient's disease is rapidly progressing, with a decline in eGFR of greater than or equal to 5 mL/min/1.73 m^2 within one-year; or
  3.2 Patient's disease is rapidly progressing, with an average decline in eGFR of greater than or equal to 2.5 mL/min/1.73 m^2 per year over a five-year period.

Continuation – autosomal dominant polycystic kidney disease

Renal physician or any relevant practitioner on the recommendation of a renal physician

Re-assessment required after 12 months

Both:

1 Patient has not developed end-stage renal disease, defined as an eGFR of less than 15 mL/min/1.73 m^2; and
2 Patient has not undergone a kidney transplant.

Initiation – cardiovascular disease risk

Either:

1 Both:
- 1.1 Patient is considered to be at risk of cardiovascular disease; and
- 1.2 Patient is Māori or any Pacific ethnicity; or

2 Both:
- 2.1 Patient has a calculated risk of cardiovascular disease of at least 15% over 5 years; and
- 2.2 LDL cholesterol has not reduced to less than 1.8 mmol/litre with treatment with the maximum tolerated dose of atorvastatin and/or simvastatin.

Initiation – familial hypercholesterolemia

Both:

1 Patient has familial hypercholesterolemia (defined as a Dutch Lipid Criteria score greater than or equal to 6); and
2 LDL cholesterol has not reduced to less than 1.8 mmol/litre with treatment with the maximum tolerated dose of atorvastatin and/or simvastatin.

Initiation – established cardiovascular disease

Both:

1 Any of the following:
- 1.1 Patient has proven coronary artery disease (CAD); or
- 1.2 Patient has proven peripheral artery disease (PAD); or
- 1.3 Patient has experienced an ischaemic stroke; and

2 LDL cholesterol has not reduced to less than 1.4 mmol/litre with treatment with the maximum tolerated dose of atorvastatin and/or simvastatin.

Initiation – recurrent major cardiovascular events

Both:

1 Patient has experienced a recurrent major cardiovascular event (defined as myocardial infarction, ischaemic stroke, coronary revascularisation, hospitalisation for unstable angina) in the last 2 years; and
2 LDL cholesterol has not reduced to less than 1.0 mmol/litre with treatment with the maximum tolerated dose of atorvastatin and/or simvastatin.

Limited to 6 months treatment

All of the following:

1 Patient has pulmonary arterial hypertension (PAH); and
2 PAH is in Group 1, 4 or 5 of the WHO (Venice 2003) clinical classifications; and
3 PAH is in New York Heart Association/World Health Organization (NYHA/WHO) functional class II, III or IV; and
4 Any of the following:
  4.1 All of the following:
    4.1.1 PAH has been confirmed by right heart catheterisation; and
    4.1.2 A mean pulmonary artery pressure (PAPm) greater than 20 mmHg (unless peri Fontan repair); and
    4.1.3 A pulmonary capillary wedge pressure (PCWP) less than or equal to 15 mmHg; and
    4.1.4 Pulmonary vascular resistance greater than 2 Wood Units or greater than 160 International Units (dyn s cm^{-5}); and
    4.1.5 Any of the following:
      4.1.5.1 PAH has been demonstrated to be non-responsive in vasoreactivity assessment using iloprost or nitric oxide, as defined in the 2022 ECS/ERS Guidelines for PAH (see note below for link to these guidelines) †; or
      4.1.5.2 Patient has not experienced an acceptable response to calcium antagonist treatment, according to a validated risk stratification tool**; or
      4.1.5.3 Patient has PAH other than idiopathic / heritable or drug-associated type; or
  4.2 Patient is a child with PAH secondary to congenital heart disease or PAH due to idiopathic, congenital or developmental lung disorders including chronic neonatal lung disease; or
  4.3 Patient has palliated single ventricle congenital heart disease and elevated pulmonary pressures or a major complication of the Fontan circulation requiring the minimising of pulmonary/venous filling pressures; and
5 Both:
  5.1 Ambrisentan is to be used as PAH monotherapy; and
  5.2 Any of the following:
    5.2.1 Patient has experienced intolerable side effects with both sildenafil and bosentan; or
    5.2.2 Patient has an absolute contraindication to sildenafil and an absolute or relative contraindication to bosentan (e.g. due to current use of a combined oral contraceptive or liver disease); or
    5.2.3 Patient is a child with idiopathic PAH or PAH secondary to congenital heart disease.

Initiation – PAH dual therapy

Respiratory specialist, cardiologist, rheumatologist or any relevant practitioner on the recommendation of a respiratory specialist, cardiologist or rheumatologist

Limited to 6 months treatment

All of the following:

1 Patient has pulmonary arterial hypertension (PAH); and
2 PAH is in Group 1, 4 or 5 of the WHO (Venice 2003) clinical classifications; and

complication of the Fontan circulation requiring the minimising of pulmonary/venous filling pressures; and

5 Both:

5.1 Ambrisentan is to be used as PAH triple therapy; and

5.2 Any of the following:

5.2.1 Patient is on the lung transplant list; or

5.2.2 Both:

5.2.2.1 Patient is presenting in NYHA/WHO functional class IV; and

5.2.2.2 Patient has an absolute or relative contraindication to bosentan (e.g. due to current use of a combined oral contraceptive or liver disease); or

5.2.3 Both:

5.2.3.1 Patient has tried PAH dual therapy for at least three months and remains in an unacceptable risk category according to a validated risk stratification tool**; and

5.2.3.2 Patient does not have major life-threatening comorbidities and triple therapy is not being used in a palliative scenario.

Continuation

Respiratory specialist, cardiologist, rheumatologist or any relevant practitioner on the recommendation of a respiratory specialist, cardiologist or rheumatologist

Re-assessment required after 2 years

The patient is continuing to derive benefit from ambrisentan treatment according to a validated PAH risk stratification tool**.

Notes: † The European Respiratory Journal Guidelines can be found here: 2022 ECS/ERS Guidelines for the diagnosis and treatment of pulmonary hypertension PAH

** the requirement to use a validated risk stratification tool to determine insufficient response applies to adults. Determining insufficient response in children does not require use of a validated PAH risk stratification tool, where currently no such validated tools exist for PAH risk stratification in children.

  5.1 Iloprost is to be used as PAH monotherapy; and
  5.2 Either:
    5.2.1 Patient has experienced intolerable side effects on sildenafil and both the funded endothelin receptor antagonists (i.e. both bosentan and ambrisentan); or
    5.2.2 Patient has an absolute contraindication to sildenafil and an absolute or relative contraindication to endothelin receptor antagonists.

Initiation – PAH dual therapy

Respiratory specialist, cardiologist, rheumatologist or any relevant practitioner on the recommendation of a respiratory specialist, cardiologist or rheumatologist

Limited to 6 months treatment

All of the following:

1 Patient has pulmonary arterial hypertension (PAH); and
2 PAH is in Group 1, 4 or 5 of the WHO (Venice 2003) clinical classifications; and
3 PAH is in New York Heart Association/World Health Organization (NYHA/WHO) functional class II, III or IV; and
4 Any of the following:
  4.1 All of the following:
    4.1.1 PAH has been confirmed by right heart catheterisation; and
    4.1.2 A mean pulmonary artery pressure (PAPm) greater than 20 mmHg (unless peri Fontan repair); and
    4.1.3 A pulmonary capillary wedge pressure (PCWP) less than or equal to 15 mmHg; and

4.1.4 A pulmonary vascular resistance greater than 2 Wood Units or greater than 160 International Units (dyn s cm^{-5}); and
4.1.5 Any of the following:
4.1.5.1 PAH has been demonstrated to be non-responsive in vasoreactivity assessment using iloprost or nitric oxide, as defined in the 2022 ECS/ERS Guidelines for PAH (see note below for link to these guidelines) † ; or
4.1.5.2 Patient has not experienced an acceptable response to calcium antagonist treatment, according to a validated risk stratification tool**; or
4.1.5.3 Patient has PAH other than idiopathic / heritable or drug-associated type; or
4.2 Patient is a child with PAH secondary to congenital heart disease or PAH due to idiopathic, congenital or developmental lung disorders including severe chronic neonatal lung disease; or
4.3 Patient has palliated single ventricle congenital heart disease and elevated pulmonary pressures or a major complication of the Fontan circulation requiring the minimising of pulmonary/venous filling pressures ; and
5 All of the following:
5.1 Iloprost is to be used as PAH dual therapy with either sildenafil or an endothelin receptor antagonist; and
5.2 Either:
5.2.1 Patient has an absolute contraindication to or has experienced intolerable side effects on sildenafil; or
5.2.2 Patient has an absolute or relative contraindication to or experienced intolerable side effects with a funded endothelin receptor antagonist; and
5.3 Either:
5.3.1 Patient has tried a PAH monotherapy for at least three months and remains in an unacceptable risk category according to a validated risk stratification tool**; or
5.3.2 Patient is presenting in NYHA/WHO functional class III or IV, and in the opinion of the treating clinician would benefit from initial dual therapy.

Initiation – PAH triple therapy
Respiratory specialist, cardiologist, rheumatologist or any relevant practitioner on the recommendation of a respiratory specialist, cardiologist or rheumatologist
Limited to 6 months treatment
All of the following:
1 Patient has pulmonary arterial hypertension (PAH); and
2 PAH is in Group 1, 4 or 5 of the WHO (Venice 2003) clinical classifications; and
3 PAH is in New York Heart Association/World Health Organization (NYHA/WHO) functional class II, III or IV; and
4 Any of the following:
4.1 All of the following:
4.1.1 PAH has been confirmed by right heart catheterisation; and
4.1.2 A mean pulmonary artery pressure (PAPm) greater than 20 mmHg (unless peri Fontan repair); and
4.1.3 A pulmonary capillary wedge pressure (PCWP) less than or equal to 15 mmHg; and
4.1.4 A pulmonary vascular resistance greater than 2 Wood Units or greater than 160 International Units (dyn s cm^{-5}); and
4.1.5 Any of the following:
4.1.5.1 PAH has been demonstrated to be non-responsive in vasoreactivity assessment using iloprost or nitric oxide, as defined in the 2022 ECS/ERS Guidelines for PAH (see note below for link to these guidelines) † ; or
4.1.5.2 Patient has not experienced an acceptable response to calcium antagonist treatment, according to a validated risk stratification tool**; or

developmental lung disorders including severe chronic neonatal lung disease; or

4.3 Patient has palliated single ventricle congenital heart disease and elevated pulmonary pressures or a major complication of the Fontan circulation requiring the minimising of pulmonary/venous filling pressures ; and

5 Both:

5.1 Iloprost is to be used as PAH triple therapy; and

5.2 Any of the following:

5.2.1 Patient is on the lung transplant list; or

5.2.2 Patient is presenting in NYHA/WHO functional class IV; or

5.2.3 Both:

5.2.3.1 Patient has tried PAH dual therapy for at least three months and has not experienced an acceptable response to treatment according to a validated risk stratification tool**; and

5.2.3.2 Patient does not have major life-threatening comorbidities and triple therapy is not being used in a palliative scenario.

Continuation

Respiratory specialist, cardiologist, rheumatologist or any relevant practitioner on the recommendation of a respiratory specialist, cardiologist or rheumatologist

Re-assessment required after 2 years

Patient is continuing to derive benefit from iloprost treatment according to a validated PAH risk stratification tool.

Notes: † The European Respiratory Journal Guidelines can be found here: 2022 ECS/ERS Guidelines for the diagnosis and treatment of pulmonary hypertension PAH

** the requirement to use a validated risk stratification tool to determine insufficient response applies to adults. Determining insufficient response in children does not require use of a validated PAH risk stratification tool, where currently no such validated tools exist for PAH risk stratification in children.

➥ **Restricted** (RS1931)
Initiation – parathyroid carcinoma or calciphylaxis
Nephrologist or endocrinologist
Re-assessment required after 6 months
Either:

1 All of the following:
- 1.1 The patient has been diagnosed with a parathyroid carcinoma (see Note); and
- 1.2 The patient has persistent hypercalcaemia (serum calcium greater than or equal to 3 mmol/L) despite previous first-line treatments including sodium thiosulfate (where appropriate) and bisphosphonates; and
- 1.3 The patient is symptomatic; or

2 All of the following:
- 2.1 The patient has been diagnosed with calciphylaxis (calcific uraemic arteriolopathy); and
- 2.2 The patient has symptomatic (e.g. painful skin ulcers) hypercalcaemia (serum calcium greater than or equal to 3 mmol/L); and
- 2.3 The patient's condition has not responded to previous first-line treatments including bisphosphonates and sodium

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

thiosulfate.

Continuation – parathyroid carcinoma or calciphylaxis

Nephrologist or endocrinologist

Both:

1 The patient's serum calcium level has fallen to < 3mmol/L; and
2 The patient has experienced clinically significant symptom improvement.

Note: This does not include parathyroid adenomas unless these have become malignant.

Initiation – primary hyperparathyroidism

All of the following:

1 Patient has primary hyperparathyroidism; and
2 Either:
  2.1 Patient has hypercalcaemia of more than 3 mmol/L with or without symptoms; or
  2.2 Patient has hypercalcaemia of more than 2.85 mmol/L with symptoms; and
3 Surgery is not feasible or has failed; and
4 Patient has other comorbidities, severe bone pain, or calciphylaxis.

Initiation – secondary or tertiary hyperparathyroidism

Re-assessment required after 6 months

All of the following:

1 Either:
  1.1 Patient has tertiary hyperparathyroidism and markedly elevated parathyroid hormone (PTH) with hypercalcaemia; or
  1.2 Patient has symptomatic secondary hyperparathyroidism and elevated PTH; and
2 Patient is on renal replacement therapy; and
3 Any of the following:
  3.1 Residual parathyroid tissue has not been localised despite repeat unsuccessful parathyroid explorations; or
  3.2 Parathyroid tissue is surgically inaccessible; or
  3.3 Parathyroid surgery is not feasible.

Continuation – secondary or tertiary hyperparathyroidism

Re-assessment required after 12 months

Either:

1 The patient has had a kidney transplant, and following a treatment free interval of at least 12 weeks a clinically acceptable parathyroid hormone (PTH) level to support ongoing cessation of treatment has not been reached; or
2 The patient has not received a kidney transplant and trial of withdrawal of cinacalcet is clinically inappropriate.

Initiation – growth hormone deficiency in children

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

Either:

1 Growth hormone deficiency causing symptomatic hypoglycaemia, or with other significant growth hormone deficient sequelae (e.g. cardiomyopathy, hepatic dysfunction) and diagnosed with GH < 5 mcg/l on at least two random blood samples in the first 2 weeks of life, or from samples during established hypoglycaemia (whole blood glucose < 2 mmol/l using a laboratory device); or

2 All of the following:

2.1 Height velocity < 25th percentile for age; and adjusted for bone age/pubertal status if appropriate over 6 or 12 months using the standards of Tanner and Davies (1985); and

2.2 A current bone age is < 14 years (female patients) or < 16 years (male patients); and

2.3 Peak growth hormone value of < 5.0 mcg per litre in response to two different growth hormone stimulation tests. In children who are 5 years or older, GH testing with sex steroid priming is required; and

2.4 If the patient has been treated for a malignancy, they should be disease free for at least one year based upon follow-up laboratory and radiological imaging appropriate for the malignancy, unless there are strong medical reasons why this is either not necessary or appropriate; and

2.5 Appropriate imaging of the pituitary gland has been obtained.

Continuation – growth hormone deficiency in children

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

All of the following:

1 A current bone age is 14 years or under (female patients) or 16 years or under (male patients); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Height velocity is greater than or equal to 25th percentile for age (adjusted for bone age/pubertal status if appropriate) while on growth hormone treatment, as calculated over six months using the standards of Tanner and Davis (1985); and
3 Height velocity is greater than or equal to 2.0 cm per year, as calculated over 6 months; and
4 No serious adverse effect that the patients specialist considers is likely to be attributable to growth hormone treatment has occurred; and
5 No malignancy has developed since starting growth hormone.

Initiation – Turner syndrome
Endocrinologist or paediatric endocrinologist
Re-assessment required after 12 months
All of the following:

1 The patient has a post-natal genotype confirming Turner Syndrome; and
2 Height velocity is < 25th percentile over 6-12 months using the standards of Tanner and Davies (1985); and
3 A current bone age is < 14 years.

Continuation – Turner syndrome
Endocrinologist or paediatric endocrinologist
Re-assessment required after 12 months
All of the following:

1 Height velocity greater than or equal to 50th percentile for age (while on growth hormone calculated over 6 to 12 months using the Ranke's Turner Syndrome growth velocity charts); and
2 Height velocity is greater than or equal to 2 cm per year, calculated over six months; and
3 A current bone age is 14 years or under; and
4 No serious adverse effect that the specialist considers is likely to be attributable to growth hormone treatment has occurred; and
5 No malignancy has developed since starting growth hormone.

Initiation – short stature without growth hormone deficiency
Endocrinologist or paediatric endocrinologist
Re-assessment required after 12 months
All of the following:

1 The patient's height is more than 3 standard deviations below the mean for age or for bone age if there is marked growth acceleration or delay; and
2 Height velocity is < 25th percentile for age (adjusted for bone age/pubertal status if appropriate), as calculated over 6 to 12 months using the standards of Tanner and Davies(1985); and
3 A current bone age is < 14 years (female patients) or < 16 years (male patients); and
4 The patient does not have severe chronic disease (including malignancy or recognized severe skeletal dysplasia) and is not receiving medications known to impair height velocity.

Continuation – short stature without growth hormone deficiency
Endocrinologist or paediatric endocrinologist
Re-assessment required after 12 months
All of the following:

1 Height velocity is greater than or equal to 50th percentile (adjusted for bone age/pubertal status if appropriate) as calculated over 6 to 12 months using the standards of Tanner and Davies (1985); and
2 Height velocity is greater than or equal to 2 cm per year as calculated over six months; and
3 Current bone age is 14 years or under (female patients) or 16 years or under (male patients); and
4 No serious adverse effect that the patient's specialist considers is likely to be attributable to growth hormone treatment has occurred.

Initiation – short stature due to chronic renal insufficiency
Endocrinologist, paediatric endocrinologist or renal physician on the recommendation of a endocrinologist or paediatric

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

endocrinologist

Re-assessment required after 12 months

All of the following:

1 The patient's height is more than 2 standard deviations below the mean; and
2 Height velocity is < 25th percentile (adjusted for bone age/pubertal status if appropriate) as calculated over 6 to 12 months using the standards of Tanner and Davies (1985); and
3 A current bone age is to 14 years or under (female patients) or to 16 years or under (male patients); and
4 The patient is metabolically stable, has no evidence of metabolic bone disease and absence of any other severe chronic disease; and
5 The patient is under the supervision of a specialist with expertise in renal medicine; and
6 Either:
    6.1 The patient has a GFR less than or equal to 30 ml/min/1.73 m^2 as measured by the Schwartz method (Height(cm)/plasma creatinine (umol/l × 40 = corrected GFR (ml/min/1.73 m^2) in a child who may or may not be receiving dialysis; or
    6.2 The patient has received a renal transplant and has received < 5mg/ m^2 /day of prednisone or equivalent for at least 6 months.

Continuation – short stature due to chronic renal insufficiency

Endocrinologist, paediatric endocrinologist or renal physician on the recommendation of a endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

All of the following:

1 Height velocity is greater than or equal to 50th percentile (adjusted for bone age/pubertal status if appropriate) as calculated over 6 to 12 months using the standards of Tanner and Davies (1985); and
2 Height velocity is greater than or equal to 2 cm per year as calculated over six months; and
3 A current bone age is 14 years or under (female patients) or 16 years or under (male patients); and
4 No serious adverse effect that the patients specialist considers is likely to be attributable to growth hormone has occurred; and
5 No malignancy has developed after growth hormone therapy was commenced; and
6 The patient has not experienced significant biochemical or metabolic deterioration confirmed by diagnostic results; and
7 The patient has not received renal transplantation since starting growth hormone treatment; and
8 If the patient requires transplantation, growth hormone prescription should cease before transplantation and a new application should be made after transplantation based on the above criteria.

Initiation – Prader-Willi syndrome

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

All of the following:

1 The patient has a diagnosis of Prader-Willi syndrome that has been confirmed by genetic testing or clinical scoring criteria; and
2 The patient is aged six months or older; and
3 A current bone age is < 14 years (female patients) or < 16 years (male patients); and
4 Sleep studies or overnight oximetry have been performed and there is no obstructive sleep disorder requiring treatment, or if an obstructive sleep disorder is found, it has been adequately treated under the care of a paediatric respiratory physician and/or ENT surgeon; and
5 Either:
    5.1 Both:
        5.1.1 The patient is aged two years or older; and
        5.1.2 There is no evidence of type II diabetes or uncontrolled obesity defined by BMI that has increased by greater than or equal to 0.5 standard deviations in the preceding 12 months; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

5.2 The patient is aged between six months and two years and a thorough upper airway assessment is planned to be undertaken prior to treatment commencement and at six to 12 weeks following treatment initiation.

Continuation – Prader-Willi syndrome

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

All of the following:

1 Height velocity is greater than or equal to 50th percentile (adjusted for bone age/pubertal status if appropriate) as calculated over 6 to 12 months using the standards of Tanner and Davies (1985); and
2 Height velocity is greater than or equal to 2 cm per year as calculated over six months; and
3 A current bone age is 14 years or under (female patients) or 16 years or under (male patients); and
4 No serious adverse effect that the patient's specialist con siders is likely to be attributable to growth hormone treatment has occurred; and
5 No malignancy has developed after growth hormone therapy was commenced; and
6 The patient has not developed type II diabetes or uncontrolled obesity as defined by BMI that has increased by greater than or equal to 0.5 standard deviations in the preceding 12 months.

Initiation – adults and adolescents

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

All of the following:

1 The patient has a medical condition that is known to cause growth hormone deficiency (e.g. surgical removal of the pituitary for treatment of a pituitary tumour); and
2 The patient has undergone appropriate treatment of other hormonal deficiencies and psychological illnesses; and
3 The patient has severe growth hormone deficiency (see notes); and
4 The patient's serum IGF-I is more than 1 standard deviation below the mean for age and sex; and
5 The patient has poor quality of life, as defined by a score of 16 or more using the disease-specific quality of life questionnaire for adult growth hormone deficiency (QoL-AGHDA®).

Notes: For the purposes of adults and adolescents, severe growth hormone deficiency is defined as a peak serum growth hormone level of less than or equal to 3 mcg per litre during an adequately performed insulin tolerance test (ITT) or glucagon stimulation test.

Patients with one or more additional anterior pituitary hormone deficiencies and a known structural pituitary lesion only require one test. Patients with isolated growth hormone deficiency require two growth hormone stimulation tests, of which, one should be ITT unless otherwise contraindicated. Where an additional test is required, an arginine provocation test can be used with a peak serum growth hormone level of less than or equal to 0.4 mcg per litre.

The dose of somatropin should be started at 0.2 mg daily and be titrated by 0.1 mg monthly until it is within 1 standard deviation of the mean normal value for age and sex; and

The dose of somatropin not to exceed 0.7 mg per day for male patients, or 1 mg per day for female patients.

At the commencement of treatment for hypopituitarism, patients must be monitored for any required adjustment in replacement doses of corticosteroid and levothyroxine.

Continuation – adults and adolescents

Endocrinologist or paediatric endocrinologist

Re-assessment required after 12 months

Any of the following:

1 All of the following:
  1.1 The patient has been treated with somatropin for < 12 months; and
  1.2 There has been an improvement in the Quality of Life Assessment defined as a reduction of at least 8 points on the Quality of Life Assessment of Growth Hormone Deficiency in Adults (QoL-AGHDA®) score from baseline; and
  1.3 Serum IGF-I levels have increased to within ±1SD of the mean of the normal range for age and sex; and
  1.4 The dose of somatropin does not exceed 0.7 mg per day for male patients, or 1 mg per day for female patients; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 All of the following:

2.1 The patient has been treated with somatropin for more than 12 months; and

2.2 The patient has not had a deterioration in Quality of Life defined as a 6 point or greater increase from their lowest QoL-AGHDA® score on treatment (other than due to obvious external factors such as external stressors); and

2.3 Serum IGF-I levels have continued to be maintained within ±1SD of the mean of the normal range for age and sex (other than for obvious external factors); and

2.4 The dose of somatropin has not exceeded 0.7 mg per day for male patients or 1 mg per day for female patients; or

3 All of the following:

3.1 The patient has had a Special Authority approval for somatropin for childhood deficiency in children and no longer meets the renewal criteria under this indication; and

3.2 The patient has undergone appropriate treatment of other hormonal deficiencies and psychological illnesses; and

3.3 The patient has severe growth hormone deficiency (see notes); and

3.4 The patient's serum IGF-I is more than 1 standard deviation below the mean for age and sex; and

3.5 The patient has poor quality of life, as defined by a score of 16 or more using the disease-specific quality of life questionnaire for adult growth hormone deficiency (QoL-AGHDA®).

Notes: For the purposes of adults and adolescents, severe growth hormone deficiency is defined as a peak serum growth hormone level of less than or equal to 3 mcg per litre during an adequately performed insulin tolerance test (ITT) or glucagon stimulation test.

Patients with one or more additional anterior pituitary hormone deficiencies and a known structural pituitary lesion only require one test. Patients with isolated growth hormone deficiency require two growth hormone stimulation tests, of which, one should be ITT unless otherwise contraindicated. Where an additional test is required, an arginine provocation test can be used with a peak serum growth hormone level of less than or equal to 0.4 mcg per litre.

The dose of somatropin should be started at 0.2 mg daily and be titrated by 0.1 mg monthly until the serum IGF-I is within 1 standard deviation of the mean normal value for age and sex; and

The dose of somatropin not to exceed 0.7 mg per day for male patients, or 1 mg per day for female patients.

At the commencement of treatment for hypopituitarism, patients must be monitored for any required adjustment in replacement doses of corticosteroid and levothyroxine.

Initiation – non-cystic fibrosis bronchiectasis*

Respiratory specialist or paediatrician

Re-assessment required after 12 months

All of the following:

1 For prophylaxis of exacerbations of non-cystic fibrosis bronchiectasis*; and
2 Patient is aged 18 and under; and
3 Either:
  3.1 Patient has had 3 or more exacerbations of their bronchiectasis, within a 12 month period; or
  3.2 Patient has had 3 acute admissions to hospital for treatment of infective respiratory exacerbations within a 12 month period.

Note: Indications marked with * are unapproved indications. A maximum of 24 months of azithromycin treatment for non-cystic fibrosis will be subsidised in the community.

Continuation – non-cystic fibrosis bronchiectasis*

Respiratory specialist or paediatrician

Re-assessment required after 12 months

All of the following:

1 The patient has completed 12 months of azithromycin treatment for non-cystic fibrosis bronchiectasis; and
2 Following initial 12 months of treatment, the patient has not received any further azithromycin treatment for non-cystic fibrosis bronchiectasis for a further 12 months, unless considered clinically inappropriate to stop treatment; and
3 The patient will not receive more than a total of 24 months' azithromycin cumulative treatment (see note).

Note: Indications marked with * are unapproved indications. A maximum of 24 months of azithromycin treatment for non-cystic fibrosis will be subsidised in the community.

Initiation – other indications

Re-assessment required after 5 days

For any other condition.

Continuation – other indications

Re-assessment required after 5 days

For any other condition.

1.1 Active tuberculosis; and
1.2 Any of the following:
1.2.1 Documented resistance to one or more first-line medications; or
1.2.2 Suspected resistance to one or more first-line medications (tuberculosis assumed to be contracted in an area with known resistance), as part of regimen containing other second-line agents; or
1.2.3 Impaired visual acuity (considered to preclude ethambutol use); or
1.2.4 Significant pre-existing liver disease or hepatotoxicity from tuberculosis medications; or
1.2.5 Significant documented intolerance and/or side effects following a reasonable trial of first-line medications; or
2 Mycobacterium avium-intracellulare complex not responding to other therapy or where such therapy is contraindicated; or
3 Patient is under five years of age and has had close contact with a confirmed multi-drug resistant tuberculosis case.

Initiation – Pneumonia
Infectious disease specialist or clinical microbiologist
Either:
1 Immunocompromised patient with pneumonia that is unresponsive to first-line treatment; or
2 Pneumococcal pneumonia or other invasive pneumococcal disease highly resistant to other antibiotics.

Initiation – Penetrating eye injury
Ophthalmologist
Five days treatment for patients requiring prophylaxis following a penetrating eye injury.

Initiation – Mycoplasma genitalium
All of the following:
1 Has nucleic acid amplification test (NAAT) confirmed Mycoplasma genitalium and is symptomatic; and
2 Either:
2.1 Has tried and failed to clear infection using azithromycin; or
2.2 Has laboratory confirmed azithromycin resistance; and
3 Treatment is only for 7 days.

Initiation – severe delayed beta-lactam allergy
Infectious disease specialist or clinical microbiologist
Individual has a history of severe delayed beta-lactam allergy.

Continuation
Haematologist or infectious disease specialist
Re-assessment required after 6 weeks
Both:

1 Patient has previously received posaconazole prophylaxis during remission induction therapy; and
2 Any of the following:
  2.1 Patient is to be treated with high dose remission re-induction therapy; or
  2.2 Patient is to be treated with high dose consolidation therapy; or
  2.3 Patient is receiving a high risk stem cell transplant.

Initiation – Invasive fungal infection prophylaxis
Any relevant practitioner
Re-assessment required after 6 months
Both:

1 The patient is at risk of invasive fungal infection; and
2 Either:
  2.1 Posaconazole is prescribed by, or recommended by a haematologist, transplant physician, infectious disease specialist, paediatric haematologist or paediatric oncologist; or
  2.2 Prescribing posaconazole is in accordance with a protocol or guideline that has been endorsed by the Health New Zealand - Te Whatu Ora Hospital in the specific settings where there is a greater than 10% risk of invasive fungal infection (IFI).

Continuation – Invasive fungal infection prophylaxis
Any relevant practitioner
Re-assessment required after 6 months
Both:

1 The patient is at risk of invasive fungal infection; and
2 Either:
  2.1 Posaconazole is prescribed by, or recommended by a haematologist, transplant physician, infectious disease specialist, paediatric haematologist or paediatric oncologist; or

Antiretrovirals

Non-Nucleoside Reverse Transcriptase Inhibitors

➦ **Restricted** (RS1898)
Initiation – Confirmed HIV
Patient has confirmed HIV infection.
Initiation – Prevention of maternal transmission
Either:
1 Prevention of maternal foetal transmission; or
2 Treatment of the newborn for up to eight weeks.
Initiation – Post-exposure prophylaxis following exposure to HIV
Both:
1 Treatment course to be initiated within 72 hours post exposure; and
2 Any of the following:
2.1 Patient has had condomless anal intercourse or receptive vaginal intercourse with a known HIV positive person with an unknown or detectable viral load greater than 200 copies per ml; or
2.2 Patient has shared intravenous injecting equipment with a known HIV positive person; or
2.3 Patient has had non-consensual intercourse and the clinician considers that the risk assessment indicates prophylaxis is required; or
2.4 Patient has had condomless anal intercourse with a person from a high HIV prevalence country or risk group whose HIV status is unknown.

Note: Refer to local health pathways or the Australasian Society for HIV, Viral Hepatitis and Sexual Health Medicine clinical guidelines for PEP (https://www.ashm.org.au/hiv/hiv-management/pep/).
Initiation – Percutaneous exposure
Patient has percutaneous exposure to blood known to be HIV positive.

Initiation – Transplant cytomegalovirus prophylaxis

Re-assessment required after 3 months

Patient has undergone a solid organ transplant and requires valganciclovir for CMV prophylaxis.

Continuation – Transplant cytomegalovirus prophylaxis

Re-assessment required after 3 months

Either:

1 Both:

1.1 Patient has undergone a solid organ transplant and received anti-thymocyte globulin and requires valganciclovir therapy for CMV prophylaxis; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2 Patient is to receive a maximum of 90 days of valganciclovir prophylaxis following anti-thymocyte globulin; or

2 Both:

2.1 Patient has received pulse methylprednisolone for acute rejection and requires further valganciclovir therapy for CMV prophylaxis; and

2.2 Patient is to receive a maximum of 90 days of valganciclovir prophylaxis following pulse methylprednisolone.

Initiation – Lung transplant cytomegalovirus prophylaxis

Relevant specialist

Limited to 12 months treatment

All of the following:

1 Patient has undergone a lung transplant; and

2 Either:

2.1 The donor was cytomegalovirus positive and the patient is cytomegalovirus negative; or

2.2 The recipient is cytomegalovirus positive; and

3 Patient has a high risk of CMV disease.

Initiation – Cytomegalovirus in immunocompromised patients

Both:

1 Patient is immunocompromised; and

2 Any of the following:

2.1 Patient has cytomegalovirus syndrome or tissue invasive disease; or

2.2 Patient has rapidly rising plasma CMV DNA in absence of disease; or

2.3 Patient has cytomegalovirus retinitis.

HIV Prophylaxis and Treatment

EMTRICITABINE WITH TENOFOVIR DISOPROXIL – **Restricted** see terms below

⬇ Tab 200 mg with tenofovir disoproxil 245 mg (300 mg as a maleate) –

(Teva Tab 200 mg with tenofovir disoproxil 245 mg (300.6 mg as a succinate) to be delisted 1 August 2025)

➥ **Restricted** (RS1902)

Initiation – Confirmed HIV

Patient has confirmed HIV infection.

Initiation – Prevention of maternal transmission

Either:

1 Prevention of maternal foetal transmission; or

2 Treatment of the newborn for up to eight weeks.

Initiation – Post-exposure prophylaxis following non-occupational exposure to HIV

Both:

1 Treatment course to be initiated within 72 hours post exposure; and

2 Any of the following:

2.1 Patient has had unprotected receptive anal intercourse with a known HIV positive person; or

2.2 Patient has shared intravenous injecting equipment with a known HIV positive person; or

2.3 Patient has had non-consensual intercourse and the clinician considers that the risk assessment indicates prophylaxis is required.

Initiation – Percutaneous exposure

Patient has percutaneous exposure to blood known to be HIV positive.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Initiation – Pre-exposure prophylaxis

Re-assessment required after 24 months

Both:

1 Patient has tested HIV negative, does not have signs or symptoms of acute HIV infection and has been assessed for HIV seroconversion; and

2 The Practitioner considers the patient is at elevated risk of HIV exposure and use of PrEP is clinically appropriate.

Note: Refer to local health pathways or the Australasian Society for HIV, Viral Hepatitis and Sexual Health Medicine clinical guidelines (https://ashm.org.au/HIV/PrEP/)

Continuation – Pre-exposure prophylaxis

Re-assessment required after 24 months

Both:

1 Patient has tested HIV negative, does not have signs or symptoms of acute HIV infection and has been assessed for HIV seroconversion; and

2 The Practitioner considers the patient is at elevated risk of HIV exposure and use of PrEP is clinically appropriate.

Note: Refer to local health pathways or the Australasian Society for HIV, Viral Hepatitis and Sexual Health Medicine clinical guidelines (https://ashm.org.au/HIV/PrEP/)

Influenza

OSELTAMIVIR – **Restricted** see terms below

Note: The restriction on the use of oseltamivir to hospitalised patients means that supply into the community for a new course is not permitted. Supply of a part original pack on discharge where initiated as a hospital inpatient is permitted.

⬇ Tab 75 mg

⬇ Powder for oral suspension 6 mg per ml

➥ **Restricted** (RS1307)

Initiation

Either:

1 Only for hospitalised patient with known or suspected influenza; or

2 For prophylaxis of influenza in hospitalised patients as part of a Health NZ Hospital approved infections control plan.

ZANAMIVIR

Note: The restriction on the use of zanamivir to hospitalised patients means that supply into the community for a new course is not permitted. Supply of a part original pack on discharge where initiated as a hospital inpatient is permitted.

⬇ Powder for inhalation 5 mg ..... 37.38 20 dose Relenza Rotadisk

➥ **Restricted** (RS1369)

Initiation

Either:

1 Only for hospitalised patient with known or suspected influenza; or

2 For prophylaxis of influenza in hospitalised patients as part of a Health NZ Hospital approved infections control plan.

COVID-19 Treatments

NIRMATRELVIR WITH RITONAVIR – **Restricted** see terms below

⬇ Tab 150 mg with ritonavir 100 mg ..... 0.00 30 Paxlovid

➥ **Restricted** (RS1894)

Initiation

Only if patient meets access criteria (as per https://pharmac.govt.nz/covid-oral-antivirals). Note the supply of treatment is via Pharmac's approved distribution process. Refer to the Pharmac website for more information about this and stock availability.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

REMDESIVIR – **Restricted** see terms below

Note: Remdesivir to be provided to Health NZ Hospitals at a cost of $0.00 as stock has been purchased directly by Pharmac.

⬇ Inj 100 mg vial ..... 760.57 1 Veklury

➥ **Restricted** (RS1912)

Initiation – Treatment of mild to moderate COVID-19

Only if patient meets access criteria (as per https://pharmac.govt.nz/covid-oral-antivirals). Note the supply of treatment is via Pharmac's approved distribution process. Refer to the Pharmac website for more information about this and stock availability.

Initiation – COVID-19 in hospitalised patients

Therapy limited to 5 doses

All of the following:

1 Patient is hospitalised with confirmed (or probable) symptomatic COVID-19; and
2 Patient is considered to be at high risk of progression to severe disease; and
3 Patient's symptoms started within the last 7 days; and
4 Patient does not require, or is not expected to require, mechanical ventilation; and
5 Not to be used in conjunction with other funded COVID-19 antiviral treatments; and
6 Treatment not to exceed five days.

Immune Modulators

INTERFERON ALFA-2B

Inj 18 m iu, 1.2 ml multidose pen
Inj 30 m iu, 1.2 ml multidose pen
Inj 60 m iu, 1.2 ml multidose pen

INTERFERON GAMMA – **Restricted** see terms below

⬇ Inj 100 mcg in 0.5 ml vial

➥ **Restricted** (RS1113)

Initiation

Patient has chronic granulomatous disease and requires interferon gamma.

PEGYLATED INTERFERON ALFA-2A – **Restricted** see terms below

⬇ Inj 180 mcg prefilled syringe ..... 748.50 4 Pegasys
1,355.71 Pegasys

➥ **Restricted** (RS1827)

Initiation – Chronic hepatitis C - genotype 1, 4, 5 or 6 infection or co-infection with HIV or genotype 2 or 3 post liver transplant

Limited to 48 weeks treatment

Any of the following:

1 Patient has chronic hepatitis C, genotype 1, 4, 5 or 6 infection; or
2 Patient has chronic hepatitis C and is co-infected with HIV; or
3 Patient has chronic hepatitis C genotype 2 or 3 and has received a liver transplant.

Notes: Consider stopping treatment if there is absence of a virological response (defined as at least a 2-log reduction in viral load) following 12 weeks of treatment since this is predictive of treatment failure.
Consider reducing treatment to 24 weeks if serum HCV RNA level at Week 4 is undetectable by sensitive PCR assay (less than 50IU/ml) AND Baseline serum HCV RNA is less than 400,000IU/ml.

Continuation – Chronic hepatitis C - genotype 1 infection

Gastroenterologist, infectious disease specialist or general physician

Re-assessment required after 48 weeks

All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient has chronic hepatitis C, genotype 1; and
2 Patient has had previous treatment with pegylated interferon and ribavirin; and
3 Either:
  3.1 Patient has responder relapsed; or
  3.2 Patient was a partial responder; and
4 Patient is to be treated in combination with boceprevir.

Initiation – Chronic Hepatitis C - genotype 1 infection treatment more than 4 years prior

Gastroenterologist, infectious disease specialist or general physician
Limited to 48 weeks treatment
All of the following:

1 Patient has chronic hepatitis C, genotype 1; and
2 Patient has had previous treatment with pegylated interferon and ribavirin; and
3 Any of the following:
  3.1 Patient has responder relapsed; or
  3.2 Patient was a partial responder; or
  3.3 Patient received interferon treatment prior to 2004; and
4 Patient is to be treated in combination with boceprevir.

Initiation – Chronic hepatitis C - genotype 2 or 3 infection without co-infection with HIV

Limited to 6 months treatment
Patient has chronic hepatitis C, genotype 2 or 3 infection.

Initiation – Hepatitis B

Gastroenterologist, infectious disease specialist or general physician
Limited to 48 weeks treatment
All of the following:

1 Patient has confirmed Hepatitis B infection (HBsAg positive for more than 6 months); and
2 Patient is Hepatitis B treatment-naive; and
3 ALT > 2 times Upper Limit of Normal; and
4 HBV DNA < 10 log10 IU/ml; and
5 Either:
  5.1 HBeAg positive; or
  5.2 Serum HBV DNA greater than or equal to 2,000 units/ml and significant fibrosis (greater than or equal to Metavir Stage F2 or moderate fibrosis); and
6 Compensated liver disease; and
7 No continuing alcohol abuse or intravenous drug use; and
8 Not co-infected with HCV, HIV or HDV; and
9 Neither ALT nor AST > 10 times upper limit of normal; and
10 No history of hypersensitivity or contraindications to pegylated interferon.

Initiation – myeloproliferative disorder or cutaneous T cell lymphoma

Re-assessment required after 12 months
Any of the following:

1 Patient has a cutaneous T cell lymphoma*; or
2 All of the following:
  2.1 Patient has a myeloproliferative disorder*; and
  2.2 Patient is intolerant of hydroxyurea; and
  2.3 Treatment with anagrelide and busulfan is not clinically appropriate; or
3 Both:
  3.1 Patient has a myeloproliferative disorder; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3.2 Patient is pregnant, planning pregnancy or lactating.

Continuation – myeloproliferative disorder or cutaneous T cell lymphoma

Re-assessment required after 12 months

All of the following:

1 No evidence of disease progression; and
2 The treatment remains appropriate and patient is benefitting from treatment; and
3 Either:
- 3.1 Patient has a cutaneous T cell lymphoma*; or
- 3.2 Both:
  - 3.2.1 Patient has a myeloproliferative disorder*; and
  - 3.2.2 Either:
    - 3.2.2.1 Remains intolerant of hydroxyurea and treatment with anagrelide and busulfan remains clinically inappropriate; or
    - 3.2.2.2 Patient is pregnant, planning pregnancy or lactating.

Note: Indications marked with * are unapproved indications

Initiation – ocular surface squamous neoplasia

Ophthalmologist

Re-assessment required after 12 months

Patient has ocular surface squamous neoplasia*.

Continuation – ocular surface squamous neoplasia

Ophthalmologist

Re-assessment required after 12 months

The treatment remains appropriate and patient is benefitting from treatment.

Note: Indications marked with * are unapproved indications

Initiation – post-allogenic bone marrow transplant

Re-assessment required after 3 months

Patient has received an allogeneic bone marrow transplant* and has evidence of disease relapse.

Continuation – post-allogenic bone marrow transplant

Re-assessment required after 3 months

Patient is responding and ongoing treatment remains appropriate.

Note: Indications marked with * are unapproved indications

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

⬇	Inj 60 mg per 1 ml prefilled syringe	250.00	1	Prolia

➥ **Restricted** (RS2097)

Initiation – Osteoporosis

All of the following:

1 The patient has established osteoporosis; and
2 Any of the following:
  2.1 History of one significant osteoporotic fracture demonstrated radiologically, with a documented T-Score less than or equal to -2.5, that incorporates BMD measured using dual-energy x-ray absorptiometry (DEXA); or
  2.2 History of one significant osteoporotic fracture, demonstrated radiologically, and either the patient is elderly, or densitometry scanning cannot be performed because of logistical, technical or pathophysiological reasons; or
  2.3 History of two significant osteoporotic fractures demonstrated radiologically; or
  2.4 Documented T-Score less than or equal to -3.0; or
  2.5 A 10-year risk of hip fracture greater than or equal to 3%, calculated using a published risk assessment algorithm that incorporates BMD measured using DEXA; and
3 Any of the following:
  3.1 Bisphosphonates are contraindicated because the patient's creatinine clearance or eGFR is less than 35 mL/min; or
  3.2 The patient has experienced at least two symptomatic new fractures or a BMD loss greater than 2% per year, after at least 12 months' continuous therapy with a funded antiresorptive agent; or
  3.3 Bisphosphonates result in intolerable side effects; or
  3.4 Intravenous bisphosphonates cannot be administered due to logistical or technical reasons.

Initiation – Hypercalcaemia

Both:

1 Patient has hypercalcaemia of malignancy; and
2 Patient has severe renal impairment.

RALOXIFENE – **Restricted** see terms below

⬇	Tab 60 mg	53.76	28	Evista

➥ **Restricted** (RS1666)

Initiation

Any of the following:

1 History of one significant osteoporotic fracture demonstrated radiologically and documented bone mineral density (BMD) greater than or equal to 2.5 standard deviations below the mean normal value in young adults (i.e. T-Score less than or equal to -2.5) (see Notes); or
2 History of one significant osteoporotic fracture demonstrated radiologically, and either the patient is elderly, or densitometry scanning cannot be performed because of major logistical, technical or pathophysiological reasons. It is unlikely that this provision would apply to many patients under 75 years of age; or
3 History of two significant osteoporotic fractures demonstrated radiologically; or
4 Documented T-Score greater than or equal to -3.0 (see Notes); or
5 A 10-year risk of hip fracture greater than or equal to 3%, calculated using a published risk assessment algorithm (e.g. FRAX or Garvan) which incorporates BMD measurements (see Notes); or
6 Patient has had a Special Authority approval for zoledronic acid (Underlying cause - Osteoporosis) or has had a Special Authority approval for alendronate (Underlying cause - Osteoporosis) prior to 1 February 2019.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Notes:

a) BMD (including BMD used to derive T-Score) must be measured using dual-energy x-ray absorptiometry (DXA). Quantitative ultrasound and quantitative computed tomography (QCT) are not acceptable.

b) Evidence suggests that patients aged 75 years and over who have a history of significant osteoporotic fracture demonstrated radiologically are very likely to have a T-Score less than or equal to -2.5 and, therefore, do not require BMD measurement for raloxifene funding.

c) Osteoporotic fractures are the incident events for severe (established) osteoporosis, and can be defined using the WHO definitions of osteoporosis and fragility fracture. The WHO defines severe (established) osteoporosis as a T-score below -2.5 with one or more associated fragility fractures. Fragility fractures are fractures that occur as a result of mechanical forces that would not ordinarily cause fracture (minimal trauma). The WHO has quantified this as forces equivalent to a fall from a standing height or less.

d) A vertebral fracture is defined as a 20% or greater reduction in height of the anterior or mid portion of a vertebral body relative to the posterior height of that body, or a 20% or greater reduction in any of these heights compared to the vertebral body above or below the affected vertebral body.

TERIPARATIDE – **Restricted** see terms below

⬇	Inj 250 mcg per ml, 2.4 ml	195.00	1	Teriparatide - Teva

➥ **Restricted** (RS1143)

Initiation

Limited to 18 months treatment

All of the following:

1 The patient has severe, established osteoporosis; and
2 The patient has a documented T-score less than or equal to -3.0 (see Notes); and
3 The patient has had two or more fractures due to minimal trauma; and
4 The patient has experienced at least one symptomatic new fracture after at least 12 months' continuous therapy with a funded antiresorptive agent at adequate doses (see Notes).

Notes:

a) The bone mineral density (BMD) measurement used to derive the T-score must be made using dual-energy x-ray absorptiometry (DXA). Quantitative ultrasound and quantitative computed tomography (QCT) are not acceptable

b) Antiresorptive agents and their adequate doses for the purposes of this restriction are defined as: alendronate sodium tab 70 mg or tab 70 mg with colecalciferol 5,600 iu once weekly; raloxifene hydrochloride tab 60 mg once daily; zoledronic acid 5 mg per year. If an intolerance of a severity necessitating permanent treatment withdrawal develops during the use of one antiresorptive agent, an alternate antiresorptive agent must be trialled so that the patient achieves the minimum requirement of 12 months' continuous therapy.

c) A vertebral fracture is defined as a 20% or greater reduction in height of the anterior or mid portion of a vertebral body relative to the posterior height of that body, or a 20% or greater reduction in any of these heights compared to the vertebral body above or below the affected vertebral body.

Initiation – Gout

Both:

1 Patient has been diagnosed with gout; and

2 Any of the following:

2.1 The patient has a serum urate level greater than 0.36 mmol/l despite treatment with allopurinol at doses of at least 600 mg/day and addition of probenecid at doses of up to 2 g per day or maximum tolerated dose; or

2.2 The patient has experienced intolerable side effects from allopurinol such that treatment discontinuation is required and serum urate remains greater than 0.36 mmol/l despite use of probenecid at doses of up to 2 g per day or maximum tolerated dose; or

2.3 The patient has renal impairment such that probenecid is contraindicated or likely to be ineffective and serum urate remains greater than 0.36 mmol/l despite optimal treatment with allopurinol (see Note); or

2.4 The patient has previously had an initial Special Authority approval for benzbromarone for treatment of gout..

Initiation – Tumour lysis syndrome

Haematologist or oncologist

Re-assessment required after 6 weeks

Both:

1 Patient is scheduled to receive cancer therapy carrying an intermediate or high risk of tumour lysis syndrome; and

2 Patient has a documented history of allopurinol intolerance.

Continuation – Tumour lysis syndrome

Haematologist or oncologist

Re-assessment required after 6 weeks

The treatment remains appropriate and patient is benefitting from treatment.

Initiation

Any of the following:

1 Patient requires reversal of profound neuromuscular blockade following rapid sequence induction that has been undertaken using rocuronium (i.e. suxamethonium is contraindicated or undesirable); or
2 Severe neuromuscular degenerative disease where the use of neuromuscular blockade is required; or
3 Patient has an unexpectedly difficult airway that cannot be intubated and requires a rapid reversal of anaesthesia and neuromuscular blockade; or
4 The duration of the patient's surgery is unexpectedly short; or
5 Neostigmine or a neostigmine/anticholinergic combination is contraindicated (for example the patient has ischaemic heart disease, morbid obesity or COPD); or
6 Patient has a partial residual block after conventional reversal.

Neurologist or respiratory specialist

Re-assessment required after 6 months

All of the following:

1 The patient has amyotrophic lateral sclerosis with disease duration of 5 years or less; and
2 The patient has at least 60 percent of predicted forced vital capacity within 2 months prior to the initial application; and
3 The patient has not undergone a tracheostomy; and
4 The patient has not experienced respiratory failure; and
5 Any of the following:
  5.1 The patient is ambulatory; or
  5.2 The patient is able to use upper limbs; or
  5.3 The patient is able to swallow.

Continuation

Re-assessment required after 18 months

All of the following:

1 The patient has not undergone a tracheostomy; and
2 The patient has not experienced respiratory failure; and
3 Any of the following:
  3.1 The patient is ambulatory; or
  3.2 The patient is able to use upper limbs; or
  3.3 The patient is able to swallow.

➥ **Restricted** (RS1988)

Initiation

Re-assessment required after 15 months

Both:

1 Patient has focal epilepsy; and

2 Seizures are not adequately controlled by, or patient has experienced unacceptable side effects from, optimal treatment with all of the following: sodium valproate, topiramate, levetiracetam, and any two of carbamazepine, lamotrigine, and phenytoin sodium (see Note).

Note: Those of childbearing potential are not required to trial phenytoin sodium, sodium valproate, or topiramate. Those who can father children are not required to trial sodium valproate.

Continuation

Patient has demonstrated a significant and sustained improvement in seizure rate or severity and/or quality of life compared with that prior to starting lacosamide treatment.

Initiation

Paediatric neurologist

Re-assessment required after 6 months

Both:

1 Patient has confirmed diagnosis of Dravet syndrome; and

2 Seizures have been inadequately controlled by appropriate courses of sodium valproate, clobazam and at least two of the following: topiramate, levetiracetam, ketogenic diet.

Note: Those of childbearing potential are not required to trial sodium valproate or topiramate. Those who can father children are not required to trial sodium valproate.

Continuation

Paediatric neurologist

Patient continues to benefit from treatment as measured by reduced seizure frequency from baseline.

Initiation

Re-assessment required after 15 months

Both:

1 Any of the following:

1.1 Patient has infantile spasms; or

1.2 Both:

1.2.1 Patient has epilepsy; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2.2 Either:

1.2.2.1 Seizures are not adequately controlled with optimal treatment with other antiepilepsy agents; or

1.2.2.2 Seizures are controlled adequately but the patient has experienced unacceptable side effects from optimal treatment with other antiepilepsy agents; or

1.3 Patient has tuberous sclerosis complex; and

2 Either:

2.1 Patient is, or will be, receiving regular automated visual field testing (ideally before starting therapy and on a 6-monthly basis thereafter); or

2.2 It is impractical or impossible (due to comorbid conditions) to monitor the patient's visual fields.

Continuation

Both:

1 The patient has demonstrated a significant and sustained improvement in seizure rate or severity and or quality of life; and

2 Either:

2.1 Patient is receiving regular automated visual field testing (ideally every 6 months) on an ongoing basis for duration of treatment with vigabatrin; or

2.2 It is impractical or impossible (due to comorbid conditions) to monitor the patient's visual fields.

Depot Injections

ARIPIPRAZOLE – **Restricted** see terms below

⬇ Inj 300 mg vial	273.56	1	Abilify Maintena
⬇ Inj 400 mg vial	341.96	1	Abilify Maintena

➥ **Restricted** (RS2058)

Initiation

Either:

1 Either:

1.1 The patient has had an initial Special Authority approval for risperidone depot injection or paliperidone depot injection or olanzapine depot injection; or

1.2 All of the following:

1.2.1 The patient has schizophrenia or other psychotic disorder; and

1.2.2 The patient has received treatment with oral atypical antipsychotic agents but has been unable to adhere; and

1.2.3 The patient has been admitted to hospital or treated in respite care, or intensive outpatient or home-based treatment for 30 days or more in last 12 months; or

2 Patient has been unable to access olanzapine depot injection due to supply issues with olanzapine depot injection, or otherwise would have been initiated on olanzapine depot injection but has been unable to due to supply issues with olanzapine depot injection. (see Note below for the olanzapine Special Authority criteria for new olanzapine depot injection patients prior to 1 April 2024).

Notes: The Olanzapine depot injection Special Authority criteria that apply to criterion 2 in this Aripiprazole Special Authority application are as follows:

- The patient has had an initial Special Authority approval for paliperidone depot injection or risperidone depot injection; or
- All of the following:
  - The patient has schizophrenia; and
  - The patient has tried but has not been able to adhere with treatment using oral atypical antipsychotic agents; and
  - The patient has been admitted to hospital or treated in respite care, or intensive outpatient or home-based treatment for 30 days or more in the last 12 months.

FLUPENTHIXOL DECANOATE

Multiple Sclerosis Treatments

➥ **Restricted** (RS1993)

Initiation – Multiple Sclerosis - dimethyl fumarate, fingolimod, glatiramer acetate, interferon beta-1-alpha, interferon beta-1-beta, natalizumab and teriflunomide

Any relevant practitioner

Re-assessment required after 12 months

Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 All of the following:
- 1.1 Diagnosis of multiple sclerosis (MS) meets the McDonald 2017 diagnostic criteria for MS and has been confirmed by a neurologist; and
- 1.2 Patient has an EDSS score between 0 – 6.0; and
- 1.3 Patient has had at least one significant attack of MS in the previous 12 months or two significant attacks in the past 24 months; and
- 1.4 All of the following:
  - 1.4.1 Each significant attack must be confirmed by the applying neurologist or general physician (the patient may not necessarily have been seen by them during the attack, but the neurologist/physician must be satisfied that the clinical features were characteristic); and
  - 1.4.2 Each significant attack is associated with characteristic new symptom(s)/sign(s) or substantially worsening of previously experienced symptoms(s)/sign(s); and
  - 1.4.3 Each significant attack has lasted at least one week and has started at least one month after the onset of a previous attack (where relevant); and
  - 1.4.4 Each significant attack can be distinguished from the effects of general fatigue; and is not associated with a fever (T> 37.5°C); and
  - 1.4.5 Either:
    - 1.4.5.1 Each significant attack is severe enough to change either the EDSS or at least one of the Kurtze Functional System scores by at least 1 point; or
    - 1.4.5.2 Each significant attack is a recurrent paroxysmal symptom of multiple sclerosis (tonic seizures/spasms, trigeminal neuralgia, Lhermitte's symptom); and
- 1.5 Evidence of new inflammatory activity on an MRI scan within the past 24 months; and
- 1.6 Any of the following:
  - 1.6.1 A sign of that new inflammatory activity on MRI scanning (in criterion 5 immediately above) is a gadolinium enhancing lesion; or
  - 1.6.2 A sign of that new inflammatory activity is a lesion showing diffusion restriction; or
  - 1.6.3 A sign of that new inflammatory is a T2 lesion with associated local swelling; or
  - 1.6.4 A sign of that new inflammatory activity is a prominent T2 lesion that clearly is responsible for the clinical features of a recent attack that occurred within the last 2 years; or
  - 1.6.5 A sign of that new inflammatory activity is new T2 lesions compared with a previous MRI scan; or

2 Patient has an active approval for ocrelizumab and does not have primary progressive MS.

Note: Treatment on two or more funded multiple sclerosis treatments simultaneously is not permitted.

Continuation – Multiple Sclerosis - dimethyl fumarate, fingolimod, glatiramer acetate, interferon beta-1-alpha, interferon beta-1-beta, natalizumab and teriflunomide

Any relevant practitioner

Patient has had an EDSS score of 0 to 6.0 (inclusive) with or without the use unilateral or bilateral aids at any time in the last six months (ie the patient has walked 100 metres or more with or without aids in the last six months).

Note: Treatment on two or more funded multiple sclerosis treatments simultaneously is not permitted.

2 Patient has an active Special Authority approval for either dimethyl fumarate, fingolimod, glatiramer acetate, interferon beta-1-alpha, interferon beta-1-beta, natalizumab or teriflunomide.

Note: Treatment on two or more funded multiple sclerosis treatments simultaneously is not permitted.

Continuation – Multiple Sclerosis - ocrelizumab

Any relevant practitioner

Patient has had an EDSS score of 0 to 6.0 (inclusive) with or without the use unilateral or bilateral aids at any time in the last six months (ie the patient has walked 100 metres or more with or without aids in the last six months).

Note: Treatment on two or more funded multiple sclerosis treatments simultaneously is not permitted.

Initiation – Primary Progressive Multiple Sclerosis

Any relevant practitioner

Re-assessment required after 12 months

All of the following:

1 Diagnosis of primary progressive multiple sclerosis (PPMS) meets the 2017 McDonald criteria and has been confirmed by a neurologist; and
2 Patient has an EDSS 2.0 (score equal to or greater than 2 on pyramidal functions) to EDSS 6.5; and
3 Patient has no history of relapsing remitting multiple sclerosis.

Continuation – Primary Progressive Multiple Sclerosis

Any relevant practitioner

Patient has had an EDSS score of less than or equal to 6.5 at any time in the last six months (ie patient has walked 20 metres with bilateral assistance/aids, without rest in the last six months).

➥ **Restricted** (RS1576)

Initiation – insomnia secondary to neurodevelopmental disorder

Psychiatrist, paediatrician, neurologist or respiratory specialist

Re-assessment required after 12 months

All of the following:

1 Patient has been diagnosed with persistent and distressing insomnia secondary to a neurodevelopmental disorder (including, but not limited to, autism spectrum disorder or attention deficit hyperactivity disorder); and
2 Behavioural and environmental approaches have been tried or are inappropriate; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 Funded modified-release melatonin is to be given at doses no greater than 10 mg per day; and
4 Patient is aged 18 years or under.

Continuation – insomnia secondary to neurodevelopmental disorder
Psychiatrist, paediatrician, neurologist or respiratory specialist
Re-assessment required after 12 months
All of the following:

1 Patient is aged 18 years or under; and
2 Patient has demonstrated clinically meaningful benefit from funded modified-release melatonin (clinician determined); and
3 Patient has had a trial of funded modified-release melatonin discontinuation within the past 12 months and has had a recurrence of persistent and distressing insomnia; and
4 Funded modified-release melatonin is to be given at doses no greater than 10 mg per day.

Initiation – insomnia where benzodiazepines and zopiclone are contraindicated
Both:

1 Patient has insomnia and benzodiazepines and zopiclone are contraindicated; and
2 For in-hospital use only.

    2.3.1 Patient is taking a currently subsidised formulation of atomoxetine or methylphenidate hydrochloride (extended-release) and has not received sufficient benefit or has experienced intolerable side effects; or
    2.3.2 Patient is taking a currently subsidised formulation of dexamfetamine sulfate (immediate-release) which has not been effective due to significant administration and/or treatment adherence difficulties; or
    2.3.3 There is significant concern regarding the risk of diversion or abuse of immediate release dexamfetamine sulfate; or
    2.3.4 Patient is taking a currently subsidised formulation of methylphenidate hydrochloride (immediate-release or sustained release) which has not been effective due to significant administration and/or treatment adherence difficulties; or
    2.3.5 There is significant concern regarding the risk of diversion or abuse of immediate release methylphenidate hydrochloride; or
    2.3.6 Both:
      2.3.6.1 Patient would have been prescribed a subsidised formulation of methylphenidate hydrochloride (extended-release) but has been unable to access due to supply issues with methylphenidate hydrochloride (extended-release); and
      2.3.6.2 Other alternative stimulant presentations (methylphenidate or dexamfetamine) are not appropriate; and
  2.4 Lisdexamfetamine dimesilate is not to be used in combination with another funded methylphenidate presentation.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS2105)

Initiation – ADHD (immediate-release and sustained-release formulations)

Paediatrician or psychiatrist

Patient has ADHD (Attention Deficit and Hyperactivity Disorder), diagnosed according to DSM-IV or ICD 10 criteria.

Initiation – Narcolepsy (immediate-release and sustained-release formulations)

Neurologist or respiratory specialist

Patient suffers from narcolepsy.

Initiation – Extended-release and modified-release formulations

Paediatrician or psychiatrist

Both:

1 Patient has ADHD (Attention Deficit and Hyperactivity Disorder), diagnosed according to DSM-IV or ICD 10 criteria; and

2 Either:

2.1 Patient is taking a currently listed formulation of methylphenidate hydrochloride (immediate-release or sustained-release) which has not been effective due to significant administration and/or compliance difficulties; or

2.2 There is significant concern regarding the risk of diversion or abuse of immediate-release methylphenidate hydrochloride.

Initiation – Narcolepsy* (extended-release only)

Neurologist or respiratory specialist

Patient suffers from narcolepsy.

Note: *narcolepsy is not a registered indication for Concerta or Ritalin LA.

MODAFINIL – **Restricted** see terms below			
⬇ Tab 100 mg – **5% DV May-25 to 2027**	14.27	30	**Modafinil Max Health**

➥ **Restricted** (RS2106)

Initiation – Narcolepsy

Neurologist or respiratory specialist

Either:

1 All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has a diagnosis of narcolepsy and has excessive daytime sleepiness associated with narcolepsy occurring almost daily for three months or more; and
1.2 Either:
1.2.1 The patient has a multiple sleep latency test with a mean sleep latency of less than or equal to 10 minutes and 2 or more sleep onset rapid eye movement periods; or
1.2.2 The patient has at least one of: cataplexy, sleep paralysis or hypnagogic hallucinations; and
1.3 Either:
1.3.1 An effective dose of a listed formulation of methylphenidate or dexamphetamine has been trialled and discontinued because of intolerable side effects; or
1.3.2 Methylphenidate and dexamphetamine are contraindicated; or
2 Both:
2.1 Patient meets the Hospital Restriction criteria for methylphenidate hydrochloride for narcolepsy; and
2.2 Patient is unable to access methylphenidate hydrochloride presentations due to an out of stock (see note).

Note: Criterion 2 is to permit short-term funding to cover an out-of-stock of methylphenidate hydrochloride.

Treatments for Dementia

DONEPEZIL HYDROCHLORIDE

Tab 5 mg – **5% DV Jun-24 to 2026**	3.70	84	**Ipca-Donepezil**
Tab 10 mg – **5% DV Jun-24 to 2026**	5.50	84	**Ipca-Donepezil**

RIVASTIGMINE – **Restricted** see terms below

⬇ Patch 4.6 mg per 24 hour – **5% DV Mar-25 to 2027**	49.40	30	**Rivastigmine Patch BNM 5**
⬇ Patch 9.5 mg per 24 hour – **5% DV Mar-25 to 2027**	49.40	30	**Rivastigmine Patch BNM 10**

➥ **Restricted** (RS1436)
Initiation
Re-assessment required after 6 months
Both:
1 The patient has been diagnosed with dementia; and
2 The patient has experienced intolerable nausea and/or vomiting from donepezil tablets.
Continuation
Re-assessment required after 12 months
Both:
1 The treatment remains appropriate; and
2 The patient has demonstrated a significant and sustained benefit from treatment.

Treatments for Substance Dependence

BUPRENORPHINE WITH NALOXONE – **Restricted** see terms below

⬇ Tab 2 mg with naloxone 0.5 mg	11.76	28	Buprenorphine Naloxone BNM
⬇ Tab 8 mg with naloxone 2 mg	34.00	28	Buprenorphine Naloxone BNM

➥ **Restricted** (RS1172)
Initiation – Detoxification
All of the following:
1 Patient is opioid dependent; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Patient is currently engaged with an opioid treatment service approved by the Ministry of Health; and
3 Prescriber works in an opioid treatment service approved by the Ministry of Health.

Initiation – Maintenance treatment

All of the following:

1 Patient is opioid dependent; and
2 Patient will not be receiving methadone; and
3 Patient is currently enrolled in an opioid substitution treatment program in a service approved by the Ministry of Health; and
4 Prescriber works in an opioid treatment service approved by the Ministry of Health.

⬇ Tab 1 mg	17.62	56	Champix

➥ **Restricted** (RS1702)

Initiation

All of the following:

1 Short-term therapy as an aid to achieving abstinence in a patient who has indicated that they are ready to cease smoking; and
2 The patient is part of, or is about to enrol in, a comprehensive support and counselling smoking cessation programme, which includes prescriber or nurse monitoring; and
3 Either:
  3.1 The patient has tried but failed to quit smoking after at least two separate trials of nicotine replacement therapy, at least one of which included the patient receiving comprehensive advice on the optimal use of nicotine replacement therapy; or
  3.2 The patient has tried but failed to quit smoking using bupropion or nortriptyline; and
4 The patient has not had a Special Authority for varenicline approved in the last 6 months; and
5 Varenicline is not to be used in combination with other pharmacological smoking cessation treatments and the patient has agreed to this; and
6 The patient is not pregnant; and
7 The patient will not be prescribed more than 12 weeks' funded varenicline in a 12 month period.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Chemotherapeutic Agents

Alkylating Agents

BENDAMUSTINE HYDROCHLORIDE – **Restricted** see terms below

⬇	Inj 25 mg vial – **5% DV Apr-25 to 2027**	50.05	1	**Bendamustine Sandoz**
⬇	Inj 100 mg vial – **5% DV Apr-25 to 2027**	200.20	1	**Bendamustine Sandoz**

➥ **Restricted** (RS2061)

Initiation – CLL*

All of the following:

1 The patient has chronic lymphocytic leukaemia requiring treatment; and
2 Patient has ECOG performance status 0-2; and
3 Bendamustine is to be administered at a maximum dose of 100 mg/m^2 on days 1 and 2 every 4 weeks for a maximum of 6 cycles.

Note: Indication marked with a * includes indications that are unapproved. 'Chronic lymphocytic leukaemia (CLL)' includes small lymphocytic lymphoma (SLL).

Initiation – Indolent, Low-grade lymphomas

Re-assessment required after 9 months

All of the following:

1 The patient has indolent low grade NHL requiring treatment; and
2 Patient has ECOG performance status of 0-2; and
3 Any of the following:
  3.1 Both:
    3.1.1 Patient is treatment naive; and
    3.1.2 Bendamustine is to be administered for a maximum of 6 cycles (in combination with rituximab when CD20+); or
  3.2 Both:
    3.2.1 Patient is refractory to or has relapsed within 12 months of a rituximab containing combined chemo-immunotherapy regimen; and
    3.2.2 Bendamustine is to be administered in combination with obinutuzumab for a maximum of 6 cycles; or
  3.3 All of the following:
    3.3.1 The patient has not received prior bendamustine therapy; and
    3.3.2 Bendamustine is to be administered for a maximum of 6 cycles in relapsed patients (in combination with rituximab when CD20+); and
    3.3.3 Patient has had a rituximab treatment-free interval of 12 months or more; or
  3.4 Bendamustine is to be administered as monotherapy for a maximum of 6 cycles in rituximab refractory patients.

Continuation – Indolent, Low-grade lymphomas

Re-assessment required after 9 months

Either:

1 Both:
  1.1 Patient is refractory to or has relapsed within 12 months of rituximab in combination with bendamustine; and
  1.2 Bendamustine is to be administered in combination with obinutuzumab for a maximum of 6 cycles; or
2 Both:
  2.1 Patients have not received a bendamustine regimen within the last 12 months; and
  2.2 Either:
    2.2.1 Both:
      2.2.1.1 Bendamustine is to be administered for a maximum of 6 cycles in relapsed patients (in combination with rituximab when CD20+); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.1.2 Patient has had a rituximab treatment-free interval of 12 months or more; or

2.2.2 Bendamustine is to be administered as a monotherapy for a maximum of 6 cycles in rituximab refractory patients.

Note: 'indolent, low-grade lymphomas' includes follicular, mantle cell, marginal zone and lymphoplasmacytic/ Waldenström's macroglobulinaemia.

Initiation – Hodgkin's lymphoma*

Relevant specialist or medical practitioner on the recommendation of a relevant specialist

Limited to 6 months treatment

All of the following:

1 Patient has Hodgkin's lymphoma requiring treatment; and
2 Patient has a ECOG performance status of 0-2; and
3 Patient has received one prior line of chemotherapy; and
4 Patient's disease relapsed or was refractory following prior chemotherapy; and
5 Bendamustine is to be administered in combination with gemcitabine and vinorelbine (BeGeV) at a maximum dose of no greater than 90 mg/m2 twice per cycle, for a maximum of four cycles.

Note: Indications marked with * are unapproved indications.

➥ **Restricted** (RS2027)

Initiation

Re-assessment required after 6 months

All of the following:

1 Patient has advanced high-grade serous* epithelial ovarian, fallopian tube, or primary peritoneal cancer; and
2 Patient has received at least one line** of treatment with platinum-based chemotherapy; and
3 Patient has experienced a partial or complete response to the preceding treatment with platinum-based chemotherapy; and
4 Patient has not previously received funded treatment with a PARP inhibitor; and
5 Either:
  5.1 Treatment will be commenced within 12 weeks of the patient's last dose of the preceding platinum-based regimen; or
  5.2 Patient commenced treatment with niraparib prior to 1 May 2024; and
6 Treatment to be administered as maintenance treatment; and
7 Treatment not to be administered in combination with other chemotherapy.

Continuation

Re-assessment required after 6 months

All of the following:

1 No evidence of progressive disease; and
2 Treatment to be administered as maintenance treatment; and
3 Treatment not to be administered in combination with other chemotherapy; and
4 Either:
  4.1 Treatment with niraparib to cease after a total duration of 36 months from commencement; or
  4.2 Treatment with niraparib is being used in the second-line or later maintenance setting.

Notes: * "high-grade serous" includes tumours with high-grade serous features or a high-grade serous component.
**A line of chemotherapy treatment is considered to comprise a known standard therapeutic chemotherapy regimen and supportive treatments

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1925)

Initiation – Ovarian cancer

Medical oncologist

Re-assessment required after 12 months

All of the following:

1 Patient has a high-grade serous* epithelial ovarian, fallopian tube, or primary peritoneal cancer; and
2 There is documentation confirming pathogenic germline BRCA1 or BRCA2 gene mutation; and
3 Either:
  3.1 All of the following:
    3.1.1 Patient has newly diagnosed, advanced disease; and
    3.1.2 Patient has received one line** of previous treatment with platinum-based chemotherapy; and
    3.1.3 Patient's disease must have experienced a partial or complete response to the first-line platinum-based regimen; or
  3.2 All of the following:
    3.2.1 Patient has received at least two lines** of previous treatment with platinum-based chemotherapy; and
    3.2.2 Patient has platinum sensitive disease defined as disease progression occurring at least 6 months after the last dose of the penultimate line** of platinum-based chemotherapy; and
    3.2.3 Patient's disease must have experienced a partial or complete response to treatment with the immediately preceding platinum-based regimen; and
    3.2.4 Patient has not previously received funded olaparib treatment; and
4 Treatment will be commenced within 12 weeks of the patient's last dose of the immediately preceding platinum-based regimen; and
5 Treatment to be administered as maintenance treatment; and
6 Treatment not to be administered in combination with other chemotherapy.

Continuation – Ovarian cancer

Medical oncologist

Re-assessment required after 12 months

All of the following:

1 Treatment remains clinically appropriate and patient is benefitting from treatment; and
2 Either:
  2.1 No evidence of progressive disease; or
  2.2 Evidence of residual (not progressive) disease and the patient would continue to benefit from treatment in the clinician's opinion; and
3 Treatment to be administered as maintenance treatment; and
4 Treatment not to be administered in combination with other chemotherapy; and
5 Either:
  5.1 Both:
    5.1.1 Patient has received one line** of previous treatment with platinum-based chemotherapy; and
    5.1.2 Documentation confirming that the patient has been informed and acknowledges that the funded treatment period of olaparib will not be continued beyond 2 years if the patient experiences a complete response to treatment and there is no radiological evidence of disease at 2 years; or
  5.2 Patient has received at least two lines** of previous treatment with platinum-based chemotherapy.

Notes: *Note "high-grade serous" includes tumours with high-grade serous features or a high-grade serous component.
**A line of chemotherapy treatment is considered to comprise a known standard therapeutic chemotherapy regimen and supportive treatments.

PEGASPARGASE – **Restricted** see terms on the next page			
⬇ Inj 750 iu per ml, 5 ml vial	3,973.25	1	Oncaspar LYO

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
➥ **Restricted** (RS1788)			
Initiation – Newly diagnosed ALL			
Limited to 12 months treatment			
Both:			
1 The patient has newly diagnosed acute lymphoblastic leukaemia; and			
2 Pegaspargase to be used with a contemporary intensive multi-agent chemotherapy treatment protocol.			
Initiation – Relapsed ALL			
Limited to 12 months treatment			
Both:			
1 The patient has relapsed acute lymphoblastic leukaemia; and			
2 Pegaspargase to be used with a contemporary intensive multi-agent chemotherapy treatment protocol.			
Initiation – Lymphoma			
Limited to 12 months treatment			
Patient has lymphoma requiring L-asparaginase containing protocol (e.g. SMILE).

Initiation – gliomas			
Re-assessment required after 12 months			
Patient has a glioma.			

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – gliomas

Re-assessment required after 12 months

Treatment remains appropriate and patient is benefitting from treatment.

Initiation – Neuroendocrine tumours

Re-assessment required after 9 months

All of the following:

1 Patient has been diagnosed with metastatic or unresectable well-differentiated neuroendocrine tumour*; and
2 Temozolomide is to be given in combination with capecitabine; and
3 Temozolomide is to be used in 28 day treatment cycles for a maximum of 5 days treatment per cycle at a maximum dose of 200 mg/m^2 per day; and
4 Temozolomide to be discontinued at disease progression.

Continuation – Neuroendocrine tumours

Re-assessment required after 6 months

Both:

1 No evidence of disease progression; and
2 The treatment remains appropriate and the patient is benefitting from treatment.

Initiation – ewing's sarcoma

Re-assessment required after 9 months

Patient has relapse or refractory Ewing's sarcoma.

Continuation – ewing's sarcoma

Re-assessment required after 6 months

Both:

1 No evidence of disease progression; and
2 The treatment remains appropriate and the patient is benefitting from treatment.

Note: Indication marked with a * is an unapproved indication. Temozolomide is not funded for the treatment of relapsed high grade glioma.

THALIDOMIDE – **Restricted** see terms below

⬇	Cap 50 mg	378.00	28	Thalomid
⬇	Cap 100 mg	756.00	28	Thalomid

➥ **Restricted** (RS2046)

Initiation

Re-assessment required after 12 months

Either:

1 The patient has plasma cell dyscrasia, not including Waldenström macroglobulinaemia, requiring treatment; or
2 The patient has erythema nodosum leprosum.

Continuation

Patient has obtained a response from treatment during the initial approval period.

Notes: Prescription must be written by a registered prescriber in the thalidomide risk management programme operated by the supplier

Maximum dose of 400 mg daily as monotherapy or in a combination therapy regimen

TRETINOIN

Initiation – relapsed/refractory chronic lymphocytic leukaemia

Re-assessment required after 7 months

All of the following:

1 Individual has chronic lymphocytic leukaemia requiring treatment; and
2 Individual has received at least one prior therapy for chronic lymphocytic leukaemia; and
3 Individual has not previously received funded venetoclax; and
4 The individual's disease has relapsed; and
5 Venetoclax to be used in combination with six 28-day cycles of rituximab commencing after the 5-week dose titration schedule with venetoclax; and
6 Individual has an ECOG performance status of 0-2.

Continuation – relapsed/refractory chronic lymphocytic leukaemia

Re-assessment required after 6 months

Both:

1 Treatment remains clinically appropriate and the individual is benefitting from and tolerating treatment; and
2 Venetoclax is to be discontinued after a maximum of 24 months of treatment following the titration schedule unless earlier discontinuation is required due to disease progression or unacceptable toxicity.

Initiation – previously untreated chronic lymphocytic leukaemia with 17p deletion or TP53 mutation*

Re-assessment required after 6 months

All of the following:

1 Individual has previously untreated chronic lymphocytic leukaemia; and
2 There is documentation confirming that the individual has 17p deletion by FISH testing or TP53 mutation by sequencing; and
3 Individual has an ECOG performance status of 0-2.

Continuation – previously untreated chronic lymphocytic leukaemia with 17p deletion or TP53 mutation*

Re-assessment required after 6 months

No evidence of disease progression.

Note: 'Chronic lymphocytic leukaemia (CLL)' includes small lymphocytic lymphoma (SLL)* and B-cell prolymphocytic leukaemia (B-PLL)*. Indications marked with * are unapproved indications

Initiation – previously untreated acute myeloid leukaemia

Re-assessment required after 6 months

Either:

1 The individual is currently on treatment with venetoclax and met all remaining special authority criteria prior to commencing treatment; or
2 All of the following:
  2.1 Individual has previously untreated acute myeloid leukaemia (see note a), according to World Health Organization (WHO) Classification; and
  2.2 Venetoclax not to be used in combination with standard intensive remission induction chemotherapy; and
  2.3 Venetoclax to be used in combination with azacitidine or low dose cytarabine.

Continuation – previously untreated acute myeloid leukaemia

Re-assessment required after 6 months

No evidence of disease progression.

Notes:

a) 'Acute myeloid leukaemia' includes myeloid sarcoma*
b) Indications marked with * are Unapproved indications

Initiation – stage III or IV resected melanoma - adjuvant

Any relevant practitioner

Re-assessment required after 4 months

Either:

1 The individual is currently on treatment with dabrafenib and trametinib and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Either:
    2.1.1 The individual has resected stage IIIB, IIIC, IIID or IV melanoma (excluding uveal) (see note a); or
    2.1.2 Both:
      2.1.2.1 The individual has received neoadjuvant treatment with a PD-1/PD-L1 inhibitor; and
      2.1.2.2 Adjuvant treatment with dabrafenib is required; and
  2.2 The individual has not received prior funded systemic treatment in the adjuvant setting for stage IIIB, IIIC, IIID or IV melanoma; and
  2.3 Treatment must be adjuvant to complete surgical resection; and
  2.4 Treatment must be initiated within 13 weeks of surgical resection, unless delay is necessary due to post-surgery recovery (see note b); and
  2.5 The individual has a confirmed BRAF mutation; and
  2.6 Dabrafenib must be administered in combination with trametinib; and
  2.7 The individual has ECOG performance score 0-2.

Notes:

a) Stage IIIB, IIIC, IIID or IV melanoma defined as per American Joint Committee on Cancer (AJCC) 8th Edition
b) Initiating treatment within 13 weeks of complete surgical resection means 13 weeks after resection (primary or lymphadenectomy)

Continuation – stage III or IV resected melanoma - adjuvant

Any relevant practitioner

Re-assessment required after 4 months

Any of the following:

1 All of the following:
  1.1 No evidence of disease recurrence; and
  1.2 Dabrafenib must be administered in combination with trametinib; and
  1.3 Treatment to be discontinued at signs of disease recurrence or at completion of 12 months' total treatment course, including any systemic neoadjuvant treatment; or
2 All of the following:
  2.1 The individual has received adjuvant treatment with a BRAF/MEK inhibitor; and
  2.2 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
  2.3 The individual meets initiation criteria for dabrafenib for unresectable or metastatic melanoma; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 All of the following:
- 3.1 The individual has received adjuvant treatment with a BRAF/MEK inhibitor; and
- 3.2 The individual has received a BRAF/MEK inhibitor for unresectable or metastatic melanoma; and
- 3.3 The individual meets continuation criteria for dabrafenib for unresectable or metastatic melanoma.

Initiation – unresectable or metastatic melanoma
Any relevant practitioner
Re-assessment required after 4 months
Either:
1 The individual is currently on treatment with dabrafenib and trametinib and met all remaining criteria prior to commencing treatment; or
2 All of the following:
- 2.1 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
- 2.2 Baseline measurement of overall tumour burden is documented clinically and radiologically; and
- 2.3 The individual has ECOG performance score 0-2; and
- 2.4 The individual has confirmed BRAF mutation; and
- 2.5 Dabrafenib must be administered in combination with trametinib; and
- 2.6 Any of the following:
  - 2.6.1 The individual has been diagnosed in the metastatic or unresectable stage III or IV setting; or
  - 2.6.2 The individual did not receive treatment in the adjuvant setting with a BRAF/MEK inhibitor; or
  - 2.6.3 All of the following:
    - 2.6.3.1 The individual received treatment in the adjuvant setting with a BRAF/MEK inhibitor; and
    - 2.6.3.2 The individual did not experience disease recurrence while on treatment with that BRAF/MEK inhibitor; and
    - 2.6.3.3 The individual did not experience disease recurrence within six months of completing adjuvant treatment with a BRAF/MEK inhibitor.

Continuation – unresectable or metastatic melanoma
Any relevant practitioner
Re-assessment required after 4 months
Both:
1 Any of the following:
- 1.1 The individual's disease has had a complete response to treatment; or
- 1.2 The individual's disease has had a partial response to treatment; or
- 1.3 The individual has stable disease with treatment; and

2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period.

Initiation – thyroid cancer

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with lenvatinib and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 The patient has locally advanced or metastatic differentiated thyroid cancer; and
  2.2 Either:
    2.2.1 Patient must have symptomatic progressive disease prior to treatment; or
    2.2.2 Patient must progressive disease at critical anatomical sites with a high risk of morbidity or mortality where local control cannot be achieved by other measures; and
  2.3 Any of the following:
    2.3.1 A lesion without iodine uptake in a RAI scan; or
    2.3.2 Receiving cumulative RAI greater than or equal to 600 mCi; or
    2.3.3 Experiencing disease progression after a RAI treatment within 12 months; or
    2.3.4 Experiencing disease progression after two RAI treatments administered within 12 months of each other; and
  2.4 Patient has thyroid stimulating hormone (TSH) adequately supressed; and
  2.5 Patient is not a candidate for radiotherapy with curative intent; and
  2.6 Surgery is clinically inappropriate; and
  2.7 Patient has an ECOG performance status of 0-2.

Continuation – thyroid cancer

Re-assessment required after 6 months

there is no evidence of disease progression.

Initiation – unresectable hepatocellular carcinoma

Re-assessment required after 6 months

All of the following:

1 Patient has unresectable hepatocellular carcinoma; and
2 Patient has preserved liver function (Childs-Pugh A); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 Transarterial chemoembolisation (TACE) is unsuitable; and
4 Patient has an ECOG performance status of 0-2; and
5 Either:
5.1 Patient has not received prior systemic therapy for their disease in the palliative setting; or
5.2 Both:
5.2.1 Patient has experienced treatment-limiting toxicity from treatment with atezolizumab with bevacizumab; and
5.2.2 No disease progression since initiation of atezolizumab with bevacizumab.

Continuation – unresectable hepatocellular carcinoma
Re-assessment required after 6 months
there is no evidence of disease progression.

Initiation – renal cell carcinoma
Re-assessment required after 4 months
Either:
1 All of the following:
1.1 The patient has metastatic renal cell carcinoma; and
1.2 The disease is of predominant clear-cell histology; and
1.3 The patient has documented disease progression following one previous line of treatment; and
1.4 The patient has an ECOG performance status of 0-2; and
1.5 Lenvatinib is to be used in combination with everolimus; or
2 All of the following:
2.1 Patient has received funded treatment with nivolumab for the second line treatment of metastatic renal cell carcinoma; and
2.2 Patient has experienced treatment limiting toxicity from treatment with nivolumab; and
2.3 Lenvatinib is to be used in combination with everolimus; and
2.4 There is no evidence of disease progression.

Continuation – renal cell carcinoma
Re-assessment required after 4 months
there is no evidence of disease progression.

MIDOSTAURIN – **Restricted** see terms below

⬇	Tab 80 mg	9,310.00	30	Tagrisso

➥ **Restricted** (RS2080)

Initiation – NSCLC – first line

Re-assessment required after 4 months

All of the following:

1 Patient has locally advanced or metastatic, incurable, non-squamous non-small cell lung cancer (NSCLC); and
2 Any of the following:
  2.1 Patient is treatment naïve; or
  2.2 Patient has received prior treatment in the adjuvant setting and/or while awaiting EGFR results; or
  2.3 Both:
    2.3.1 The patient has discontinued gefitinib or erlotinib due to intolerance; and
    2.3.2 The cancer did not progress while on gefitinib or erlotinib; and
3 There is documentation confirming that the cancer expresses activating mutations of EGFR; and
4 Patient has an ECOG performance status 0-3; and
5 Baseline measurement of overall tumour burden is documented clinically and radiologically.

Continuation – NSCLC – first line

Re-assessment required after 6 months

response to or stable disease with treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period.

Initiation – NSCLC – second line

Re-assessment required after 4 months

All of the following:

1 Patient has locally advanced or metastatic, incurable, non-squamous non-small cell lung cancer (NSCLC); and
2 Patient has an ECOG performance status 0-3; and
3 The patient must have received previous treatment with erlotinib or gefitinib; and
4 There is documentation confirming that the cancer expresses T790M mutation of EGFR following progression on or after erlotinib or gefitinib; and
5 The treatment must be given as monotherapy; and

➥ **Restricted** (RS2034)

Initiation

Re-assessment required after 6 months

Either:

1 All of the following:
- 1.1 Patient has unresectable locally advanced or metastatic breast cancer; and
- 1.2 There is documentation confirming disease is hormone-receptor positive and HER2-negative; and
- 1.3 Patient has an ECOG performance score of 0-2; and
- 1.4 Either:
  - 1.4.1 Disease has relapsed or progressed during prior endocrine therapy; or
  - 1.4.2 Both:
    - 1.4.2.1 Patient is amenorrhoeic, either naturally or induced, with endocrine levels consistent with a postmenopausal or without menstrual-potential state; and
    - 1.4.2.2 Patient has not received prior systemic treatment for metastatic disease; and
- 1.5 Treatment must be used in combination with an endocrine partner; and
- 1.6 Patient has not received prior funded treatment with a CDK4/6 inhibitor; or

2 All of the following:
- 2.1 Patient has an active Special Authority approval for ribociclib; and
- 2.2 Patient has experienced a grade 3 or 4 adverse reaction to ribociclib that cannot be managed by dose reductions and requires treatment discontinuation; and
- 2.3 Treatment must be used in combination with an endocrine partner; and
- 2.4 There is no evidence of progressive disease since initiation of ribociclib.

Continuation

Re-assessment required after 12 months

Both:

1 Treatment must be used in combination with an endocrine partner; and
2 There is no evidence of progressive disease since initiation of palbociclib.

1 All of the following:
- 1.1 The patient has metastatic renal cell carcinoma of predominantly clear cell histology; and
- 1.2 Either:
  - 1.2.1 The patient is treatment naive; or
  - 1.2.2 The patient has only received prior cytokine treatment; and
- 1.3 The patient has an ECOG performance score of 0-2; and
  The patient has intermediate or poor prognosis defined as:
- 1.4 Any of the following:
  - 1.4.1 Lactate dehydrogenase level > 1.5 times upper limit of normal; or
  - 1.4.2 Haemoglobin level < lower limit of normal; or
  - 1.4.3 Corrected serum calcium level > 10 mg/dL (2.5 mmol/L); or
  - 1.4.4 Interval of < 1 year from original diagnosis to the start of systemic therapy; or
  - 1.4.5 Karnofsky performance score of less than or equal to 70; or
  - 1.4.6 2 or more sites of organ metastasis; or

2 All of the following:
- 2.1 The patient has metastatic renal cell carcinoma; and
- 2.2 The patient has discontinued sunitinib within 3 months of starting treatment due to intolerance; and
- 2.3 The cancer did not progress whilst on sunitinib; and
- 2.4 Pazopanib to be used for a maximum of 3 months.

Continuation

Re-assessment required after 3 months

No evidence of disease progression.

⬇	Cap 50 mg	694.62	28	Sunitinib Pfizer

➥ **Restricted** (RS2109)
Initiation – RCC
Re-assessment required after 4 months
Both:
1 The patient has metastatic renal cell carcinoma; and
2 The patient has not previously received funded sunitinib.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – RCC

Re-assessment required after 4 months

No evidence of disease progression.

Initiation – GIST

Re-assessment required after 3 months

Both:

1 The patient has unresectable or metastatic malignant gastrointestinal stromal tumour (GIST); and
2 Either:
  2.1 The patient's disease has progressed following treatment with imatinib; or
  2.2 The patient has documented treatment-limiting intolerance, or toxicity to, imatinib.

Continuation – GIST

Re-assessment required after 6 months

Both:

The patient has responded to treatment or has stable disease as determined by Choi's modified CT response evaluation criteria as follows:

1 Any of the following:
  1.1 The patient has had a complete response (disappearance of all lesions and no new lesions); or
  1.2 The patient has had a partial response (a decrease in size of 10% or more or decrease in tumour density in Hounsfield Units (HU) of 15% or more on CT and no new lesions and no obvious progression of non-measurable disease); or
  1.3 The patient has stable disease (does not meet criteria the two above) and does not have progressive disease and no symptomatic deterioration attributed to tumour progression; and
2 The treatment remains appropriate and the patient is benefiting from treatment.

Continuation – GIST pandemic circumstances

Re-assessment required after 6 months

All of the following:

1 The patient has unresectable or metastatic malignant gastrointestinal stromal tumour (GIST); and
2 The patient is clinically benefiting from treatment and continued treatment remains appropriate; and
3 Sunitinib is to be discontinued at progression; and
4 The regular renewal requirements cannot be met due to COVID-19 constraints on the health sector.

Note: GIST - It is recommended that response to treatment be assessed using Choi's modified CT response evaluation criteria (J Clin Oncol, 2007, 25:1753-1759). Progressive disease is defined as either: an increase in tumour size of 10% or more and not meeting criteria of partial response (PR) by tumour density (HU) on CT; or: new lesions, or new intratumoral nodules, or increase in the size of the existing intratumoral nodules.

TRAMETINIB – **Restricted** see terms below

⬇	Tab 2 mg	9,481.29	30	Mekinist

➥ **Restricted** (RS2132)

Initiation – stage III or IV resected melanoma - adjuvant

Any relevant practitioner

Re-assessment required after 4 months

Either:

1 The individual is currently on treatment with dabrafenib and trametinib and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Either:
    2.1.1 The individual has resected stage IIIB, IIIC, IIID or IV melanoma (excluding uveal) (see note a); or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1.2 Both:
2.1.2.1 The individual has received neoadjuvant treatment with a PD-1/PD-L1 inhibitor; and
2.1.2.2 Adjuvant treatment with trametinib is required; and
2.2 The individual has not received prior funded systemic treatment in the adjuvant setting for stage IIIB, IIIC, IIID or IV melanoma; and
2.3 Treatment must be adjuvant to complete surgical resection; and
2.4 Treatment must be initiated within 13 weeks of surgical resection, unless delay is necessary due to post-surgery recovery (see note b); and
2.5 The individual has a confirmed BRAF mutation; and
2.6 Trametinib must be administered in combination with dabrafenib; and
2.7 The individual has ECOG performance score 0-2.

Notes:
a) Stage IIIB, IIIC, IIID or IV melanoma defined as per American Joint Committee on Cancer (AJCC) 8th Edition
b) Initiating treatment within 13 weeks of complete surgical resection means 13 weeks after resection (primary or lymphadenectomy)

Continuation – stage III or IV resected melanoma - adjuvant
Any relevant practitioner
Re-assessment required after 4 months
Any of the following:
1 All of the following:
1.1 No evidence of disease recurrence; and
1.2 Trametinib must be administered in combination with dabrafenib; and
1.3 Treatment to be discontinued at signs of disease recurrence or at completion of 12 months' total treatment course, including any systemic neoadjuvant treatment; or
2 All of the following:
2.1 The individual has received adjuvant treatment with a BRAF/MEK inhibitor; and
2.2 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
2.3 The individual meets initiation criteria for trametinib for unresectable or metastatic melanoma; or
3 All of the following:
3.1 The individual has received adjuvant treatment with a BRAF/MEK inhibitor; and
3.2 The individual has received a BRAF/MEK inhibitor for unresectable or metastatic melanoma; and
3.3 The individual meets continuation criteria for trametinib for unresectable or metastatic melanoma.

Initiation – unresectable or metastatic melanoma
Any relevant practitioner
Re-assessment required after 4 months
Either:
1 The individual is currently on treatment with dabrafenib and trametinib and met all remaining criteria prior to commencing treatment; or
2 All of the following:
2.1 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
2.2 Baseline measurement of overall tumour burden is documented clinically and radiologically; and
2.3 The individual has ECOG performance score 0-2; and
2.4 The individual has confirmed BRAF mutation; and
2.5 Trametinib must be administered in combination with dabrafenib; and
2.6 Any of the following:
2.6.1 The individual has been diagnosed in the metastatic or unresectable stage III or IV setting; or
2.6.2 The individual did not receive treatment in the adjuvant setting with a BRAF/MEK inhibitor; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.6.3 All of the following:
- 2.6.3.1 The individual received treatment in the adjuvant setting with a BRAF/MEK inhibitor; and
- 2.6.3.2 The individual did not experience disease recurrence while on treatment with that BRAF/MEK inhibitor; and
- 2.6.3.3 The individual did not experience disease recurrence within six months of completing adjuvant treatment with a BRAF/MEK inhibitor.

Continuation – unresectable or metastatic melanoma
Any relevant practitioner
Re-assessment required after 4 months
Both:
1 Any of the following:
- 1.1 The individual's disease has had a complete response to treatment; or
- 1.2 The individual's disease has had a partial response to treatment; or
- 1.3 The individual has stable disease with treatment; and

2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period.

ABIRATERONE ACETATE – **Restricted** see terms below

⬇ Tab 250 mg	4,276.19	120	Zytiga

➥ **Restricted** (RS1888)

Initiation

Medical oncologist, radiation oncologist or urologist

Re-assessment required after 6 months

All of the following:

1 Patient has prostate cancer; and
2 Patient has metastases; and
3 Patient's disease is castration resistant; and
4 Either:
  4.1 All of the following:
    4.1.1 Patient is symptomatic; and
    4.1.2 Patient has disease progression (rising serum PSA) after second line anti-androgen therapy; and
    4.1.3 Patient has ECOG performance score of 0-1; and
    4.1.4 Patient has not had prior treatment with taxane chemotherapy; or
  4.2 All of the following:
    4.2.1 Patient's disease has progressed following prior chemotherapy containing a taxane; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4.2.2 Patient has ECOG performance score of 0-2; and
4.2.3 Patient has not had prior treatment with abiraterone.

Continuation
Medical oncologist, radiation oncologist or urologist
Re-assessment required after 6 months
All of the following:
1 Significant decrease in serum PSA from baseline; and
2 No evidence of clinical disease progression; and
3 No initiation of taxane chemotherapy with abiraterone; and
4 The treatment remains appropriate and the patient is benefiting from treatment.

Continuation – pandemic circumstances
Re-assessment required after 6 months
All of the following:
1 The patient is clinically benefiting from treatment and continued treatment remains appropriate; and
2 Abiraterone acetate to be discontinued at progression; and
3 No initiation of taxane chemotherapy with abiraterone; and
4 The regular renewal requirements cannot be met due to COVID-19 constraints on the health sector.

Long-acting Somatostatin Analogues

➦ **Restricted** (RS2100)

Initiation – Malignant bowel obstruction

All of the following:

1 The patient has nausea* and vomiting* due to malignant bowel obstruction*; and
2 Treatment with antiemetics, rehydration, antimuscarinic agents, corticosteroids and analgesics for at least 48 hours has not been successful; and
3 Treatment to be given for up to 4 weeks.

Note: Indications marked with * are unapproved indications

Initiation – acromegaly

Re-assessment required after 3 months

All of the following:

1 The patient has acromegaly; and
2 Either:
  2.1 Treatment with surgery and radiotherapy is not suitable or was unsuccessful; or
  2.2 Treatment is for an interim period while awaiting the beneficial effects of radiotherapy; and
3 Treatment with a dopamine agonist has been unsuccessful.

Continuation – acromegaly

Without reassessment for applications where IGF1 levels have decreased since starting treatment.

Note: In patients with acromegaly, treatment should be discontinued if IGF1 levels have no decreased 3 months after treatment. In patients treated with radiotherapy treatment should be withdrawn every 2 years, for 1 month, for assessment of remission. Treatment should be stopped where there is biochemical evidence of remission (normal IGF1 levels) following treatment withdrawal for at least 4 weeks.

Initiation – Other indications

Any of the following:

1 VIPomas and glucagonomas - for patients who are seriously ill in order to improve their clinical state prior to definitive surgery; or
2 Both:
  2.1 Gastrinoma; and
  2.2 Either:
    2.2.1 Surgery has been unsuccessful; or
    2.2.2 Patient has metastatic disease after treatment with H2 antagonist or proton pump inhibitors has been unsuccessful; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 Both:
- 3.1 Insulinomas; and
- 3.2 Surgery is contraindicated or has not been successful; or

4 For pre-operative control of hypoglycaemia and for maintenance therapy; or

5 Both:
- 5.1 Carcinoid syndrome (diagnosed by tissue pathology and/or urinary 5HIAA analysis); and
- 5.2 Disabling symptoms not controlled by maximal medical therapy.

Initiation – pre-operative acromegaly

Limited to 12 months treatment

All of the following:

1 Patient has acromegaly; and

2 Patient has a large pituitary tumour, greater than 10 mm at its widest; and

3 Patient is scheduled to undergo pituitary surgery in the next six months.

Notes: Indications marked with * are unapproved indications

The use of a long-acting somatostatin analogue in patients with fistulae, oesophageal varices, miscellaneous diarrhoea and hypotension will not be funded under Special Authority

Initiation – organ transplant recipients

Either:

1 For use in organ transplant recipients; or

2 The individual is receiving induction therapy for an organ transplant.

Initiation – non-transplant indications*

Any specialist

Both:

1 Patient requires long-term systemic immunosuppression; and

2 Either:

2.1 Ciclosporin has been trialled and discontinued treatment because of unacceptable side effects or inadequate clinical response; or

2.2 Patient is a child with nephrotic syndrome*.

Initiation – polyarticular course juvenile idiopathic arthritis

Rheumatologist or named specialist

Re-assessment required after 6 months

Either:

1 Both:

1.1 The patient has had an initial Special Authority approval for adalimumab for polyarticular course juvenile idiopathic arthritis (JIA); and

1.2 Either:

1.2.1 The patient has experienced intolerable side effects from adalimumab; or

1.2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for polyarticular course JIA; or

2 All of the following:

2.1 To be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and

2.2 Patient has had polyarticular course JIA for 6 months duration or longer; and

2.3 Any of the following:

2.3.1 At least 5 active joints and at least 3 joints with limited range of motion, pain or tenderness after a 3-month trial of methotrexate (at the maximum tolerated dose); or

2.3.2 Moderate or high disease activity (cJADAS10 score of at least 2.5) after a 3-month trial of methotrexate (at the maximum tolerated dose); or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.3.3 Low disease activity (cJADAS10 score between 1.1 and 2.5) after a 6-month trial of methotrexate.

Continuation – polyarticular course juvenile idiopathic arthritis
Rheumatologist or named specialist
Re-assessment required after 6 months
Both:

1 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2 Either:
  2.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count and an improvement in physician's global assessment from baseline; or
  2.2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

Initiation – oligoarticular course juvenile idiopathic arthritis
Rheumatologist or named specialist
Re-assessment required after 6 months
Either:

1 Both:
  1.1 The patient has had an initial Special Authority approval for adalimumab for oligoarticular course juvenile idiopathic arthritis (JIA); and
  1.2 Either:
    1.2.1 The patient has experienced intolerable side effects from adalimumab; or
    1.2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for oligoarticular course JIA; or
2 All of the following:
  2.1 To be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
  2.2 Patient has had oligoarticular course JIA for 6 months duration or longer; and
  2.3 Any of the following:
    2.3.1 At least 2 active joints with limited range of motion, pain or tenderness after a 3-month trial of methotrexate (at the maximum tolerated dose); or
    2.3.2 Moderate or high disease activity (cJADAS10 score greater than 1.5) with poor prognostic features after a 3-month trial of methotrexate (at the maximum tolerated dose); or
    2.3.3 High disease activity (cJADAS10 score greater than 4) after a 6-month trial of methotrexate.

Continuation – oligoarticular course juvenile idiopathic arthritis
Rheumatologist or named specialist
Re-assessment required after 6 months
Both:

1 Subsidised as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2 Either:
  2.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count and an improvement in physician's global assessment from baselinee; or
  2.2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Initiation – Arthritis - rheumatoid

Rheumatologist

Re-assessment required after 6 months

Either:

1 Both:
- 1.1 The patient has had an initial Special Authority approval for adalimumab for rheumatoid arthritis; and
- 1.2 Either:
  - 1.2.1 The patient has experienced intolerable side effects; or
  - 1.2.2 The patient has received insufficient benefit to meet the renewal criteria for rheumatoid arthritis; or

2 All of the following:
- 2.1 Patient has had rheumatoid arthritis (either confirmed by radiology imaging, or the patient is cyclic citrullinated peptide (CCP) antibody positive) for six months duration or longer; and
- 2.2 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
- 2.3 Patient has tried and not responded to at least three months of methotrexate at a maximum tolerated dose (unless contraindicated); and
- 2.4 Patient has tried and not responded to at least three months of methotrexate in combination with sulfasalazine and hydroxychloroquine sulphate at maximum tolerated doses (unless contraindicated); and
- 2.5 Either:
  - 2.5.1 Patient has tried and not responded to at least three months of methotrexate in combination with the maximum tolerated dose of ciclosporin; or
  - 2.5.2 Patient has tried and not responded to at least three months of therapy at the maximum tolerated dose of leflunomide alone or in combination with methotrexate; and
- 2.6 Either:
  - 2.6.1 Patient has persistent symptoms of poorly controlled and active disease in at least 15 swollen joints; or
  - 2.6.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip.

Continuation – Arthritis - rheumatoid

Any relevant practitioner

Re-assessment required after 2 years

All of the following:

1 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and

2 Either:
- 2.1 Following initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
- 2.2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; and

3 Etanercept to be administered at doses no greater than 50 mg every 7 days.

Initiation – ankylosing spondylitis

Rheumatologist

Re-assessment required after 6 months

Either:

1 Both:
- 1.1 The patient has had an initial Special Authority approval for adalimumab for ankylosing spondylitis; and
- 1.2 Either:
  - 1.2.1 The patient has experienced intolerable side effects from adalimumab; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for ankylosing spondylitis; or

2 All of the following:

2.1 Patient has a confirmed diagnosis of ankylosing spondylitis present for more than six months; and

2.2 Patient has low back pain and stiffness that is relieved by exercise but not by rest; and

2.3 Patient has bilateral sacroiliitis demonstrated by plain radiographs, CT or MRI scan; and

2.4 Patient's ankylosing spondylitis has not responded adequately to treatment with two or more non-steroidal anti-inflammatory drugs (NSAIDs), in combination with anti-ulcer therapy if indicated, while patient was undergoing at least 3 months of a regular exercise regimen for ankylosing spondylitis; and

2.5 Either:

2.5.1 Patient has limitation of motion of the lumbar spine in the sagittal and the frontal planes as determined by the following Bath Ankylosing Spondylitis Metrology Index (BASMI) measures: a modified Schober's test of less than or equal to 4 cm and lumbar side flexion measurement of less than or equal to 10 cm (mean of left and right); or

2.5.2 Patient has limitation of chest expansion by at least 2.5 cm below the average normal values corrected for age and gender (see Notes); and

2.6 Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) of at least 6 on a 0-10 scale.

Notes: The BASDAI must have been determined at the completion of the 3 month exercise trial, but prior to ceasing NSAID treatment. The BASDAI measure must be no more than 1 month old at the time of starting treatment.

Average normal chest expansion corrected for age and gender:

Age	Male	Female
18-24	7.0 cm	5.5 cm
25-34	7.5 cm	5.5 cm
35-44	6.5 cm	4.5 cm
45-54	6.0 cm	5.0 cm
55-64	5.5 cm	4.0 cm
65-74	4.0 cm	4.0 cm
75+	3.0 cm	2.5 cm

Continuation – ankylosing spondylitis

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Following 12 weeks' initial treatment and for subsequent renewals, treatment has resulted in an improvement in BASDAI of 4 or more points from pre-treatment baseline on a 10 point scale, or an improvement in BASDAI of 50%, whichever is less; and

2 Physician considers that the patient has benefited from treatment and that continued treatment is appropriate; and

3 Etanercept to be administered at doses no greater than 50 mg every 7 days.

Initiation – psoriatic arthritis

Rheumatologist

Re-assessment required after 6 months

Either:

1 Both:

1.1 The patient has had an initial Special Authority approval for adalimumab or secukinumab for psoriatic arthritis; and

1.2 Either:

1.2.1 The patient has experienced intolerable side effects from adalimumab or secukinumab; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2.2 The patient has received insufficient benefit from adalimumab or secukinumab to meet the renewal criteria for adalimumab or secukinumab for psoriatic arthritis; or

2 All of the following:

2.1 Patient has had severe active psoriatic arthritis for six months duration or longer; and

2.2 Patient has tried and not responded to at least three months of oral or parenteral methotrexate at a dose of at least 20 mg weekly or a maximum tolerated dose; and

2.3 Patient has tried and not responded to at least three months of sulfasalazine at a dose of at least 2 g per day or leflunomide at a dose of up to 20 mg daily (or maximum tolerated doses); and

2.4 Either:

2.4.1 Patient has persistent symptoms of poorly controlled and active disease in at least 15 swollen, tender joints; or

2.4.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

2.5 Any of the following:

2.5.1 Patient has a C-reactive protein level greater than 15 mg/L measured no more than one month prior to the date of this application; or

2.5.2 Patient has an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour; or

2.5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Continuation – psoriatic arthritis

Rheumatologist

Re-assessment required after 6 months

Both:

1 Either:

1.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or

1.2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior etanercept treatment in the opinion of the treating physician; and

2 Etanercept to be administered at doses no greater than 50 mg every 7 days.

Initiation – severe chronic plaque psoriasis, prior TNF use

Dermatologist

Limited to 4 months treatment

All of the following:

1 The patient has had an initial Special Authority approval for adalimumab for severe chronic plaque psoriasis; and

2 Either:

2.1 The patient has experienced intolerable side effects from adalimumab; or

2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for severe chronic plaque psoriasis; and

3 Patient must be reassessed for continuation after 3 doses.

Initiation – severe chronic plaque psoriasis, treatment-naive

Dermatologist

Limited to 4 months treatment

All of the following:

1 Any of the following:

1.1 Patient has "whole body" severe chronic plaque psoriasis with a Psoriasis Area and Severity Index (PASI) score of greater than 10, where lesions have been present for at least 6 months from the time of initial diagnosis; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2 Patient has severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot, where the plaque or plaques have been present for at least 6 months from the time of initial diagnosis; or

1.3 Patient has severe chronic localised genital or flexural plaque psoriasis where the plaques or lesions have been present for at least 6 months from the time of initial diagnosis, and with a Dermatology Life Quality Index (DLQI) score greater than 10; and

2 Patient has tried, but had an inadequate response (see Note) to, or has experienced intolerable side effects from, at least three of the following (at maximum tolerated doses unless contraindicated): phototherapy, methotrexate, ciclosporin, or acitretin; and

3 A PASI assessment or Dermatology Quality of Life Index (DLQI) assessment has been completed for at least the most recent prior treatment course (but preferably all prior treatment courses), preferably while still on treatment but no longer than 1 month following cessation of each prior treatment course; and

4 The most recent PASI or DLQI assessment is no more than 1 month old at the time of initiation.

Note: "Inadequate response" is defined as: for whole body severe chronic plaque psoriasis, a PASI score of greater than 10, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment; for severe chronic plaque psoriasis of the face, hand, foot, genital or flexural areas at least 2 of the 3 PASI symptom subscores for erythema, thickness and scaling are rated as severe or very severe, and for the face, palm of a hand or sole of a foot the skin area affected is 30% or more of the face, palm of a hand or sole of a foot, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment.

Continuation – severe chronic plaque psoriasis

Re-assessment required after 6 months

Both:

1 Any of the following:

1.1 Both:

1.1.1 Patient had "whole body" severe chronic plaque psoriasis at the start of treatment; and

1.1.2 Either:

1.1.2.1 Following each prior etanercept treatment course the patient has a PASI score which is reduced by 75% or more, or is sustained at this level, when compared with the pre-etanercept treatment baseline value; or

1.1.2.2 Following each prior etanercept treatment course the patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, when compared with the pre-treatment baseline value; or

1.2 Both:

1.2.1 Patient had severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot at the start of treatment; and

1.2.2 Either:

1.2.2.1 Following each prior etanercept treatment course the patient has a reduction in the PASI symptom subscores for all 3 of erythema, thickness and scaling, to slight or better, or sustained at this level, as compared to the treatment course baseline values; or

1.2.2.2 Following each prior etanercept treatment course the patient has a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-etanercept treatment baseline value; or

1.3 Both:

1.3.1 Patient had severe chronic localised genital or flexural plaque psoriasis at the start of treatment; and

1.3.2 Either:

1.3.2.1 The patient has experienced a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-treatment baseline value; or

1.3.2.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing etanercept; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Etanercept to be administered at doses no greater than 50 mg every 7 days.

Initiation – pyoderma gangrenosum

Dermatologist

All of the following:

1 Patient has pyoderma gangrenosum*; and
2 Patient has received three months of conventional therapy including a minimum of three pharmaceuticals (e.g. prednisone, ciclosporin, azathioprine, or methotrexate) and not received an adequate response; and
3 A maximum of 8 doses.

Note: Indications marked with * are unapproved indications.

Continuation – pyoderma gangrenosum

Dermatologist

All of the following:

1 Patient has shown clinical improvement; and
2 Patient continues to require treatment; and
3 A maximum of 8 doses.

Initiation – adult-onset Still's disease

Rheumatologist

Re-assessment required after 6 months

Either:

1 Both:
  1.1 Either:
    1.1.1 The patient has had an initial Special Authority approval for etanercept for adult-onset Still's disease (AOSD); or
    1.1.2 The patient has been started on tocilizumab for AOSD in a Health NZ Hospital; and
  1.2 Either:
    1.2.1 The patient has experienced intolerable side effects from etanercept and/or tocilizumab; or
    1.2.2 The patient has received insufficient benefit from at least a three-month trial of adalimumab and/or tocilizumab such that they do not meet the renewal criteria for AOSD; or
2 All of the following:
  2.1 Patient diagnosed with AOSD according to the Yamaguchi criteria (J Rheumatol 1992;19:424-430); and
  2.2 Patient has tried and not responded to at least 6 months of glucocorticosteroids at a dose of at least 0.5 mg/kg, non-steroidal antiinflammatory drugs (NSAIDs) and methotrexate; and
  2.3 Patient has persistent symptoms of disabling poorly controlled and active disease.

Continuation – adult-onset Still's disease

Rheumatologist

Re-assessment required after 6 months

The patient has a sustained improvement in inflammatory markers and functional status.

Initiation – undifferentiated spondyloarthritis

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Patient has undifferentiated peripheral spondyloarthritis* with active peripheral joint arthritis in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and
2 Patient has tried and not responded to at least three months of oral or parenteral methotrexate at a dose of at least 20 mg weekly or a maximum tolerated dose; and
3 Patient has tried and not responded to at least three months of sulfasalazine at a dose of at least 2 g per day (or maximum tolerated dose); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 Patient has tried and not responded to at least three months of leflunomide at a dose of up to 20 mg daily (or maximum tolerated dose); and
5 Any of the following:
  5.1 Patient has a C-reactive protein level greater than 15 mg/L measured no more than one month prior to the date of this application; or
  5.2 Patient has an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour measured no more than one month prior to the date of this application; or
  5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Note: Indications marked with * are unapproved indications.

Continuation – undifferentiated spondyloarthritis

Rheumatologist or medical practitioner on the recommendation of a Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
  1.1 Applicant is a rheumatologist; or
  1.2 Applicant is a Practitioner and confirms that a rheumatologist has provided a letter, email or fax recommending that the patient continues with etanercept treatment; and
2 Either:
  2.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
  2.2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior etanercept treatment in the opinion of the treating physician; and
3 Etanercept to be administered at doses no greater than 50 mg dose every 7 days.

Monoclonal Antibodies

ABCIXIMAB – **Restricted** see terms below

⬇ Inj 2 mg per ml, 5 ml vial

➥ **Restricted** (RS1202)

Initiation

Either:

1 For use in patients with acute coronary syndromes undergoing percutaneous coronary intervention; or
2 For use in patients undergoing intra-cranial intervention.

ADALIMUMAB (AMGEVITA) – **Restricted** see terms below

⬇	Inj 20 mg per 0.4 ml prefilled syringe – **5% DV Oct-22 to 31 Jul 2026**	190.00	1	**Amgevita**

➥ **Restricted** (RS2063)

Initiation – Behcet's disease - severe

Any relevant practitioner

Both:

1 The patient has severe Behcet's disease* that is significantly impacting the patient's quality of life; and
2 Either:
  2.1 The patient has severe ocular, neurological, and/or vasculitic symptoms and has not responded adequately to one or more treatment(s) appropriate for the particular symptom(s); or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2 The patient has severe gastrointestinal, rheumatological and/or mucocutaneous symptoms and has not responded adequately to two or more treatments appropriate for the particular symptom(s).

Note: Indications marked with * are unapproved indications.

Initiation – Hidradenitis suppurativa

Dermatologist

Re-assessment required after 4 months

All of the following:

1 Patient has hidradenitis suppurativa Hurley Stage II or Hurley Stage III lesions in distinct anatomic areas; and
2 Patient has tried, but had an inadequate response to at least a 90 day trial of systemic antibiotics or patient has demonstrated intolerance to or has contraindications for systemic antibiotics; and
3 Patient has 3 or more active lesions; and
4 The patient has a DLQI of 10 or more and the assessment is no more than 1 month old at time of application.

Continuation – Hidradenitis suppurativa

Any relevant practitioner

Re-assessment required after 2 years

Both:

1 The patient has a reduction in active lesions (e.g. inflammatory nodules, abscesses, draining fistulae) of 25% or more from baseline; and
2 The patient has a DLQI improvement of 4 or more from baseline.

Initiation – Plaque psoriasis - severe chronic

Dermatologist

Re-assessment required after 4 months

Either:

1 Both:
  1.1 Patient has had an initial Special Authority approval for etanercept for severe chronic plaque psoriasis; and
  1.2 Either:
    1.2.1 Patient has experienced intolerable side effects; or
    1.2.2 Patient has received insufficient benefit to meet the renewal criteria for etanercept for severe chronic plaque psoriasis; or
2 All of the following:
  2.1 Any of the following:
    2.1.1 Patient has "whole body" severe chronic plaque psoriasis with a (PASI) score of greater than 10, where lesions have been present for at least 6 months from the time of initial diagnosis; or
    2.1.2 Patient has severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot, where the plaque or plaques have been present for at least 6 months from the time of initial diagnosis; or
    2.1.3 Patient has severe chronic localised genital or flexural plaque psoriasis where the plaques or lesions have been present for at least 6 months from the time of initial diagnosis, and with a Dermatology Life Quality Index (DLQI) score greater than 10; and
  2.2 Patient has tried, but had an inadequate response to, or has experienced intolerable side effects from, at least three of the following (at maximum tolerated doses unless contraindicated): phototherapy, methotrexate, ciclosporin, or acitretin; and
  2.3 A PASI assessment or (DLQI) assessment has been completed for at least the most recent prior treatment course but no longer than 1 month following cessation of each prior treatment course and is no more than 1 month old at the time of application.

Continuation – Plaque psoriasis - severe chronic

Re-assessment required after 2 years

Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Both:
  1.1 Patient had "whole body" severe chronic plaque psoriasis at the start of treatment; and
  1.2 Either:
    1.2.1 The patient has experienced a 75% or more reduction in PASI score, or is sustained at this level, when compared with the pre-treatment baseline value; or
    1.2.2 The patient has a DLQI improvement of 5 or more, when compared with the pre-treatment baseline value; or

2 Both:
  2.1 Patient had severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot at the start of treatment; and
  2.2 Either:
    2.2.1 The patient has experienced a reduction in the PASI symptom subscores for all 3 of erythema, thickness and scaling, to slight or better, or sustained at this level, as compared to the treatment course baseline values; or
    2.2.2 The patient has experienced a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-treatment baseline value; or

3 Both:
  3.1 Patient had severe chronic localised genital or flexural plaque psoriasis at the start of treatment; and
  3.2 Either:
    3.2.1 The patient has experienced a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-treatment baseline value; or
    3.2.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing adalimumab.

Initiation – pyoderma gangrenosum
Dermatologist
Both:

1 Patient has pyoderma gangrenosum*; and
2 Patient has received three months of conventional therapy including a minimum of three pharmaceuticals (e.g. prednisone, ciclosporin, azathioprine, or methotrexate) and not received an adequate response.

Note: Indications marked with * are unapproved indications.

Initiation – Crohn's disease - adults
Any relevant practitioner
Re-assessment required after 6 months
All of the following:

1 Patient has severe active Crohn's disease; and
2 Any of the following:
  2.1 Patient has a CDAI score of greater than or equal to 300 or HBI score of greater than or equal to 10; or
  2.2 Patient has extensive small intestine disease affecting more than 50 cm of the small intestine; or
  2.3 Patient has evidence of short gut syndrome or would be at risk of short gut syndrome with further bowel resection; or
  2.4 Patient has an ileostomy or colostomy and has intestinal inflammation; and
3 Patient has tried but had an inadequate response to, or has experienced intolerable side effects from, prior therapy with immunomodulators and corticosteroids.

Continuation – Crohn's disease - adults
Any relevant practitioner
Re-assessment required after 2 years
Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 CDAI score has reduced by 100 points from the CDAI score, or HBI score has reduced 3 points, from when the patient was initiated on adalimumab; or
2 CDAI score is 150 or less, or HBI is 4 or less; or
3 The patient has demonstrated an adequate response to treatment, but CDAI score and/or HBI score cannot be assessed.

Initiation – Crohn's disease - children
Any relevant practitioner
Re-assessment required after 6 months
All of the following:

1 Paediatric patient has active Crohn's disease; and
2 Either:
  2.1 Patient has a PCDAI score of greater than or equal to 30; or
  2.2 Patient has extensive small intestine disease; and
3 Patient has tried but had an inadequate response to, or has experienced intolerable side effects from, prior therapy with immunomodulators and corticosteroids.

Continuation – Crohn's disease - children
Any relevant practitioner
Re-assessment required after 2 years
Any of the following:

1 PCDAI score has reduced by 10 points from the PCDAI score when the patient was initiated on adalimumab; or
2 PCDAI score is 15 or less; or
3 The patient has demonstrated an adequate response to treatment but PCDAI score cannot be assessed.

Initiation – Crohn's disease - fistulising
Any relevant practitioner
Re-assessment required after 6 months
All of the following:

1 Patient has confirmed Crohn's disease; and
2 Any of the following:
  2.1 Patient has one or more complex externally draining enterocutaneous fistula(e); or
  2.2 Patient has one or more rectovaginal fistula(e); or
  2.3 Patient has complex peri-anal fistula; and
3 A Baseline Fistula Assessment has been completed and is no more than 1 month old at the time of application.

Continuation – Crohn's disease - fistulising
Any relevant practitioner
Re-assessment required after 2 years
Either:

1 The number of open draining fistulae have decreased from baseline by at least 50%; or
2 There has been a marked reduction in drainage of all fistula(e) from baseline as demonstrated by a reduction in the Fistula Assessment score, together with less induration and patient-reported pain.

Initiation – Ocular inflammation - chronic
Any relevant practitioner
Re-assessment required after 4 months
Either:

1 The patient has had an initial Special Authority approval for infliximab for chronic ocular inflammation; or
2 Both:
  2.1 Patient has severe uveitis uncontrolled with treatment of steroids and other immunosuppressants with a severe risk of vision loss; and
  2.2 Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.1 Patient is 18 years or older and treatment with at least two other immunomodulatory agents has proven ineffective; or
2.2.2 Patient is under 18 years and treatment with methotrexate has proven ineffective or is not tolerated at a therapeutic dose; or
2.2.3 Patient is under 8 years and treatment with steroids or methotrexate has proven ineffective or is not tolerated at a therapeutic dose; or disease requires control to prevent irreversible vision loss prior to achieving a therapeutic dose of methotrexate.

Continuation – Ocular inflammation - chronic
Any relevant practitioner
Re-assessment required after 2 years
Any of the following:
1 The patient has had a good clinical response following 12 weeks' initial treatment; or
2 Following each 2 year treatment period, the patient has had a sustained reduction in inflammation (Standardisation of Uveitis Nomenclature (SUN) criteria < ½+ anterior chamber or vitreous cells, absence of active vitreous or retinal lesions, or resolution of uveitic cystoid macular oedema); or
3 Following each 2 year treatment period, the patient has a sustained steroid sparing effect, allowing reduction in prednisone to < 10mg daily, or steroid drops less than twice daily if under 18 years old.

Initiation – Ocular inflammation - severe
Any relevant practitioner
Re-assessment required after 4 months
Either:
1 Patient has had an initial Special Authority approval for infliximab for severe ocular inflammation; or
2 Both:
2.1 Patient has severe, vision-threatening ocular inflammation requiring rapid control; and
2.2 Any of the following:
2.2.1 Treatment with high-dose steroids (intravenous methylprednisolone) followed by high dose oral steroids has proven ineffective at controlling symptoms; or
2.2.2 Patient developed new inflammatory symptoms while receiving high dose steroids; or
2.2.3 Patient is aged under 8 years and treatment with high dose oral steroids and other immunosuppressants has proven ineffective at controlling symptoms.

Continuation – Ocular inflammation - severe
Any relevant practitioner
Re-assessment required after 2 years
Any of the following:
1 The patient has had a good clinical response following 3 initial doses; or
2 Following each 2 year treatment period, the patient has had a sustained reduction in inflammation (Standardisation of Uveitis Nomenclature (SUN) criteria < ½+ anterior chamber or vitreous cells, absence of active vitreous or retinal lesions, or resolution of uveitic cystoid macular oedema); or
3 Following each 2 year treatment period, the patient has a sustained steroid sparing effect, allowing reduction in prednisone to < 10mg daily, or steroid drops less than twice daily if under 18 years old.

Initiation – ankylosing spondylitis
Rheumatologist
Re-assessment required after 6 months
Either:
1 Both:
1.1 Patient has had an initial Special Authority approval for etanercept for ankylosing spondylitis; and
1.2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2.1 The patient has experienced intolerable side effects; or
1.2.2 The patient has received insufficient benefit to meet the renewal criteria for ankylosing spondylitis; or

2 All of the following:
2.1 Patient has a confirmed diagnosis of ankylosing spondylitis for more than six months; and
2.2 Patient has low back pain and stiffness that is relieved by exercise but not by rest; and
2.3 Patient has bilateral sacroiliitis demonstrated by radiology imaging; and
2.4 Patient has not responded adequately to treatment with two or more NSAIDs, while patient was undergoing at least 3 months of a regular exercise regimen for ankylosing spondylitis; and
2.5 Either:
2.5.1 Patient has limitation of motion of the lumbar spine in the sagittal and the frontal planes as determined by the following BASMI measures: a modified Schober's test of less than or equal to 4 cm and lumbar side flexion measurement of less than or equal to 10 cm (mean of left and right); or
2.5.2 Patient has limitation of chest expansion by at least 2.5 cm below the average normal values corrected for age and gender; and
2.6 A BASDAI of at least 6 on a 0-10 scale completed after the 3 month exercise trial, but prior to ceasing any previous pharmacological treatment and is no more than 1 month old at the time of application.

Continuation – ankylosing spondylitis
Any relevant practitioner
Re-assessment required after 2 years
For applications where treatment has resulted in an improvement in BASDAI of 4 or more points from pre-treatment baseline on a 10 point scale, or an improvement in BASDAI of 50%, whichever is less.

Initiation – Arthritis - oligoarticular course juvenile idiopathic
Named specialist or rheumatologist
Re-assessment required after 6 months
Either:

1 Both:
1.1 The patient has had an initial Special Authority approval for etanercept for oligoarticular course juvenile idiopathic arthritis (JIA); and
1.2 Either:
1.2.1 Patient has experienced intolerable side effects; or
1.2.2 Patient has received insufficient benefit to meet the renewal criteria for oligoarticular course JIA; or

2 All of the following:
2.1 To be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2.2 Patient has had oligoarticular course JIA for 6 months duration or longer; and
2.3 Either:
2.3.1 At least 2 active joints with limited range of motion, pain or tenderness after a 3-month trial of methotrexate (at the maximum tolerated dose); or
2.3.2 Moderate or high disease activity (cJADAS10 score greater than 1.5) with poor prognostic features after a 3-month trial of methotrexate (at the maximum tolerated dose).

Continuation – Arthritis - oligoarticular course juvenile idiopathic
Any relevant practitioner
Re-assessment required after 2 years
Either:

1 Following initial treatment, the patient has at least a 50% decrease in active joint count and an improvement in physician's global assessment from baseline; or
2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

continued improvement in physician's global assessment from baseline.

Initiation – Arthritis - polyarticular course juvenile idiopathic

Named specialist or rheumatologist

Re-assessment required after 6 months

Either:

1 Both:
- 1.1 Patient has had an initial Special Authority approval for etanercept for polyarticular course juvenile idiopathic arthritis (JIA); and
- 1.2 Either:
  - 1.2.1 Patient has experienced intolerable side effects; or
  - 1.2.2 Patient has received insufficient benefit to meet the renewal criteria for polyarticular course JIA; or

2 All of the following:
- 2.1 To be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
- 2.2 Patient has had polyarticular course JIA for 6 months duration or longer; and
- 2.3 Any of the following:
  - 2.3.1 At least 5 active joints and at least 3 joints with limited range of motion, pain or tenderness after a 3-month trial of methotrexate (at the maximum tolerated dose); or
  - 2.3.2 Moderate or high disease activity (cJADAS10 score of at least 2.5) after a 3-month trial of methotrexate (at the maximum tolerated dose); or
  - 2.3.3 Low disease activity (cJADAS10 score between 1.1 and 2.5) after a 6-month trial of methotrexate.

Continuation – Arthritis - polyarticular course juvenile idiopathic

Any relevant practitioner

Re-assessment required after 2 years

Either:

1 Following initial treatment, the patient has at least a 50% decrease in active joint count and an improvement in physician's global assessment from baseline; or

2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

Initiation – Arthritis - psoriatic

Rheumatologist

Re-assessment required after 6 months

Either:

1 Both:
- 1.1 Patient has had an initial Special Authority approval for etanercept or secukinumab for psoriatic arthritis; and
- 1.2 Either:
  - 1.2.1 Patient has experienced intolerable side effects; or
  - 1.2.2 Patient has received insufficient benefit to meet the renewal criteria for psoriatic arthritis; or

2 All of the following:
- 2.1 Patient has had active psoriatic arthritis for six months duration or longer; and
- 2.2 Patient has tried and not responded to at least three months of methotrexate at a maximum tolerated dose (unless contraindicated); and
- 2.3 Patient has tried and not responded to at least three months of sulfasalazine or leflunomide at maximum tolerated doses (unless contraindicated); and
- 2.4 Either:
  - 2.4.1 Patient has persistent symptoms of poorly controlled and active disease in at least 15 swollen joints; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.4.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

2.5 Any of the following:

2.5.1 Patient has CRP level greater than 15 mg/L measured no more than one month prior to the date of this application; or
2.5.2 Patient has an elevated ESR greater than 25 mm per hour; or
2.5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Continuation – Arthritis - psoriatic
Any relevant practitioner
Re-assessment required after 2 years
Either:

1 Following initial treatment, the patient has at least a 50% decrease in swollen joint count from baseline and a clinically significant response in the opinion of the physician; or
2 Patient demonstrates at least a continuing 30% improvement in swollen joint count from baseline and a clinically significant response in the opinion of the treating physician.

Initiation – Arthritis - rheumatoid
Rheumatologist
Re-assessment required after 6 months
Either:

1 Both:

1.1 The patient has had an initial Special Authority approval for etanercept for rheumatoid arthritis; and
1.2 Either:

1.2.1 The patient has experienced intolerable side effects; or
1.2.2 The patient has received insufficient benefit from etanercept to meet the renewal criteria for rheumatoid arthritis; or

2 All of the following:

2.1 Patient has had rheumatoid arthritis (either confirmed by radiology imaging, or the patient is cyclic citrullinated peptide (CCP) antibody positive) for six months duration or longer; and
2.2 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2.3 Patient has tried and not responded to at least three months of methotrexate at a maximum tolerated dose (unless contraindicated); and
2.4 Patient has tried and not responded to at least three months of methotrexate in combination with sulfasalazine and hydroxychloroquine sulphate at maximum tolerated doses (unless contraindicated); and
2.5 Either:

2.5.1 Patient has tried and not responded to at least three months of methotrexate in combination with the maximum tolerated dose of ciclosporin; or
2.5.2 Patient has tried and not responded to at least three months of therapy at the maximum tolerated dose of leflunomide alone or in combination with methotrexate; and

2.6 Either:

2.6.1 Patient has persistent symptoms of poorly controlled and active disease in at least 15 swollen joints; or
2.6.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – Arthritis - rheumatoid
Any relevant practitioner
Re-assessment required after 2 years
Either:

1 Following initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician.

Initiation – Still's disease - adult-onset (AOSD)
Rheumatologist
Either:

1 Both:
  1.1 The patient has had an initial Special Authority approval for etanercept and/or tocilizumab for (AOSD); and
  1.2 Either:
    1.2.1 Patient has experienced intolerable side effects from etanercept and/or tocilizumab; or
    1.2.2 Patient has received insufficient benefit from at least a three-month trial of etanercept and/or tocilizumab; or
2 All of the following:
  2.1 Patient diagnosed with AOSD according to the Yamaguchi criteria; and
  2.2 Patient has tried and not responded to at least 6 months of glucocorticosteroids at a dose of at least 0.5 mg/kg, NSAIDs and methotrexate; and
  2.3 Patient has persistent symptoms of disabling poorly controlled and active disease.

Initiation – ulcerative colitis
Any relevant practitioner
Re-assessment required after 6 months
All of the following:

1 Patient has active ulcerative colitis; and
2 Either:
  2.1 Patient's SCCAI score is greater than or equal to 4; or
  2.2 Patient's PUCAI score is greater than or equal to 20; and
3 Patient has tried but had an inadequate response to, or has experienced intolerable side effects from, prior therapy with immunomodulators and systemic corticosteroids; and
4 Surgery (or further surgery) is considered to be clinically inappropriate.

Continuation – ulcerative colitis
Any relevant practitioner
Re-assessment required after 2 years
Either:

1 The SCCAI score has reduced by 2 points or more from the SCCAI score when the patient was initiated on biologic therapy; or
2 The PUCAI score has reduced by 10 points or more from the PUCAI score when the patient was initiated on biologic therapy.

Initiation – undifferentiated spondyloarthiritis
Rheumatologist
Re-assessment required after 6 months
All of the following:

1 Patient has undifferentiated peripheral spondyloarthritis* with active peripheral joint arthritis in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Patient has tried and not responded to at least three months of each of methotrexate, sulphasalazine and leflunomide, at maximum tolerated doses (unless contraindicated); and
3 Any of the following:
  3.1 Patient has a CRP level greater than 15 mg/L measured no more than one month prior to the date of this application; or
  3.2 Patient has an ESR greater than 25 mm per hour measured no more than one month prior to the date of this application; or
  3.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Note: Indications marked with * are unapproved indications.

Continuation – undifferentiated spondyloarthiritis

Any relevant practitioner

Re-assessment required after 2 years

Either:

1 Following initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response in the opinion of the treating physician.

Initiation – inflammatory bowel arthritis – axial

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Patient has a diagnosis of active ulcerative colitis or active Crohn's disease; and
2 Patient has axial inflammatory pain for six months or more; and
3 Patient is unable to take NSAIDs; and
4 Patient has unequivocal sacroiliitis demonstrated by radiological imaging or MRI; and
5 Patient has not responded adequately to prior treatment consisting of at least 3 months of an exercise regime supervised by a physiotherapist; and
6 A BASDAI of at least 6 on a 0-10 scale completed after the 3 month exercise trial, but prior to ceasing any previous pharmacological treatment.

Continuation – inflammatory bowel arthritis – axial

Any relevant practitioner

Re-assessment required after 2 years

Where treatment has resulted in an improvement in BASDAI of 4 or more points from pre-treatment baseline on a 10 point scale, or an improvement in BASDAI of 50%, whichever is less.

Initiation – inflammatory bowel arthritis – peripheral

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Patient has a diagnosis of active ulcerative colitis or active Crohn's disease; and
2 Patient has active arthritis in at least four joints from the following: hip, knee, ankle, subtalar, tarsus, forefoot, wrist, elbow, shoulder, sternoclavicular; and
3 Patient has tried and not experienced a response to at least three months of methotrexate, or azathioprine at a maximum tolerated dose (unless contraindicated); and
4 Patient has tried and not experienced a response to at least three months of sulphasalazine at a maximum tolerated dose (unless contraindicated); and
5 Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

5.1 Patient has a CRP level greater than 15 mg/L measured no more than one month prior to the date of this application; or
5.2 Patient has an ESR greater than 25 mm per hour; or
5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Continuation – inflammatory bowel arthritis – peripheral
Any relevant practitioner
Re-assessment required after 2 years
Either:
1 Following initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
2 Patient demonstrates at least a continuing 30% improvement in active joint count from baseline in the opinion of the treating physician.

ADALIMUMAB (HUMIRA - ALTERNATIVE BRAND) – **Restricted** see terms below

➥ **Restricted** (RS1922)
Initiation – Behcet's disease – severe
Any relevant practitioner
Re-assessment required after 6 months
All of the following:
1 Either:
1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Behcet's disease – severe
Any relevant practitioner
Re-assessment required after 6 months
Both:
1 The patient has had a good clinical response to treatment with measurably improved quality of life; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Hidradenitis suppurativa
Dermatologist or Practitioner on the recommendation of a dermatologist
Re-assessment required after 6 months
All of the following:
1 Either:
1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 Adalimumab to be administered at doses no greater than 40 mg every 7 days. Fortnightly dosing has been considered.

Continuation – Hidradenitis suppurativa
Dermatologist or Practitioner on the recommendation of a dermatologist
Re-assessment required after 6 months
All of the following:

1 The patient has a reduction in active lesions (e.g. inflammatory nodules, abscesses, draining fistulae) of 25% or more from baseline; and
2 The patient has a Dermatology Quality of Life Index improvement of 4 or more from baseline; and
3 Adalimumab is to be administered at doses no greater than 40mg every 7 days. Fortnightly dosing has been considered.

Initiation – Psoriasis - severe chronic plaque
Dermatologist or Practitioner on the recommendation of a dermatologist
Re-assessment required after 6 months
All of the following:

1 Either:
  1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
  1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Psoriasis - severe chronic plaque
Dermatologist or Practitioner on the recommendation of a dermatologist
Re-assessment required after 6 months
Both:

1 Either:
  1.1 Both:
    1.1.1 Patient had "whole body" severe chronic plaque psoriasis at the start of treatment; and
    1.1.2 Either:
      1.1.2.1 Following each prior adalimumab treatment course the patient has a PASI score which is reduced by 75% or more, or is sustained at this level, when compared with the pre-adalimumab treatment baseline value; or
      1.1.2.2 Following each prior adalimumab treatment course the patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, when compared with the pre-treatment baseline value; or
  1.2 Both:
    1.2.1 Patient had severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot at the start of treatment; and
    1.2.2 Either:
      1.2.2.1 Following each prior adalimumab treatment course the patient has a reduction in the PASI symptom subscores for all 3 of erythema, thickness and scaling, to slight or better, or sustained at this level, as compared to the treatment course baseline values; or
      1.2.2.2 Following each prior adalimumab treatment course the patient has a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-adalimumab treatment baseline value; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Pyoderma gangrenosum
Dermatologist
Re-assessment required after 6 months
All of the following:

1 Either:
  1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
  1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 A maximum of 8 doses.

Continuation – Pyoderma gangrenosum
Dermatologist
Re-assessment required after 6 months
Both:

1 The patient has demonstrated clinical improvement and continues to require treatment; and
2 A maximum of 8 doses.

Initiation – Crohn's disease - adult
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
All of the following:

1 Any of the following:
  1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita; or
  1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita and clinician attributes this loss of disease response to a change in treatment regimen; or
  1.3 Patient has Crohn's and is considered to be at risk of disease destabilisation if there were to be a change to current treatment; and
2 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
3 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Crohn's disease - adult
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
Both:

1 Any of the following:
  1.1 CDAI score has reduced by 100 points from the CDAI score when the patient was initiated on adalimumab; or
  1.2 CDAI score is 150 or less; or
  1.3 The patient has demonstrated an adequate response to treatment, but CDAI score cannot be assessed; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Crohn's disease - children
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
All of the following:

1 Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita and clinician attributes this loss of disease response to a change in treatment regimen; or
1.3 Patient has Crohn's and is considered to be at risk of disease destabilisation if there were to be a change to current treatment; and

2 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
3 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Crohn's disease - children
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
Both:

1 Any of the following:
1.1 PCDAI score has reduced by 10 points from the PCDAI score when the patient was initiated on adalimumab; or
1.2 PCDAI score is 15 or less; or
1.3 The patient has demonstrated an adequate response to treatment, but PCDAI score cannot be assessed; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Crohn's disease - fistulising
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
All of the following:

1 Any of the following:
1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita and clinician attributes this loss of disease response to a change in treatment regimen; or
1.3 Patient has Crohn's and is considered to be at risk of disease destabilisation if there were to be a change to current treatment; and
2 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
3 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Crohn's disease - fistulising
Gastroenterologist or Practitioner on the recommendation of a gastroenterologist
Re-assessment required after 6 months
Both:

1 Either:
1.1 The number of open draining fistulae have decreased from baseline by at least 50%; or
1.2 There has been a marked reduction in drainage of all fistula(e) from baseline as demonstrated by a reduction in the Fistula Assessment score, together with less induration and patient-reported pain; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Ocular inflammation – chronic
Any relevant practitioner
Re-assessment required after 12 months
All of the following:

1 Any of the following:

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with Amgevita, and a maximum of 6 months treatment with Amgevita and clinician attributes this loss of disease response to a change in treatment regimen; or
1.3 Patient has uveitis and is considered to be at risk of vision loss if they were to change treatment; and

2 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
3 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Ocular inflammation – chronic
Any relevant practitioner
Re-assessment required after 12 months
Both:

1 Any of the following:

1.1 The patient has had a good clinical response following 12 weeks' initial treatment; or
1.2 Following each 12-month treatment period, the patient has had a sustained reduction in inflammation (Standardisation of Uveitis Nomenclature (SUN) criteria < ½+ anterior chamber or vitreous cells, absence of active vitreous or retinal lesions, or resolution of uveitic cystoid macular oedema); or
1.3 Following each 12-month treatment period, the patient has a sustained steroid sparing effect, allowing reduction in prednisone to < 10mg daily, or steroid drops less than twice daily if under 18 years old; and

2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Ocular inflammation – severe
Any relevant practitioner
Re-assessment required after 12 months
All of the following:

1 Any of the following:

1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment, and a maximum of 6 months treatment with Amgevita; or
1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with Amgevita, and a maximum of 6 months treatment with Amgevita and clinician attributes this loss of disease response to a change in treatment regimen; or

Initiation – ankylosing spondylitis

Rheumatologist or Practitioner on the recommendation of a rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
   1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
   1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita); and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – ankylosing spondylitis

Rheumatologist or Practitioner on the recommendation of a rheumatologist

Re-assessment required after 6 months

Both:

1 Treatment has resulted in an improvement in BASDAI of 4 or more points from pre-treatment baseline on a 10 point scale, or an improvement in BASDAI of 50%, whichever is less; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Arthritis – oligoarticular course juvenile idiopathic

Named specialist or rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
   1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
   1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication.

Continuation – Arthritis – oligoarticular course juvenile idiopathic

Named specialist or rheumatologist

Re-assessment required after 6 months

For patients that demonstrate at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

Initiation – Arthritis - polyarticular course juvenile idiopathic

Named specialist or rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
   1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
   1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Continuation – Arthritis - polyarticular course juvenile idiopathic

Named specialist or rheumatologist

Re-assessment required after 6 months

For patients that demonstrate at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

Initiation – Arthritis - psoriatic

Named specialist or rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
  1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
  1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Continuation – Arthritis - psoriatic

Named specialist or rheumatologist

Re-assessment required after 6 months

Both:

1 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior adalimumab treatment in the opinion of the treating physician; and
2 Adalimumab to be administered at doses no greater than 40 mg every 14 days.

Initiation – Arthritis – rheumatoid

Rheumatologist or Practitioner on the recommendation of a rheumatologist

Re-assessment required after 6 months

All of the following:

1 Either:
  1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
  1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and
2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication; and
4 Either:
  4.1 Adalimumab to be administered at doses no greater than 40 mg every 14 days; or
  4.2 Patient cannot take concomitant methotrexate and requires doses of adalimumab higher than 40 mg every 14 days to maintain an adequate response.

Continuation – Arthritis – rheumatoid

Rheumatologist or Practitioner on the recommendation of a rheumatologist

Re-assessment required after 6 months

Both:

1 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior adalimumab treatment in the opinion of the treating physician; and
2 Either:
  2.1 Adalimumab to be administered at doses no greater than 40 mg every 14 days; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2 Patient cannot take concomitant methotrexate and requires doses of adalimumab higher than 40 mg every 14 days to maintain an adequate response.

Initiation – Still's disease – adult-onset (AOSD)
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
All of the following:

1 Either:
- 1.1 The patient has experienced intolerable side effects from adalimumab (Amgevita) following a minimum of 4 weeks treatment; or
- 1.2 Patient has developed symptoms of loss of disease control following a minimum of 4 weeks treatment with adalimumab (Amgevita) and clinician attributes this loss of disease response to a change in treatment regimen; and

2 Patient has received a maximum of 6 months treatment with Amgevita; and
3 Patient has previously had a Special Authority approval for the Humira brand of adalimumab for this indication.

Continuation – Still's disease – adult-onset (AOSD)
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
the patient has demonstrated a sustained improvement in inflammatory markers and functional status.

AFLIBERCEPT – **Restricted** see terms below

⬇ Inj 40 mg per ml, 0.1 ml vial	1,250.00	1	Eylea

➥ **Restricted** (RS1872)

Initiation – Wet Age Related Macular Degeneration
Ophthalmologist or nurse practitioner
Re-assessment required after 3 months
Either:

1 All of the following:
- 1.1 Any of the following:
  - 1.1.1 Wet age-related macular degeneration (wet AMD); or
  - 1.1.2 Polypoidal choroidal vasculopathy; or
  - 1.1.3 Choroidal neovascular membrane from causes other than wet AMD; and
- 1.2 Either:
  - 1.2.1 The patient has developed severe endophthalmitis or severe posterior uveitis following treatment with bevacizumab; or
  - 1.2.2 There is worsening of vision or failure of retina to dry despite three intraocular injections of bevacizumab four weeks apart; and
- 1.3 There is no structural damage to the central fovea of the treated eye; and
- 1.4 Patient has not previously been treated with ranibizumab for longer than 3 months; or

2 Either:
- 2.1 Patient has current approval to use ranibizumab for treatment of wAMD and was found to be intolerant to ranibizumab within 3 months; or
- 2.2 Patient has previously* (*before June 2018) received treatment with ranibizumab for wAMD and disease was stable while on treatment.

Continuation – Wet Age Related Macular Degeneration
Ophthalmologist or nurse practitioner
Re-assessment required after 12 months
All of the following:

1 Documented benefit must be demonstrated to continue; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Patient's vision is 6/36 or better on the Snellen visual acuity score; and
3 There is no structural damage to the central fovea of the treated eye.

Initiation – Diabetic Macular Oedema
Ophthalmologist or nurse practitioner
Re-assessment required after 4 months
All of the following:

1 Patient has centre involving diabetic macular oedema (DMO); and
2 Patient's disease is non responsive to 4 doses of intravitreal bevacizumab when administered 4-6 weekly; and
3 Patient has reduced visual acuity between 6/9 – 6/36 with functional awareness of reduction in vision; and
4 Patient has DMO within central OCT (ocular coherence tomography) subfield > 350 micrometers; and
5 There is no centre-involving sub-retinal fibrosis or foveal atrophy.

Continuation – Diabetic Macular Oedema
Ophthalmologist or nurse practitioner
Re-assessment required after 12 months
All of the following:

1 There is stability or two lines of Snellen visual acuity gain; and
2 There is structural improvement on OCT scan (with reduction in intra-retinal cysts, central retinal thickness, and sub-retinal fluid); and
3 Patient's vision is 6/36 or better on the Snellen visual acuity score; and
4 There is no centre-involving sub-retinal fibrosis or foveal atrophy; and
5 After each consecutive 12 months treatment with aflibercept, patient has retrialled with at least one injection of bevacizumab and had no response.

BASILIXIMAB – **Restricted** see terms below

⬇	Inj 20 mg vial	2,560.00	1	Simulect

➥ **Restricted** (RS1203)
Initiation
For use in solid organ transplants.

BENRALIZUMAB – **Restricted** see terms below

⬇	Inj 30 mg per ml, 1 ml prefilled pen	3,539.00	1	Fasenra

➥ **Restricted** (RS1920)
Initiation – Severe eosinophilic asthma
Respiratory physician or clinical immunologist
Re-assessment required after 12 months
All of the following:

1 Patient must be aged 12 years or older; and
2 Patient must have a diagnosis of severe eosinophilic asthma documented by a respiratory physician or clinical immunologist; and
3 Conditions that mimic asthma eg. vocal cord dysfunction, central airway obstruction, bronchiolitis etc. have been excluded; and
4 Patient has a blood eosinophil count of greater than 0.5 × 10^9 cells/L in the last 12 months; and
5 Patient must be adherent to optimised asthma therapy including inhaled corticosteroids (equivalent to at least 1000 mcg per day of fluticasone propionate) plus long-acting beta-2 agonist, or budesonide/formoterol as part of the anti-inflammatory reliever therapy plus maintenance regimen, unless contraindicated or not tolerated; and
6 Either:
  6.1 Patient has had at least 4 exacerbations needing systemic corticosteroids in the previous 12 months, where an exacerbation is defined as either documented use of oral corticosteroids for at least 3 days or parenteral corticosteroids; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

6.2 Patient has received continuous oral corticosteroids of at least the equivalent of 10 mg per day over the previous 3 months; and

7 Treatment is not to be used in combination with subsidised mepolizumab; and

8 Patient has an Asthma Control Test (ACT) score of 10 or less. Baseline measurements of the patient's asthma control using the ACT and oral corticosteroid dose must be made at the time of application, and again at around 52 weeks after the first dose to assess response to treatment; and

9 Either:

9.1 Patient has not previously received an anti-IL5 biological therapy for their severe eosinophilic asthma; or

9.2 Both:

9.2.1 Patient was refractory or intolerant to previous anti-IL5 biological therapy; and

9.2.2 Patient was not eligible to continue treatment with previous anti-IL5 biological therapy and discontinued within 12 months of commencing treatment.

Continuation – Severe eosinophilic asthma

Respiratory physician or clinical immunologist

Re-assessment required after 2 years

Both:

1 An increase in the Asthma Control Test (ACT) score of at least 5 from baseline; and

2 Either:

2.1 Exacerbations have been reduced from baseline by 50% as a result of treatment with benralizumab; or

2.2 Reduction in continuous oral corticosteroid use by 50% or by 10 mg/day while maintaining or improving asthma control.

BEVACIZUMAB – **Restricted** see terms below

⬇	Inj 25 mg per ml, 4 ml vial – **10% DV Aug-25 to 31 Aug 2028**	69.00	1	**Vegzelma**
⬇	Inj 25 mg per ml, 16 ml vial – **10% DV Aug-25 to 31 Aug 2028**	276.00	1	**Vegzelma**

➥ **Restricted** (RS2111)

Initiation – unresectable hepatocellular carcinoma

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with bevacizumab, and met all remaining criteria prior to commencing treatment; or

2 All of the following:

2.1 Patient has locally advanced or metastatic, unresectable hepatocellular carcinoma; and

2.2 Patient has preserved liver function (Child-Pugh A); and

2.3 Transarterial chemoembolisation (TACE) is unsuitable; and

2.4 Any of the following:

2.4.1 Patient has not received prior systemic therapy for the treatment of hepatocellular carcinoma; or

2.4.2 Patient received funded lenvatinib before 1 March 2025; or

2.4.3 Both:

2.4.3.1 Patient has experienced treatment-limiting toxicity from treatment with lenvatinib; and

2.4.3.2 No disease progression since initiation of lenvatinib; and

2.5 Patient has an ECOG performance status of 0-2; and

2.6 To be given in combination with atezolizumab.

Continuation – unresectable hepatocellular carcinoma

Re-assessment required after 6 months

no evidence of disease progression.

Initiation – advanced or metastatic ovarian cancer

Re-assessment required after 4 months

All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Either:
  1.1 The patient has FIGO Stage IV epithelial ovarian, fallopian tube, or primary peritoneal cancer; or
  1.2 Both:
    1.2.1 The patient has previously untreated advanced (FIGO Stage IIIB or IIIC) epithelial ovarian, fallopian tube, or primary peritoneal cancer; and
    1.2.2 Either:
      1.2.2.1 Debulking surgery is inappropriate; or
      1.2.2.2 The cancer is sub-optimally debulked (maximum diameter of any gross residual disease greater than 1cm); and
2 Bevacizumab to be administered at a maximum dose of 15 mg/kg every three weeks; and
3 18 weeks concurrent treatment with chemotherapy is planned.

Continuation – advanced or metastatic ovarian cancer
Re-assessment required after 4 months
no evidence of disease progression.

Initiation – Recurrent Respiratory Papillomatosis
Re-assessment required after 12 months
All of the following:
1 Maximum of 6 doses; and
2 The patient has recurrent respiratory papillomatosis; and
3 The treatment is for intra-lesional administration.

Continuation – Recurrent Respiratory Papillomatosis
Re-assessment required after 12 months
All of the following:
1 Maximum of 6 doses; and
2 The treatment is for intra-lesional administration; and
3 There has been a reduction in surgical treatments or disease regrowth as a result of treatment.

Initiation – Ocular Conditions
Either:
1 Ocular neovascularisation; or
2 Exudative ocular angiopathy.

BEVACIZUMAB (OCULAR) – **Restricted** see terms below
⬇ Inj 25 mg per ml, 4 ml vial
⬇ Inj 25 mg per ml, 16 ml vial
➥ **Restricted** (RS1691)

Initiation – Recurrent Respiratory Papillomatosis
Otolaryngologist
Re-assessment required after 12 months
All of the following:
1 Maximum of 6 doses; and
2 The patient has recurrent respiratory papillomatosis; and
3 The treatment is for intra-lesional administration.

Continuation – Recurrent Respiratory Papillomatosis
Otolaryngologist
Re-assessment required after 12 months
All of the following:
1 Maximum of 6 doses; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 The treatment is for intra-lesional administration; and
3 There has been a reduction in surgical treatments or disease regrowth as a result of treatment.

Initiation – ocular conditions

Either:

1 Ocular neovascularisation; or
2 Exudative ocular angiopathy.

BRENTUXIMAB VEDOTIN – **Restricted** see terms below

⬇	Inj 50 mg vial	5,275.18	1	Adcetris

➥ **Restricted** (RS2002)

Initiation – relapsed/refractory Hodgkin lymphoma

Re-assessment required after 6 months

All of the following:

1 Either:
  1.1 Both:
    1.1.1 Patient has relapsed/refractory CD30-positive Hodgkin lymphoma after two or more lines of chemotherapy; and
    1.1.2 Patient is ineligible for autologous stem cell transplant; or
  1.2 Both:
    1.2.1 Patient has relapsed/refractory CD30-positive Hodgkin lymphoma; and
    1.2.2 Patient has previously undergone autologous stem cell transplant; and
2 Patient has not previously received funded brentuximab vedotin; and
3 Response to brentuximab vedotin treatment is to be reviewed after a maximum of 6 treatment cycles; and
4 Brentuximab vedotin to be administered at doses no greater than 1.8 mg/kg every 3 weeks.

Continuation – relapsed/refractory Hodgkin lymphoma

Re-assessment required after 9 months

All of the following:

1 Patient has achieved a partial or complete response to brentuximab vedotin after 6 treatment cycles; and
2 Treatment remains clinically appropriate and the patient is benefitting from treatment and treatment is being tolerated; and
3 Patient is to receive a maximum of 16 total cycles of brentuximab vedotin treatment.

Initiation – anaplastic large cell lymphoma

Re-assessment required after 9 months

All of the following:

1 Patient has relapsed/refractory CD30-positive systemic anaplastic large cell lymphoma; and
2 Patient has an ECOG performance status of 0-1; and
3 Patient has not previously received brentuximab vedotin; and
4 Response to brentuximab vedotin treatment is to be reviewed after a maximum of 6 treatment cycles; and
5 Brentuximab vedotin to be administered at doses no greater than 1.8 mg/kg every 3 weeks.

Continuation – anaplastic large cell lymphoma

Re-assessment required after 9 months

All of the following:

1 Patient has achieved a partial or complete response to brentuximab vedotin after 6 treatment cycles; and
2 Treatment remains clinically appropriate and the patient is benefitting from treatment and treatment is being tolerated; and
3 Patient is to receive a maximum of 16 total cycles of brentuximab vedotin treatment.

CETUXIMAB – **Restricted** see terms on the next page

⬇	Inj 5 mg per ml, 20 ml vial	364.00	1	Erbitux
⬇	Inj 5 mg per ml, 100 ml vial	1,820.00	1	Erbitux

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS2064)

Initiation – head and neck cancer, locally advanced

All of the following:

1 Patient has locally advanced, non-metastatic, squamous cell cancer of the head and neck; and
2 Cisplatin is contraindicated or has resulted in intolerable side effects; and
3 Patient has an ECOG performance score of 0-2; and
4 To be administered in combination with radiation therapy.

Initiation – colorectal cancer, metastatic

Re-assessment required after 6 months

All of the following:

1 Patient has metastatic colorectal cancer located on the left side of the colon (see Note); and
2 There is documentation confirming disease is RAS and BRAF wild-type; and
3 Patient has an ECOG performance score of 0-2; and
4 Patient has not received prior funded treatment with cetuximab; and
5 Either:
  5.1 Cetuximab is to be used in combination with chemotherapy; or
  5.2 Chemotherapy is determined to not be in the best interest of the patient based on clinician assessment.

Continuation – colorectal cancer, metastatic

Re-assessment required after 6 months

No evidence of disease progression.

Note: Left-sided colorectal cancer comprises of the distal one-third of the transverse colon, the splenic flexure, the descending colon, the sigmoid colon, or the rectum.

GEMTUZUMAB OZOGAMICIN – **Restricted** see terms below

⬇	Inj 5 mg vial	12,973.00	1	Mylotarg

➥ **Restricted** (RS1923)

Initiation

All of the following:

1 Patient has not received prior chemotherapy for this condition; and
2 Patient has de novo CD33-positive acute myeloid leukaemia; and
3 Patient does not have acute promyelocytic leukaemia; and
4 Gemtuzumab ozogamicin will be used in combination with standard anthracycline and cytarabine (AraC); and
5 Patient is being treated with curative intent; and
6 Patient's disease risk has been assessed by cytogenetic testing to be good or intermediate; and
7 Patient must be considered eligible for standard intensive remission induction chemotherapy with standard anthracycline and cytarabine (AraC); and
8 Gemtuzumab ozogamicin to be funded for one course only (one dose at 3 mg per m^2 body surface area or up to 2 vials of 5 mg as separate doses).

Note: Acute myeloid leukaemia excludes acute promyelocytic leukaemia and acute myeloid leukaemia that is secondary to another haematological disorder (eg myelodysplasia or myeloproliferative disorder).

INFLIXIMAB – **Restricted** see terms below

⬇	Inj 100 mg	428.00	1	Remicade

➥ **Restricted** (RS2124)

Initiation – Graft vs host disease

Patient has steroid-refractory acute graft vs. host disease of the gut.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Initiation – rheumatoid arthritis

Rheumatologist

Re-assessment required after 4 months

All of the following:

1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept for rheumatoid arthritis; and
2 Either:
  2.1 The patient has experienced intolerable side effects from a reasonable trial of adalimumab and/or etanercept; or
  2.2 Following at least a four month trial of adalimumab and/or etanercept, the patient did not meet the renewal criteria for adalimumab and/or etanercept; and
3 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance.

Continuation – rheumatoid arthritis

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2 Either:
  2.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
  2.2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; and
3 Infliximab to be administered at doses no greater than 3 mg/kg every 8 weeks.

Initiation – ankylosing spondylitis

Rheumatologist

Re-assessment required after 3 months

Both:

1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept for ankylosing spondylitis; and
2 Either:
  2.1 The patient has experienced intolerable side effects from a reasonable trial of adalimumab and/or etanercept; or
  2.2 Following 12 weeks of adalimumab and/or etanercept treatment, the patient did not meet the renewal criteria for adalimumab and/or etanercept for ankylosing spondylitis.

Continuation – ankylosing spondylitis

Rheumatologist

Re-assessment required after 6 months

All of the following:

1 Following 12 weeks of infliximab treatment, BASDAI has improved by 4 or more points from pre-infliximab baseline on a 10 point scale, or by 50%, whichever is less; and
2 Physician considers that the patient has benefited from treatment and that continued treatment is appropriate; and
3 Infliximab to be administered at doses no greater than 5 mg/kg every 6-8 weeks.

Initiation – psoriatic arthritis

Rheumatologist

Re-assessment required after 4 months

Both:

1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept and/or secukinumab for psoriatic arthritis; and
2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1 The patient has experienced intolerable side effects from a reasonable trial of adalimumab and/or etanercept and/or secukinumab; or

2.2 Following 3-4 months' initial treatment with adalimumab and/or etanercept and/or secukinumab, the patient did not meet the renewal criteria for adalimumab and/or etanercept and/or secukinumab for psoriatic arthritis. .

Continuation – psoriatic arthritis

Rheumatologist

Re-assessment required after 6 months

Both:

1 Either:

1.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or

1.2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior infliximab treatment in the opinion of the treating physician; and

2 Infliximab to be administered at doses no greater than 5 mg/kg every 8 weeks.

Initiation – severe ocular inflammation

Re-assessment required after 4 months

Either:

1 Both:

1.1 The patient has had an initial Special Authority approval for adalimumab for severe ocular inflammation; and

1.2 Either:

1.2.1 The patient has experienced intolerable side effects from adalimumab; or

1.2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for severe ocular inflammation; or

2 Both:

2.1 Patient has severe, vision-threatening ocular inflammation requiring rapid control; and

2.2 Any of the following:

2.2.1 Treatment with high-dose steroids (intravenous methylprednisolone) followed by high dose oral steroids has proven ineffective at controlling symptoms; or

2.2.2 Patient developed new inflammatory symptoms while receiving high dose steroids; or

2.2.3 Patient is aged under 8 years and treatment with high dose oral steroids and other immunosuppressants has proven ineffective at controlling symptoms.

Continuation – severe ocular inflammation

Re-assessment required after 12 months

Any of the following:

1 The patient has had a good clinical response following 3 initial doses; or

2 Following each 12-month treatment period, the patient has had a sustained reduction in inflammation (Standardisation of Uveitis Nomenclature (SUN) criteria < ½+ anterior chamber or vitreous cells, absence of active vitreous or retinal lesions, or resolution of uveitic cystoid macular oedema); or

3 Following each 12-month treatment period, the patient has a sustained steroid sparing effect, allowing reduction in prednisone to < 10mg daily, or steroid drops less than twice daily if under 18 years old.

Note: A trial withdrawal should be considered after every 24 months of stability, unless the patient is deemed to have extremely high risk of irreversible vision loss if infliximab is withdrawn.

Initiation – chronic ocular inflammation

Re-assessment required after 4 months

Either:

1 Both:

1.1 The patient has had an initial Special Authority approval for adalimumab for chronic ocular inflammation; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.2 Either:

1.2.1 The patient has experienced intolerable side effects from adalimumab; or
1.2.2 The patient has received insufficient benefit from adalimumab to meet the renewal criteria for adalimumab for chronic ocular inflammation; or

2 Both:

2.1 Patient has severe uveitis uncontrolled with treatment of steroids and other immunosuppressants with a severe risk of vision loss; and
2.2 Any of the following:

2.2.1 Patient is 18 years or older and treatment with at least two other immunomodulatory agents has proven ineffective; or
2.2.2 Patient is under 18 years and treatment with methotrexate has proven ineffective or is not tolerated at therapeutic dose; or
2.2.3 Patient is under 8 years and treatment with steroids or methotrexate has proven ineffective or is not tolerated at a therapeutic dose; or disease requires control to prevent irreversible vision loss prior to achieving a therapeutic dose of methotrexate.

Continuation – chronic ocular inflammation
Re-assessment required after 12 months
Any of the following:

1 The patient has had a good clinical response following 3 initial doses; or
2 Following each 12-month treatment period, the patient has had a sustained reduction in inflammation (Standardisation of Uveitis Nomenclature (SUN) criteria < ½+ anterior chamber or vitreous cells, absence of active vitreous or retinal lesions, or resolution of uveitic cystoid macular oedema); or
3 Following each 12-month treatment period, the patient has a sustained steroid sparing effect, allowing reduction in prednisone to < 10mg daily, or steroid drops less than twice daily if under 18 years old.

Note: A trial withdrawal should be considered after every 24 months of stability, unless the patient is deemed to have extremely high risk of irreversible vision loss if infliximab is withdrawn.

Initiation – Pulmonary sarcoidosis
Both:

1 Patient has life-threatening pulmonary sarcoidosis that is refractory to other treatments; and
2 Treatment is to be prescribed by, or has been recommended by, a physician with expertise in the treatment of pulmonary sarcoidosis.

Initiation – Crohn's disease (adults)
Any relevant practitioner
Re-assessment required after 6 months
All of the following:

1 Patient has active Crohn's disease; and
2 Any of the following:

2.1 Patient has a CDAI score of greater than or equal to 300, or HBI score of greater than or equal to 10; or
2.2 Patient has extensive small intestine disease affecting more than 50 cm of the small intestine; or
2.3 Patient has evidence of short gut syndrome or would be at risk of short gut syndrome with further bowel resection; or
2.4 Patient has an ileostomy or colostomy, and has intestinal inflammation; and

3 Patient has tried but had an inadequate response to, or has experienced intolerable side effects from, prior therapy with immunomodulators and corticosteroids.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – Crohn's disease (adults)

Any relevant practitioner

Re-assessment required after 2 years

Both:

1 Any of the following:
  1.1 CDAI score has reduced by 100 points from the CDAI score, or HBI score has reduced by 3 points, from when the patient was initiated on infliximab; or
  1.2 CDAI score is 150 or less, or HBI is 4 or less; or
  1.3 The patient has demonstrated an adequate response to treatment but CDAI score and/or HBI score cannot be assessed; and
2 Infliximab to be administered at doses up to 5 mg/kg every 8 weeks. Up to 10 mg/kg every 8 weeks (or equivalent) can be used for up to 3 doses if required for secondary non-response to treatment for re-induction. Another re-induction may be considered sixteen weeks after completing the last re-induction cycle.

Initiation – Crohn's disease (children)

Any relevant practitioner

Re-assessment required after 6 months

All of the following:

1 Paediatric patient has active Crohn's disease; and
2 Either:
  2.1 Patient has a PCDAI score of greater than or equal to 30; or
  2.2 Patient has extensive small intestine disease; and
3 Patient has tried but experienced an inadequate response to, or intolerable side effects from, prior therapy with immunomodulators and corticosteroids.

Continuation – Crohn's disease (children)

Any relevant practitioner

Re-assessment required after 2 years

Both:

1 Any of the following:
  1.1 PCDAI score has reduced by 10 points from the PCDAI score when the patient was initiated on infliximab; or
  1.2 PCDAI score is 15 or less; or
  1.3 The patient has demonstrated an adequate response to treatment but PCDAI score cannot be assessed; and
2 Infliximab to be administered at doses up to 5 mg/kg every 8 weeks. Up to 10 mg/kg every 8 weeks (or equivalent) can be used for up to 3 doses if required for secondary non-response to treatment for re-induction. Another re-induction may be considered sixteen weeks after completing the last re-induction cycle.

Initiation – fistulising Crohn's disease

Gastroenterologist

Re-assessment required after 6 months

Both:

1 Patient has confirmed Crohn's disease; and
2 Any of the following:
  2.1 Patient has one or more complex externally draining enterocutaneous fistula(e); or
  2.2 Patient has one or more rectovaginal fistula(e); or
  2.3 Patient has complete peri-anal fistula.

Continuation – fistulising Crohn's disease

Any relevant practitioner

Re-assessment required after 2 years

Both:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Either:

1.1 The number of open draining fistulae have decreased from baseline by at least 50%; or

1.2 There has been a marked reduction in drainage of all fistula(e) from baseline (in the case of adult patients, as demonstrated by a reduction in the Fistula Assessment score), together with less induration and patient reported pain; and

2 Infliximab to be administered at doses up to 5 mg/kg every 8 weeks. Up to 10 mg/kg every 8 weeks (or equivalent) can be used for up to 3 doses if required for secondary non-response to treatment for re-induction. Another re-induction may be considered sixteen weeks after completing the last re-induction cycle.

Initiation – acute fulminant ulcerative colitis

Gastroenterologist

Limited to 6 weeks treatment

Both:

1 Patient has acute, fulminant ulcerative colitis; and

2 Treatment with intravenous or high dose oral corticosteroids has not been successful.

Continuation – fulminant ulcerative colitis

Any relevant practitioner

Re-assessment required after 2 years

Both:

1 Where maintenance treatment is considered appropriate, infliximab should be used in combination with immunomodulators and reassessed every 6 months; and

2 Infliximab to be administered at doses up to 5 mg/kg every 8 weeks. Up to 10 mg/kg every 8 weeks (or equivalent) can be used for up to 3 doses if required for secondary non-response to treatment for re-induction. Another re-induction may be considered sixteen weeks after completing the last re-induction cycle.

Initiation – ulcerative colitis

Any relevant practitioner

Re-assessment required after 6 months

All of the following:

1 Patient has active ulcerative colitis; and

2 Either:

2.1 Patients SCCAI is greater than or equal to 4; or

2.2 Patients PUCAI score is greater than or equal to 20; and

3 Patient has experienced an inadequate response to, or intolerable side effects from, prior therapy with immunomodulators and systemic corticosteroids.

Continuation – ulcerative colitis

Any relevant practitioner

Re-assessment required after 2 years

Both:

1 Either:

1.1 The SCCAI score has reduced by 2 points or more from the SCCAI score when the patient was initiated on infliximab; or

1.2 The PUCAI score has reduced by 30 points or more from the PUCAI score when the patient was initiated on infliximab; and

2 Infliximab to be administered at doses up to 5 mg/kg every 8 weeks. Up to 10 mg/kg every 8 weeks (or equivalent) can be used for up to 3 doses if required for secondary non-response to treatment for re-induction. Another re-induction may be considered sixteen weeks after completing the last re-induction cycle.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Initiation – plaque psoriasis

Dermatologist

Re-assessment required after 3 doses

Either:

1 Both:

1.1 Patient has had an initial Special Authority approval for adalimumab, etanercept or secukinumab for severe chronic plaque psoriasis; and

1.2 Either:

1.2.1 Patient has experienced intolerable side effects from adalimumab, etanercept or secukinumab; or

1.2.2 Patient has received insufficient benefit from adalimumab, etanercept or secukinumab to meet the renewal criteria for adalimumab, etanercept or secukinumab for severe chronic plaque psoriasis; or

2 All of the following:

2.1 Any of the following:

2.1.1 Patient has "whole body" severe chronic plaque psoriasis with a Psoriasis Area and Severity Index (PASI) score of greater than 10, where lesions have been present for at least 6 months from the time of initial diagnosis; or

2.1.2 Patient has severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot, where the plaque or plaques have been present for at least 6 months from the time of initial diagnosis; or

2.1.3 Patient has severe chronic localised genital or flexural plaque psoriasis where the plaques or lesions have been present for at least 6 months from the time of initial diagnosis, and with a Dermatology Life Quality Index (DLQI) score greater than 10; and

2.2 Patient has tried, but had an inadequate response (see Note) to, or has experienced intolerable side effects from, at least three of the following (at maximum tolerated doses unless contraindicated): phototherapy, methotrexate, cyclosporin, or acitretin; and

2.3 A PASI assessment has been completed for at least the most recent prior treatment course (but preferably all prior treatment courses), preferably while still on treatment but no longer than 1 month following cessation of each prior treatment course; and

2.4 The most recent PASI assessment is no more than 1 month old at the time of initiation.

Note: "Inadequate response" is defined as: for whole body severe chronic plaque psoriasis, a PASI score of greater than 10, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment; for severe chronic plaque psoriasis of the face, hand, foot, genital or flexural areas at least 2 of the 3 PASI symptom subscores for erythema, thickness and scaling are rated as severe or very severe, and for the face, palm of a hand or sole of a foot the skin area affected is 30% or more of the face, palm of a hand or sole of a foot, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment.

Continuation – plaque psoriasis

Re-assessment required after 3 doses

Both:

1 Any of the following:

1.1 Both:

1.1.1 Patient had "whole body" severe chronic plaque psoriasis at the start of treatment; and

1.1.2 Following each prior infliximab treatment course the patient has a PASI score which is reduced by 75% or more, or is sustained at this level, when compared with the pre-infliximab treatment baseline value; or

1.2 Both:

1.2.1 Patient had severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot at the start of treatment; and

1.2.2 Either:

1.2.2.1 Following each prior infliximab treatment course the patient has a reduction in the PASI symptom

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

subscores for all 3 of erythema, thickness and scaling, to slight or better, or sustained at this level, as compared to the treatment course baseline values; or

1.2.2.2 Following each prior infliximab treatment course the patient has a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-infliximab treatment baseline value; or

1.3 Both:

1.3.1 Patient had severe chronic localised genital or flexural plaque psoriasis at the start of treatment; and

1.3.2 Either:

1.3.2.1 The patient has experienced a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-treatment baseline value; or

1.3.2.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing infliximab; and

2 Infliximab to be administered at doses no greater than 5 mg/kg every 8 weeks.

Initiation – neurosarcoidosis

Neurologist

Re-assessment required after 18 months

All of the following:

1 Biopsy consistent with diagnosis of neurosarcoidosis; and

2 Patient has CNS involvement; and

3 Patient has steroid-refractory disease; and

4 Either:

4.1 IV cyclophosphamide has been tried; or

4.2 Treatment with IV cyclophosphamide is clinically inappropriate.

Continuation – neurosarcoidosis

Neurologist

Re-assessment required after 18 months

Either:

1 A withdrawal period has been tried and the patient has relapsed; or

2 All of the following:

2.1 A withdrawal period has been considered but would not be clinically appropriate; and

2.2 There has been a marked reduction in prednisone dose; and

2.3 Either:

2.3.1 There has been an improvement in MRI appearances; or

2.3.2 Marked improvement in other symptomology.

Initiation – severe Behcet's disease

Re-assessment required after 4 months

All of the following:

1 The patient has severe Behcet's disease which is significantly impacting the patient's quality of life (see Notes); and

2 Either:

2.1 The patient has severe ocular, neurological and/or vasculitic symptoms and has not responded adequately to one or more treatment(s) appropriate for the particular symptom(s) (see Notes); or

2.2 The patient has severe gastrointestinal, rheumatologic and/or mucocutaneous symptoms and has not responded adequately to two or more treatment appropriate for the particular symptom(s) (see Notes); and

3 The patient is experiencing significant loss of quality of life.

Notes:

a) Behcet's disease diagnosed according to the International Study Group for Behcet's Disease. Lancet 1990;335(8697):1078-80. Quality of life measured using an appropriate quality of life scale such as that published in

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Gilworth et al J Rheumatol. 2004;31:931-7.

b) Treatments appropriate for the particular symptoms are those that are considered standard conventional treatments for these symptoms, for example intravenous/oral steroids and other immunosuppressants for ocular symptoms; azathioprine, steroids, thalidomide, interferon alpha and ciclosporin for mucocutaneous symptoms; and colchicine, steroids and methotrexate for rheumatological symptoms.

Continuation – severe Behcet's disease

Re-assessment required after 6 months

Both:

1 Patient has had a good clinical response to initial treatment with measurably improved quality of life; and
2 Infliximab to be administered at doses no greater than 5 mg/kg every 8 weeks.

Initiation – pyoderma gangrenosum

Dermatologist

All of the following:

1 Patient has pyoderma gangrenosum*; and
2 Patient has received three months of conventional therapy including a minimum of three pharmaceuticals (e.g. prednisone, ciclosporin, azathioprine, or methotrexate) and not received an adequate response; and
3 A maximum of 8 doses.

Note: Indications marked with * are unapproved indications.

Continuation – pyoderma gangrenosum

Dermatologist

All of the following:

1 Patient has shown clinical improvement; and
2 Patient continues to require treatment; and
3 A maximum of 8 doses.

Initiation – Inflammatory bowel arthritis (axial)

Re-assessment required after 6 months

All of the following:

1 Patient has a diagnosis of active ulcerative colitis or active Crohn's disease; and
2 Patient has had axial inflammatory pain for six months or more; and
3 Patient is unable to take NSAIDs; and
4 Patient has unequivocal sacroiliitis demonstrated by radiological imaging or MRI; and
5 Patient has not experienced an adequate response to prior treatment consisting of at least 3 months of an exercise regime supervised by a physiotherapist; and
6 Patient has a BASDAI of at least 6 on a 0-10 scale completed after the 3 month exercise trial, but prior to ceasing any previous pharmacological treatment .

Continuation – Inflammatory bowel arthritis (axial)

Re-assessment required after 2 years

Where treatment has resulted in an improvement in BASDAI of 4 or more points from pre-treatment baseline on a 10-point scale, or an improvement in BASDAI of 50%, whichever is less.

Initiation – Inflammatory bowel arthritis (peripheral)

Re-assessment required after 6 months

All of the following:

1 Patient has a diagnosis of active ulcerative colitis or active Crohn's disease; and
2 Patient has active arthritis in at least four joints from the following: hip, knee, ankle, subtalar, tarsus, forefoot, wrist, elbow, shoulder, sternoclavicular; and
3 Patient has tried and not experienced a response to at least three months of methotrexate or azathioprine at a maximum tolerated dose (unless contraindicated); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 Patient has tried and not experienced a response to at least three months of sulfasalazine at a maximum tolerated dose (unless contraindicated); and
5 Any of the following:
5.1 Patient has a CRP level greater than 15 mg/L measured no more than one month prior to the date of this application; or
5.2 Patient has an ESR greater than 25 mm per hour measured no more than one month prior to the date of this application; or
5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Continuation – Inflammatory bowel arthritis (peripheral)
Re-assessment required after 2 years
Either:
1 Following initial treatment, patient has experienced at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
2 Patient has experienced at least a continuing 30% improvement in active joint count from baseline in the opinion of the treating physician.

Initiation – immune checkpoint inhibitor toxicity in malignancy*
Any relevant practitioner
Re-assessment required after 4 months
All of the following:
1 The individual requires treatment for moderate to severe autoimmune toxicity following immune checkpoint inhibitor treatment for malignancy; and
2 The individual has received insufficient benefit from use of corticosteroids; and
3 Infliximab is to be administered at up to 5mg/kg for up to four doses.

Continuation – immune checkpoint inhibitor toxicity in malignancy*
Any relevant practitioner
Re-assessment required after 4 months
Both:
1 The individual has shown clinical improvement and ongoing treatment is required; and
2 Infliximab is to be administered at up to 5mg/kg for up to a total of 8 doses.

Note: Indications marked with * are unapproved indications.

INOTUZUMAB OZOGAMICIN – **Restricted** see terms below

⬇ Inj 1 mg vial	14,457.00	1	Besponsa

➥ **Restricted** (RS2112)
Initiation
Re-assessment required after 4 months
All of the following:
1 Patient has relapsed or refractory CD22-positive B-cell acute lymphoblastic leukaemia/lymphoma, including minimal residual disease; and
2 Patient has ECOG performance status of 0-2; and
3 Either:
3.1 Both:
3.1.1 Patient has Philadelphia chromosome positive B-Cell ALL; and
3.1.2 Patient has previously received a tyrosine kinase inhibitor; or
3.2 Patient has received one prior line of treatment involving intensive chemotherapy; and
4 Treatment is to be administered for a maximum of 3 cycles.

continued…

continued…

Continuation

Re-assessment required after 4 months

All of the following:

1 Patient is not proceeding to a stem cell transplant; and
2 Either:
  2.1 Patient has experienced complete disease response; or
  2.2 Patient has experienced complete remission with incomplete haematological recovery; and
3 Treatment with inotuzumab ozogamicin is to cease after a total duration of 6 cycles.

MEPOLIZUMAB – **Restricted** see terms below

⬇	Inj 100 mg prefilled pen	1,638.00	1	Nucala
⬇	Inj 100 mg vial			

➥ **Restricted** (RS2024)

Initiation – Severe eosinophilic asthma

Respiratory physician or clinical immunologist

Re-assessment required after 12 months

All of the following:

1 Patient must be aged 12 years or older; and
2 Patient must have a diagnosis of severe eosinophilic asthma documented by a respiratory physician or clinical immunologist; and
3 Conditions that mimic asthma eg. vocal cord dysfunction, central airway obstruction, bronchiolitis etc. have been excluded; and
4 Patient has a blood eosinophil count of greater than 0.5 × 10^9 cells/L in the last 12 months; and
5 Patient must be adherent to optimised asthma therapy including inhaled corticosteroids (equivalent to at least 1000 mcg per day of fluticasone propionate) plus long acting beta-2 agonist, or budesonide/formoterol as part of the single maintenance and reliever therapy regimen, unless contraindicated or not tolerated; and
6 Either:
  6.1 Patient has had at least 4 exacerbations needing systemic corticosteroids in the previous 12 months, where an exacerbation is defined as either documented use of oral corticosteroids for at least 3 days or parenteral corticosteroids; or
  6.2 Patient has received continuous oral corticosteroids of at least the equivalent of 10 mg per day over the previous 3 months; and
7 Treatment is not to be used in combination with subsidised benralizumab; and
8 Patient has an Asthma Control Test (ACT) score of 10 or less. Baseline measurements of the patient's asthma control using the ACT and oral corticosteroid dose must be made at the time of application, and again at around 52 weeks after the first dose to assess response to treatment; and
9 Either:
  9.1 Patient has not previously received an anti-IL5 biological therapy for their severe eosinophilic asthma; or
  9.2 Both:
    9.2.1 Patient was refractory or intolerant to previous anti-IL5 biological therapy; and
    9.2.2 Patient was not eligible to continue treatment with previous anti-IL5 biological therapy and discontinued within 12 months of commencing treatment.

Continuation – Severe eosinophilic asthma

Respiratory physician or clinical immunologist

Re-assessment required after 2 years

Both:

1 An increase in the Asthma Control Test (ACT) score of at least 5 from baseline; and
2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1 Exacerbations have been reduced from baseline by 50% as a result of treatment with mepolizumab; or
2.2 Reduction in continuous oral corticosteroid use by 50% or by 10 mg/day while maintaining or improving asthma control.

Initiation – eosinophilic granulomatosis with polyangiitis
Re-assessment required after 12 months
All of the following:

1 The patient has eosinophilic granulomatosis with polyangiitis; and
2 The patient has trialled and not received adequate benefit from at least one of the following for at least three months (unless contraindicated to all): azathioprine, cyclophosphamide, leflunomide, methotrexate, mycophenolate, or rituximab; and
3 Either:
3.1 The patient has trialled prednisone for a minimum of three months and is unable to maintain disease control at doses below 7.5 mg per day; or
3.2 Corticosteroids are contraindicated.

Continuation – eosinophilic granulomatosis with polyangiitis
Re-assessment required after 12 months
Patient has no evidence of clinical disease progression.

OBINUTUZUMAB – **Restricted** see terms below

⬇	Inj 25 mg per ml, 40 ml vial	5,910.00	1	Gazyva

➥ **Restricted** (RS1919)
Initiation
Haematologist
Limited to 6 months treatment
All of the following:

1 The patient has progressive Binet stage A, B or C CD20+ chronic lymphocytic leukaemia requiring treatment; and
2 The patient is obinutuzumab treatment naive; and
3 The patient is not eligible for full dose FCR due to comorbidities with a score > 6 on the Cumulative Illness Rating Scale (CIRS) or reduced renal function (creatinine clearance < 70mL/min); and
4 Patient has adequate neutrophil and platelet counts* unless the cytopenias are a consequence of marrow infiltration by CLL; and
5 Patient has good performance status; and
6 Obinutuzumab to be administered at a maximum cumulative dose of 8,000 mg and in combination with chlorambucil for a maximum of 6 cycles.

Notes: Chronic lymphocytic leukaemia includes small lymphocytic lymphoma. Comorbidity refers only to illness/impairment other than CLL induced illness/impairment in the patient. 'Good performance status' means ECOG score of 0-1, however, in patients temporarily debilitated by their CLL disease symptoms a higher ECOG (2 or 3) is acceptable where treatment with obinutuzumab is expected to improve symptoms and improve ECOG score to < 2.
* greater than or equal to 1.5×10^9/L and platelets greater than or equal to 75×10^9/L

Initiation – follicular / marginal zone lymphoma
Re-assessment required after 9 months
All of the following:

1 Either:
1.1 Patient has follicular lymphoma; or
1.2 Patient has marginal zone lymphoma; and
2 Patient is refractory to or has relapsed within 12 months of a rituximab containing combined chemo-immunotherapy regimen*; and
3 Patient has an ECOG performance status of 0-2; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 Patient has been previously treated with no more than four chemotherapy regimens; and
5 Obinutuzumab to be administered at a maximum dose of 1000 mg for a maximum of 6 cycles in combination with chemotherapy*.

Note: * includes unapproved indications

Continuation – follicular / marginal zone lymphoma

Re-assessment required after 24 months

All of the following:

1 Patient has no evidence of disease progression following obinutuzumab induction therapy; and
2 Obinutuzumab to be administered at a maximum of 1000 mg every 2 months for a maximum of 2 years; and
3 Obinutuzumab to be discontinued at disease progression.

OMALIZUMAB – **Restricted** see terms below

⬇	Inj 150 mg prefilled syringe	450.00	1	Xolair
⬇	Inj 150 mg vial	450.00	1	Xolair

➥ **Restricted** (RS1652)

Initiation – severe asthma

Clinical immunologist or respiratory specialist

Re-assessment required after 6 months

All of the following:

1 Patient must be aged 6 years or older ; and
2 Patient has a diagnosis of severe asthma; and
3 Past or current evidence of atopy, documented by skin prick testing or RAST; and
4 Total serum human immunoglobulin E (IgE) between 76 IU/mL and 1300 IU/ml at baseline; and
5 Proven adherence with optimal inhaled therapy including high dose inhaled corticosteroid (budesonide 1,600 mcg per day or fluticasone propionate 1,000 mcg per day or equivalent), plus long-acting beta-2 agonist therapy (at least salmeterol 50 mcg bd or eformoterol 12 mcg bd) for at least 12 months, unless contraindicated or not tolerated; and
6 Either:
  6.1 Patient has received courses of systemic corticosteroids equivalent to at least 28 days treatment in the past 12 months, unless contraindicated or not tolerated; or
  6.2 Patient has had at least 4 exacerbations needing systemic corticosteroids in the previous 12 months, where an exacerbation is defined as either documented use of oral corticosteroids for at least 3 days or parenteral steroids; and
7 Patient has an Asthma Control Test (ACT) score of 10 or less; and
8 Baseline measurements of the patient's asthma control using the ACT and oral corticosteroid dose must be made at the time of application, and again at around 26 weeks after the first dose to assess response to treatment.

Continuation – severe asthma

Respiratory specialist

Re-assessment required after 6 months

Both:

1 An increase in the Asthma Control Test (ACT) score of at least 5 from baseline; and
2 A reduction in the maintenance oral corticosteroid dose or number of exacerbations of at least 50% from baseline.

Initiation – severe chronic spontaneous urticaria

Clinical immunologist or dermatologist

Re-assessment required after 6 months

All of the following:

1 Patient must be aged 12 years or older; and
2 Either:
  2.1 Both:

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1.1 Patient is symptomatic with Urticaria Activity Score 7 (UAS7) of 20 or above; and
2.1.2 Patient has a Dermatology life quality index (DLQI) of 10 or greater; and

3 Any of the following:
3.1 Patient has been taking high dose antihistamines (e.g. 4 times standard dose) and ciclosporin (> 3 mg/kg day) for at least 6 weeks; or
3.2 Patient has been taking high dose antihistamines (e.g. 4 times standard dose) and at least 3 courses of systemic corticosteroids (> 20 mg prednisone per day for at least 5 days) in the previous 6 months; or
3.3 Patient has developed significant adverse effects whilst on corticosteroids or ciclosporin; and

4 Either:
4.1 Treatment to be stopped if inadequate response* following 4 doses; or
4.2 Complete response* to 6 doses of omalizumab.

Continuation – severe chronic spontaneous urticaria
Clinical immunologist or dermatologist
Re-assessment required after 6 months
Either:
1 Patient has previously had a complete response* to 6 doses of omalizumab; or
2 Both:
2.1 Patient has previously had a complete response* to 6 doses of omalizumab; and
2.2 Patient has relapsed after cessation of omalizumab therapy.

Note: *Inadequate response defined as less than 50% reduction in baseline UAS7 and DLQI score, or an increase in Urticaria Control Test (UCT) score of less than 4 from baseline. Patient is to be reassessed for response after 4 doses of omalizumab. Complete response is defined as UAS7 less than or equal to 6 and DLQI less than or equal to 5; or UCT of 16. Relapse of chronic urticaria on stopping prednisone/ciclosporin does not justify the funding of omalizumab.

PALIVIZUMAB – **Restricted** see terms below

⬇ Inj 100 mg per ml, 1 ml vial	1,700.00	1	Synagis

➥ **Restricted** (RS2081)
Initiation
Re-assessment required after 6 months
Both:
1 Palivizumab to be administered during the annual RSV season; and
2 Either:
2.1 Both:
2.1.1 Infant was born in the last 12 months; and
2.1.2 Infant was born at less than 32 weeks zero days' gestation; or
2.2 Both:
2.2.1 Child was born in the last 24 months; and
2.2.2 Any of the following:
2.2.2.1 Child has severe lung, airway, neurological or neuromuscular disease that requires ongoing ventilatory/respiratory support (see Note A) in the community; or
2.2.2.2 Both:
2.2.2.2.1 Child has haemodynamically significant heart disease; and
2.2.2.2.2 Any of the following:
2.2.2.2.2.1 Child has unoperated simple congenital heart disease with significant left to right shunt (see Note B); or
2.2.2.2.2.2 Child has unoperated or surgically palliated complex congenital heart disease; or
2.2.2.2.2.3 Child has severe pulmonary hypertension (see Note C); or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.2.2.2.4 Child has moderate or severe left ventricular (LV) failure (see Note D); or

2.2.2.3 Child has severe combined immune deficiency, confirmed by an immunologist, but has not received a stem cell transplant; or

2.2.2.4 Child has inborn errors of immunity (see Note E) that increase susceptibility to life-threatening viral respiratory infections, confirmed by an immunologist.

Continuation

Re-assessment required after 6 months

All of the following:

1 Palivizumab to be administered during the annual RSV season; and

2 Child was born in the last 24 months; and

3 Any of the following:

3.1 Child has severe lung, airway, neurological or neuromuscular disease that requires ongoing ventilatory/respiratory support (see Note A) in the community; or

3.2 Both:

3.2.1 Child has haemodynamically significant heart disease; and

3.2.2 Any of the following:

3.2.2.1 Child has unoperated simple congenital heart disease with significant left to right shunt (see Note B); or

3.2.2.2 Child has unoperated or surgically palliated complex congenital heart disease; or

3.2.2.3 Child has severe pulmonary hypertension (see Note C); or

3.2.2.4 Child has moderate or severe left ventricular (LV) failure (see Note D); or

3.3 Child has severe combined immune deficiency, confirmed by an immunologist, but has not received a stem cell transplant; or

3.4 Child has inborn errors of immunity (see Note E) that increase susceptibility to life-threatening viral respiratory infections, confirmed by an immunologist.

Notes:

a) Ventilatory/respiratory support includes those on home oxygen, CPAP/VPAP and those with tracheostomies in situ managed at home

b) Child requires/will require heart failure medication, and/or child has significant pulmonary hypertension, and/or infant will require surgical palliation/definitive repair within the next 3 months

c) Mean pulmonary artery pressure more than 25 mmHg

d) LV Ejection Fraction less than 40%

e) Inborn errors of immunity include, but are not limited to, IFNAR deficiencies

PERTUZUMAB – **Restricted** see terms below

⬇	Inj 30 mg per ml, 14 ml vial	3,927.00	1	Perjeta

➥ **Restricted** (RS1995)

Initiation

Re-assessment required after 12 months

All of the following:

1 The patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology); and

2 Either:

2.1 Patient is chemotherapy treatment naive; or

2.2 Patient has not received prior treatment for their metastatic disease and has had a treatment free interval of at least 12 months between prior (neo)adjuvant chemotherapy treatment and diagnosis of metastatic breast cancer; and

3 The patient has good performance status (ECOG grade 0-1); and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 Pertuzumab to be administered in combination with trastuzumab; and
5 Pertuzumab maximum first dose of 840 mg, followed by maximum of 420 mg every 3 weeks; and
6 Pertuzumab to be discontinued at disease progression.

Continuation
Re-assessment required after 12 months
Either:
1 Both:
1.1 The patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology); and
1.2 The cancer has not progressed at any time point during the previous 12 months whilst on pertuzumab and trastuzumab; or
2 All of the following:
2.1 Patient has previously discontinued treatment with pertuzumab and trastuzumab for reasons other than severe toxicity or disease progression; and
2.2 Patient has signs of disease progression; and
2.3 Disease has not progressed during previous treatment with pertuzumab and trastuzumab.

Initiation – Wet Age Related Macular Degeneration
Ophthalmologist or nurse practitioner
Re-assessment required after 3 months
Either:
1 All of the following:
1.1 Any of the following:
1.1.1 Wet age-related macular degeneration (wet AMD); or
1.1.2 Polypoidal choroidal vasculopathy; or
1.1.3 Choroidal neovascular membrane from causes other than wet AMD; and
1.2 Either:
1.2.1 The patient has developed severe endophthalmitis or severe posterior uveitis following treatment with bevacizumab; or
1.2.2 There is worsening of vision or failure of retina to dry despite three intraocular injections of bevacizumab four weeks apart; and
1.3 There is no structural damage to the central fovea of the treated eye; and
1.4 Patient has not previously been treated with aflibercept for longer than 3 months; or
2 Patient has current approval to use aflibercept for treatment of wAMD and was found to be intolerant to aflibercept within 3 months.

Continuation – Wet Age Related Macular Degeneration
Ophthalmologist or nurse practitioner
Re-assessment required after 12 months
All of the following:
1 Documented benefit must be demonstrated to continue; and
2 Patient's vision is 6/36 or better on the Snellen visual acuity score; and
3 There is no structural damage to the central fovea of the treated eye.

➥ **Restricted** (RS1785)

Initiation – rheumatoid arthritis - prior TNF inhibitor use

Rheumatologist

Limited to 4 months treatment

All of the following:

1 Both:
- 1.1 The patient has had an initial community Special Authority approval for at least one of etanercept and/or adalimumab for rheumatoid arthritis; and
- 1.2 Either:
  - 1.2.1 The patient has experienced intolerable side effects from a reasonable trial of adalimumab and/or etanercept; or
  - 1.2.2 Following at least a four month trial of adalimumab and/or etanercept, the patient did not meet the renewal criteria for adalimumab and/or etanercept for rheumatoid arthritis; and

2 Either:
- 2.1 Rituximab to be used as an adjunct to methotrexate or leflunomide therapy; or
- 2.2 Patient is contraindicated to both methotrexate and leflunomide, requiring rituximab monotherapy to be used; and

3 Maximum of two 1,000 mg infusions of rituximab given two weeks apart.

Initiation – rheumatoid arthritis - TNF inhibitors contraindicated

Rheumatologist

Limited to 4 months treatment

All of the following:

1 Treatment with a Tumour Necrosis Factor alpha inhibitor is contraindicated; and

2 Patient has had severe and active erosive rheumatoid arthritis (either confirmed by radiology imaging, or the patient is cyclic citrullinated peptide (CCP) antibody positive) for six months duration or longer; and

3 Patient has tried and not responded to at least three months of oral or parenteral methotrexate at a dose of at least 20 mg weekly or a maximum tolerated dose; and

4 Patient has tried and not responded to at least three months of oral or parenteral methotrexate in combination with sulfasalazine and hydroxychloroquine sulphate (at maximum tolerated doses); and

5 Any of the following:
- 5.1 Patient has tried and not responded to at least three months of oral or parenteral methotrexate in combination with the maximum tolerated dose of cyclosporin; or
- 5.2 Patient has tried and not responded to at least three months of oral or parenteral methotrexate in combination with intramuscular gold; or
- 5.3 Patient has tried and not responded to at least three months of therapy at the maximum tolerated dose of leflunomide alone or in combination with oral or parenteral methotrexate; and

6 Either:
- 6.1 Patient has persistent symptoms of poorly controlled and active disease in at least 20 swollen, tender joints; or
- 6.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

7 Either:
- 7.1 Patient has a C-reactive protein level greater than 15 mg/L measured no more than one month prior to the date of this application; or
- 7.2 C-reactive protein levels not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months; and

8 Either:
- 8.1 Rituximab to be used as an adjunct to methotrexate or leflunomide therapy; or
- 8.2 Patient is contraindicated to both methotrexate and leflunomide, requiring rituximab monotherapy to be used; and

9 Maximum of two 1,000 mg infusions of rituximab given two weeks apart.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Continuation – rheumatoid arthritis - re-treatment in 'partial responders' to rituximab

Rheumatologist

Re-assessment required after 4 months

All of the following:

1 Any of the following:
  - 1.1 At 4 months following the initial course of rituximab infusions the patient had between a 30% and 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
  - 1.2 At 4 months following the second course of rituximab infusions the patient had at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
  - 1.3 At 4 months following the third and subsequent courses of rituximab infusions, the patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; and
2 Rituximab re-treatment not to be given within 6 months of the previous course of treatment; and
3 Either:
  - 3.1 Rituximab to be used as an adjunct to methotrexate or leflunomide therapy; or
  - 3.2 Patient is contraindicated to both methotrexate and leflunomide, requiring rituximab monotherapy to be used; and
4 Maximum of two 1,000 mg infusions of rituximab given two weeks apart.

Continuation – rheumatoid arthritis - re-treatment in 'responders' to rituximab

Rheumatologist

Re-assessment required after 4 months

All of the following:

1 Either:
  - 1.1 At 4 months following the initial course of rituximab infusions the patient had at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
  - 1.2 At 4 months following the second and subsequent courses of rituximab infusions, the patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; and
2 Rituximab re-treatment not to be given within 6 months of the previous course of treatment; and
3 Either:
  - 3.1 Rituximab to be used as an adjunct to methotrexate or leflunomide therapy; or
  - 3.2 Patient is contraindicated to both methotrexate and leflunomide, requiring rituximab monotherapy to be used; and
4 Maximum of two 1,000 mg infusions of rituximab given two weeks apart.

Initiation – haemophilia with inhibitors

Haematologist

Any of the following:

1 Patient has mild congenital haemophilia complicated by inhibitors; or
2 Patient has severe congenital haemophilia complicated by inhibitors and has failed immune tolerance therapy; or
3 Patient has acquired haemophilia.

Continuation – haemophilia with inhibitors

Haematologist

All of the following:

1 Patient was previously treated with rituximab for haemophilia with inhibitors; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 An initial response lasting at least 12 months was demonstrated; and
3 Patient now requires repeat treatment.

Initiation – post-transplant

Both:

1 The patient has B-cell post-transplant lymphoproliferative disorder*; and
2 To be used for a maximum of 8 treatment cycles.

Note: Indications marked with * are unapproved indications.

Continuation – post-transplant

All of the following:

1 The patient has had a rituximab treatment-free interval of 12 months or more; and
2 The patient has B-cell post-transplant lymphoproliferative disorder*; and
3 To be used for no more than 6 treatment cycles.

Note: Indications marked with * are unapproved indications.

Initiation – indolent, low-grade lymphomas or hairy cell leukaemia*

Re-assessment required after 9 months

Either:

1 Both:
  1.1 The patient has indolent low grade NHL or hairy cell leukaemia* with relapsed disease following prior chemotherapy; and
  1.2 To be used for a maximum of 6 treatment cycles; or
2 Both:
  2.1 The patient has indolent, low grade lymphoma or hairy cell leukaemia* requiring first-line systemic chemotherapy; and
  2.2 To be used for a maximum of 6 treatment cycles.

Note: 'Indolent, low-grade lymphomas' includes follicular, mantle, marginal zone and lymphoplasmacytic/Waldenstrom macroglobulinaemia. *Unapproved indication. 'Hairy cell leukaemia' also includes hairy cell leukaemia variant.

Continuation – indolent, low-grade lymphomas or hairy cell leukaemia*

Re-assessment required after 12 months

All of the following:

1 The patient has had a rituximab treatment-free interval of 12 months or more; and
2 The patient has indolent, low-grade NHL or hairy cell leukaemia* with relapsed disease following prior chemotherapy; and
3 To be used for no more than 6 treatment cycles.

Note: 'Indolent, low-grade lymphomas' includes follicular, mantle, marginal zone and lymphoplasmacytic/Waldenstrom macroglobulinaemia. *Unapproved indication. 'Hairy cell leukaemia' also includes hairy cell leukaemia variant.

Initiation – aggressive CD20 positive NHL

Either:

1 All of the following:
  1.1 The patient has treatment naive aggressive CD20 positive NHL; and
  1.2 To be used with a multi-agent chemotherapy regimen given with curative intent; and
  1.3 To be used for a maximum of 8 treatment cycles; or
2 Both:
  2.1 The patient has aggressive CD20 positive NHL with relapsed disease following prior chemotherapy; and
  2.2 To be used for a maximum of 6 treatment cycles.

Note: 'Aggressive CD20 positive NHL' includes large B-cell lymphoma and Burkitt's lymphoma/leukaemia.

Continuation – aggressive CD20 positive NHL

All of the following:

1 The patient has had a rituximab treatment-free interval of 12 months or more; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 The patient has relapsed refractory/aggressive CD20 positive NHL; and
3 To be used with a multi-agent chemotherapy regimen given with curative intent; and
4 To be used for a maximum of 4 treatment cycles.

Note: 'Aggressive CD20 positive NHL' includes large B-cell lymphoma and Burkitt's lymphoma/leukaemia.

Initiation – Chronic lymphocytic leukaemia

Re-assessment required after 12 months

All of the following:

1 The patient has progressive Binet stage A, B or C chronic lymphocytic leukaemia (CLL) requiring treatment; and
2 Any of the following:
  2.1 The patient is rituximab treatment naive; or
  2.2 Either:
    2.2.1 The patient is chemotherapy treatment naive; or
    2.2.2 Both:
      2.2.2.1 The patient's disease has relapsed following no more than three prior lines of chemotherapy treatment; and
      2.2.2.2 The patient has had a treatment-free interval of 12 months or more if previously treated with fludarabine and cyclophosphamide chemotherapy; or
  2.3 The patient's disease has relapsed and rituximab treatment is to be used in combination with funded venetoclax; and
3 The patient has good performance status; and
4 Either:
  4.1 The patient does not have chromosome 17p deletion CLL; or
  4.2 Rituximab treatment is to be used in combination with funded venetoclax for relapsed/refractory chronic lymphocytic leukaemia; and
5 Rituximab to be administered in combination with fludarabine and cyclophosphamide, bendamustine or venetoclax for a maximum of 6 treatment cycles; and
6 It is planned that the patient receives full dose fludarabine and cyclophosphamide (orally or dose equivalent intravenous administration), bendamustine or venetoclax.

Note: 'Chronic lymphocytic leukaemia (CLL)' includes small lymphocytic lymphoma. A line of chemotherapy treatment is considered to comprise a known standard therapeutic chemotherapy regimen and supportive treatments. 'Good performance status' means ECOG score of 0-1, however, in patients temporarily debilitated by their CLL disease symptoms a higher ECOG (2 or 3) is acceptable where treatment with rituximab is expected to improve symptoms and improve ECOG score to < 2.

Continuation – Chronic lymphocytic leukaemia

Re-assessment required after 12 months

Both:

1 Either:
  1.1 The patient's disease has relapsed and rituximab treatment is to be used in combination with funded venetoclax; or
  1.2 All of the following:
    1.2.1 The patient's disease has relapsed following no more than one prior line of treatment with rituximab for CLL; and
    1.2.2 The patient has had an interval of 36 months or more since commencement of initial rituximab treatment; and
    1.2.3 The patient does not have chromosome 17p deletion CLL; and
    1.2.4 It is planned that the patient receives full dose fludarabine and cyclophosphamide (orally or dose equivalent intravenous administration) or bendamustin; and
2 Rituximab to be administered in combination with fludarabine and cyclophosphamide, bendamustine or venetoclax for a maximum of 6 treatment cycles.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Note: 'Chronic lymphocytic leukaemia (CLL)' includes small lymphocytic lymphoma. A line of chemotherapy treatment is considered to comprise a known standard therapeutic chemotherapy regimen and supportive treatments.

Initiation – severe cold haemagglutinin disease (CHAD)

Haematologist

Re-assessment required after 8 weeks

All of the following:

1 Patient has cold haemagglutinin disease*; and
2 Patient has severe disease which is characterized by symptomatic anaemia, transfusion dependence or disabling circulatory symptoms; and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with * are unapproved indications.

Continuation – severe cold haemagglutinin disease (CHAD)

Haematologist

Re-assessment required after 8 weeks

Either:

1 Previous treatment with lower doses of rituximab (100 mg weekly for 4 weeks) have proven ineffective and treatment with higher doses (375 mg/m^2 weekly for 4 weeks) is now planned; or
2 All of the following:
    2.1 Patient was previously treated with rituximab for severe cold haemagglutinin disease*; and
    2.2 An initial response lasting at least 12 months was demonstrated; and
    2.3 Patient now requires repeat treatment.

Note: Indications marked with * are unapproved indications.

Initiation – warm autoimmune haemolytic anaemia (warm AIHA)

Haematologist

Re-assessment required after 8 weeks

All of the following:

1 Patient has warm autoimmune haemolytic anaemia*; and
2 One of the following treatments has been ineffective: steroids (including if patient requires ongoing steroids at doses equivalent to > 5 mg prednisone daily), cytotoxic agents (e.g. cyclophosphamide monotherapy or in combination), intravenous immunoglobulin; and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with * are unapproved indications.

Continuation – warm autoimmune haemolytic anaemia (warm AIHA)

Haematologist

Re-assessment required after 8 weeks

Either:

1 Previous treatment with lower doses of rituximab (100 mg weekly for 4 weeks) have proven ineffective and treatment with higher doses (375 mg/m^2 weekly for 4 weeks) is now planned; or
2 All of the following:
    2.1 Patient was previously treated with rituximab for warm autoimmune haemolytic anaemia*; and
    2.2 An initial response lasting at least 12 months was demonstrated; and
    2.3 Patient now requires repeat treatment.

Note: Indications marked with * are unapproved indications.

Initiation – immune thrombocytopenic purpura (ITP)

Haematologist

Re-assessment required after 8 weeks

All of the following:

1 Either:
  1.1 Patient has immune thrombocytopenic purpura* with a platelet count of less than or equal to 20,000 platelets per microlitre; or
  1.2 Patient has immune thrombocytopenic purpura* with a platelet count of 20,000 to 30,000 platelets per microlitre and significant mucocutaneous bleeding; and
2 Any of the following:
  2.1 Treatment with steroids and splenectomy have been ineffective; or
  2.2 Treatment with steroids has been ineffective and splenectomy is an absolute contraindication; or
  2.3 Other treatments including steroids have been ineffective and patient is being prepared for elective surgery (e.g. splenectomy); and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with * are unapproved indications.

Continuation – immune thrombocytopenic purpura (ITP)

Haematologist

Re-assessment required after 8 weeks

Either:

1 Previous treatment with lower doses of rituximab (100 mg weekly for 4 weeks) have proven ineffective and treatment with higher doses (375 mg/m^2 weekly for 4 weeks) is now planned; or
2 All of the following:
  2.1 Patient was previously treated with rituximab for immune thrombocytopenic purpura*; and
  2.2 An initial response lasting at least 12 months was demonstrated; and
  2.3 Patient now requires repeat treatment.

Note: Indications marked with * are unapproved indications.

Initiation – thrombotic thrombocytopenic purpura (TTP)

Haematologist

Re-assessment required after 8 weeks

Both:

1 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of 4 weeks; and
2 Either:
  2.1 Patient has thrombotic thrombocytopenic purpura* and has experienced progression of clinical symptoms or persistent thrombocytopenia despite plasma exchange; or
  2.2 Patient has acute idiopathic thrombotic thrombocytopenic purpura* with neurological or cardiovascular pathology.

Note: Indications marked with * are unapproved indications.

Continuation – thrombotic thrombocytopenic purpura (TTP)

Haematologist

Re-assessment required after 8 weeks

All of the following:

1 Patient was previously treated with rituximab for thrombotic thrombocytopenic purpura*; and
2 An initial response lasting at least 12 months was demonstrated; and
3 Patient now requires repeat treatment; and
4 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

4 weeks.

Note: Indications marked with * are unapproved indications.

Initiation – pure red cell aplasia (PRCA)

Haematologist

Re-assessment required after 6 weeks

Patient has autoimmune pure red cell aplasia* associated with a demonstrable B-cell lymphoproliferative disorder.

Note: Indications marked with * are unapproved indications.

Continuation – pure red cell aplasia (PRCA)

Haematologist

Re-assessment required after 6 weeks

Patient was previously treated with rituximab for pure red cell aplasia* associated with a demonstrable B-cell lymphoproliferative disorder and demonstrated an initial response lasting at least 12 months.

Note: Indications marked with * are unapproved indications.

Initiation – ANCA associated vasculitis

Re-assessment required after 8 weeks

All of the following:

1 Patient has been diagnosed with ANCA associated vasculitis*; and
2 The total rituximab dose would not exceed the equivalent of 375 mg/m^2 of body-surface area per week for a total of 4 weeks; and
3 Any of the following:
    3.1 Induction therapy with daily oral or pulse intravenous cyclophosphamide has failed to achieve significant improvement of disease after at least 3 months; or
    3.2 Patient has previously had a cumulative dose of cyclophosphamide > 15 g or a further repeat 3 month induction course of cyclophosphamide would result in a cumulative dose > 15 g; or
    3.3 Cyclophosphamide and methotrexate are contraindicated; or
    3.4 Patient is a female of child-bearing potential; or
    3.5 Patient has a previous history of haemorrhagic cystitis, urological malignancy or haematological malignancy.

Note: Indications marked with * are unapproved indications.

Continuation – ANCA associated vasculitis

Re-assessment required after 8 weeks

All of the following:

1 Patient has been diagnosed with ANCA associated vasculitis*; and
2 Patient has previously responded to treatment with rituximab but is now experiencing an acute flare of vasculitis; and
3 The total rituximab dose would not exceed the equivalent of 375 mg/m^2 of body-surface area per week for a total of 4 weeks.

Note: Indications marked with * are unapproved indications.

Initiation – treatment refractory systemic lupus erythematosus (SLE)

Rheumatologist or nephrologist

All of the following:

1 The patient has severe, immediately life- or organ-threatening SLE*; and
2 The disease has proved refractory to treatment with steroids at a dose of at least 1 mg/kg; and
3 The disease has relapsed following prior treatment for at least 6 months with maximal tolerated doses of azathioprine, mycophenolate mofetil and high dose cyclophosphamide, or cyclophosphamide is contraindicated; and
4 Maximum of four 1000 mg infusions of rituximab.

Note: Indications marked with * are unapproved indications.

Continuation – treatment refractory systemic lupus erythematosus (SLE)

Rheumatologist or nephrologist

All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient's SLE* achieved at least a partial response to the previous round of prior rituximab treatment; and
2 The disease has subsequently relapsed; and
3 Maximum of two 1000 mg infusions of rituximab.

Note: Indications marked with * are unapproved indications.

Initiation – Antibody-mediated organ transplant rejection

Patient has been diagnosed with antibody-mediated organ transplant rejection*.

Note: Indications marked with * are unapproved indications.

Initiation – ABO-incompatible organ transplant

Patient is to undergo an ABO-incompatible solid organ transplant*.

Note: Indications marked with * are unapproved indications.

Initiation – Steroid dependent nephrotic syndrome (SDNS) or frequently relapsing nephrotic syndrome (FRNS)

Nephrologist

Re-assessment required after 8 weeks

All of the following:

1 Patient is a child with SDNS* or FRNS*; and
2 Treatment with steroids for at least a period of 3 months has been ineffective or associated with evidence of steroid toxicity; and
3 Treatment with ciclosporin for at least a period of 3 months has been ineffective and/or discontinued due to unacceptable side effects; and
4 Treatment with mycophenolate for at least a period of 3 months with no reduction in disease relapses; and
5 The total rituximab dose used would not exceed the equivalent of 375 mg/m^2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with a * are unapproved indications.

Continuation – Steroid dependent nephrotic syndrome (SDNS) or frequently relapsing nephrotic syndrome (FRNS)

Nephrologist

Re-assessment required after 8 weeks

All of the following:

1 Patient who was previously treated with rituximab for nephrotic syndrome*; and
2 Treatment with rituximab was previously successful and has demonstrated sustained response for > 6 months, but the condition has relapsed and the patient now requires repeat treatment; and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m^2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with a * are unapproved indications.

Initiation – Steroid resistant nephrotic syndrome (SRNS)

Nephrologist

Re-assessment required after 8 weeks

All of the following:

1 Patient is a child with SRNS* where treatment with steroids and ciclosporin for at least 3 months have been ineffective; and
2 Treatment with tacrolimus for at least 3 months has been ineffective; and
3 Genetic causes of nephrotic syndrome have been excluded; and
4 The total rituximab dose used would not exceed the equivalent of 375 mg/m^2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with a * are unapproved indications.

Continuation – Steroid resistant nephrotic syndrome (SRNS)

Nephrologist

Re-assessment required after 8 weeks

All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient who was previously treated with rituximab for nephrotic syndrome*; and
2 Treatment with rituximab was previously successful and has demonstrated sustained response for greater than 6 months, but the condition has relapsed and the patient now requires repeat treatment; and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m^2 of body surface area per week for a total of 4 weeks.

Note: Indications marked with a * are unapproved indications.

Initiation – Neuromyelitis Optica Spectrum Disorder (NMOSD)

Re-assessment required after 6 months

Both:

1 One of the following dose regimens is to be used: 2 doses of 1,000 mg rituximab administered fortnightly, or 4 doses of 375 mg/m2 administered weekly for four weeks; and
2 Either:
  2.1 The patient has experienced a severe episode or attack of NMOSD (rapidly progressing symptoms and clinical investigations supportive of a severe attack of NMOSD); or
  2.2 All of the following:
    2.2.1 The patient has experienced a breakthrough attack of NMOSD; and
    2.2.2 The patient is receiving treatment with mycophenolate; and
    2.2.3 The patients is receiving treatment with corticosteroids.

Continuation – Neuromyelitis Optica Spectrum Disorder (NMOSD)

Re-assessment required after 2 years

All of the following:

1 One of the following dose regimens is to be used: 2 doses of 1,000 mg rituximab administered fortnightly, or 4 doses of 375 mg/m2 administered weekly for four weeks; and
2 The patients has responded to the most recent course of rituximab; and
3 The patient has not received rituximab in the previous 6 months.

Initiation – Severe Refractory Myasthenia Gravis

Neurologist

Re-assessment required after 2 years

Both:

1 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart; and
2 Either:
  2.1 Treatment with corticosteroids and at least one other immunosuppressant for at least a period of 12 months has been ineffective; or
  2.2 Both:
    2.2.1 Treatment with at least one other immunosuppressant for a period of at least 12 months; and
    2.2.2 Corticosteroids have been trialed for at least 12 months and have been discontinued due to unacceptable side effects.

Continuation – Severe Refractory Myasthenia Gravis

Neurologist

Re-assessment required after 2 years

All of the following:

1 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart; and
2 An initial response lasting at least 12 months was demonstrated; and
3 Either:
  3.1 The patient has relapsed despite treatment with corticosteroids and at least one other immunosuppressant for a

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

period of at least 12 months; or

3.2 Both:

3.2.1 The patient's myasthenia gravis has relapsed despite treatment with at least one immunosuppressant for a period of at least 12 months; and

3.2.2 Corticosteroids have been trialed for at least 12 months and have been discontinued due to unacceptable side effects.

Initiation – Severe antisynthetase syndrome

Re-assessment required after 12 months

All of the following:

1 Patient has confirmed antisynthetase syndrome; and

2 Patient has severe, immediately life or organ threatening disease, including interstitial lung disease; and

3 Either:

3.1 Treatment with at least 3 immunosuppressants (oral steroids, cyclophosphamide, methotrexate, mycophenolate, ciclosporin, azathioprine) has not be effective at controlling active disease; or

3.2 Rapid treatment is required due to life threatening complications; and

4 Maximum of four 1,000 mg infusions of rituximab.

Continuation – Severe antisynthetase syndrome

Re-assessment required after 12 months

All of the following:

1 Patient's disease has responded to the previous rituximab treatment with demonstrated improvement in inflammatory markers, muscle strength and pulmonary function; and

2 The patient has not received rituximab in the previous 6 months; and

3 Maximum of two cycles of 2 × 1,000 mg infusions of rituximab given two weeks apart.

Initiation – graft versus host disease

All of the following:

1 Patient has refractory graft versus host disease following transplant; and

2 Treatment with at least 3 immunosuppressants (oral steroids, ciclosporin, tacrolimus, mycophenolate, sirolimus) has not be effective at controlling active disease; and

3 The total rituximab dose used would not exceed the equivalent of 375 mg/m^2 of body surface area per week for a total of 4 weeks.

Initiation – severe chronic inflammatory demyelinating polyneuropathy

Neurologist

Re-assessment required after 6 months

All of the following:

1 Patient has severe chronic inflammatory demyelinating polyneuropathy (CIPD); and

2 Either:

2.1 Both:

2.1.1 Treatment with steroids and intravenous immunoglobulin and/or plasma exchange has not been effective at controlling active disease; and

2.1.2 At least one other immunosuppressant (cyclophosphamide, ciclosporin, tacrolimus, mycophenolate) has not been effective at controlling active disease; or

2.2 Rapid treatment is required due to life threatening complications; and

3 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – severe chronic inflammatory demyelinating polyneuropathy

Neurologist or medical practitioner on the recommendation of a Neurologist

Re-assessment required after 6 months

All of the following:

1 Patient's disease has responded to the previous rituximab treatment with demonstrated improvement in neurological function compared to baseline; and
2 The patient has not received rituximab in the previous 6 months; and
3 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart.

Initiation – anti-NMDA receptor autoimmune encephalitis

Neurologist

Re-assessment required after 6 months

All of the following:

1 Patient has severe anti-NMDA receptor autoimmune encephalitis; and
2 Either:
  2.1 Both:
    2.1.1 Treatment with steroids and intravenous immunoglobulin and/or plasma exchange has not been effective at controlling active disease; and
    2.1.2 At least one other immunosuppressant (cyclophosphamide, ciclosporin, tacrolimus, mycophenolate) has not been effective at controlling active disease; or
  2.2 Rapid treatment is required due to life threatening complications; and
3 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart.

Continuation – anti-NMDA receptor autoimmune encephalitis

Neurologist

Re-assessment required after 6 months

All of the following:

1 Patient's disease has responded to the previous rituximab treatment with demonstrated improvement in neurological function; and
2 The patient has not received rituximab in the previous 6 months; and
3 The patient has experienced a relapse and now requires further treatment; and
4 One of the following dose regimens is to be used: 375 mg/m2 of body surface area per week for a total of four weeks, or 500 mg once weekly for four weeks, or two 1,000 mg doses given two weeks apart.

Initiation – CD20+ low grade or follicular B-cell NHL

Re-assessment required after 9 months

Either:

1 Both:
  1.1 The patient has CD20+ low grade or follicular B-cell NHL with relapsed disease following prior chemotherapy; and
  1.2 To be used for a maximum of 6 treatment cycles; or
2 Both:
  2.1 The patient has CD20+ low grade or follicular B-cell NHL requiring first-line systemic chemotherapy; and
  2.2 To be used for a maximum of 6 treatment cycles.

Continuation – CD20+ low grade or follicular B-cell NHL

Re-assessment required after 24 months

Both:

1 Rituximab is to be used for maintenance in CD20+ low grade or follicular B-cell NHL following induction with first-line systemic chemotherapy; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 Patient is intended to receive rituximab maintenance therapy for 2 years at a dose of 375 mg/m2 every 8 weeks (maximum of 12 cycles).

Initiation – Membranous nephropathy

Re-assessment required after 6 weeks

All of the following:

1 Either:
  1.1 Patient has biopsy-proven primary/idiopathic membranous nephropathy*; or
  1.2 Patient has PLA2 antibodies with no evidence of secondary cause, and an eGFR of > 60ml/min/1.73m2; and
2 Patient remains at high risk of progression to end-stage kidney disease despite more than 3 months of treatment with conservative measures (see Note); and
3 The total rituximab dose would not exceed the equivalent of 375mg/m2 of body surface area per week for a total of 4 weeks.

Continuation – Membranous nephropathy

Re-assessment required after 6 weeks

All of the following:

1 Patient was previously treated with rituximab for membranous nephropathy*; and
2 Either:
  2.1 Treatment with rituximab was previously successful, but the condition has relapsed, and the patient now requires repeat treatment; or
  2.2 Patient achieved partial response to treatment and requires repeat treatment (see Note); and
3 The total rituximab dose used would not exceed the equivalent of 375 mg/m2 of body surface area per week for a total of 4 weeks.

Notes:

a) Indications marked with * are unapproved indications.
b) High risk of progression to end-stage kidney disease defined as > 5g/day proteinuria.
c) Conservative measures include renin-angiotensin system blockade, blood-pressure management, dietary sodium and protein restriction, treatment of dyslipidaemia, and anticoagulation agents unless contraindicated or the patient has experienced intolerable side effects.
d) Partial response defined as a reduction of proteinuria of at least 50% from baseline, and between 0.3 grams and 3.5 grams per 24 hours.

Initiation – B-cell acute lymphoblastic leukaemia/lymphoma*

Limited to 2 years treatment

All of the following:

1 Patient has newly diagnosed B-cell acute lymphoblastic leukaemia/lymphoma*; and
2 Treatment must be in combination with an intensive chemotherapy protocol with curative intent; and
3 The total rituximab dose would not exceed the equivalent of 375 mg/m2 per dose for a maximum of 18 doses.

Note: Indications marked with * are unapproved indications.

Initiation – desensitisation prior to transplant

Limited to 6 weeks treatment

Both:

1 Patient requires desensitisation prior to mismatched allogenic stem cell transplant*; and
2 Patient would receive no more than two doses at 375 mg/m2 of body-surface area.

Note: Indications marked with * are unapproved indications.

Initiation – pemiphigus*

Dermatologist or relevant specialist

Re-assessment required after 6 months

Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 All of the following:
- 1.1 Patient has severe rapidly progressive pemphigus; and
- 1.2 Is used in combination with systemic corticosteroids (20 mg/day); and
- 1.3 Any of the following:
  - 1.3.1 Skin involvement is at least 5% body surface area; or
  - 1.3.2 Significant mucosal involvement (10 or more mucosal erosions) or diffuse gingivitis or confluent large erosions; or
  - 1.3.3 Involvement of two or more mucosal sites; or

2 Both:
- 2.1 Patient has pemphigus; and
- 2.2 Patient has not experienced adequate clinical benefit from systemic corticosteroids (20 mg/day) in combination with a steroid sparing agent, unless contraindicated.

Note: Indications marked with * are unapproved indications.

Continuation – pemiphigus*

Dermatologist or relevant specialist

Re-assessment required after 6 months

Both:
1 Patient has experienced adequate clinical benefit from rituximab treatment, with improvement in symptoms and healing of skin ulceration and reduction in corticosteroid requirement; and
2 Patient has not received rituximab in the previous 6 months.

Note: Indications marked with * are unapproved indications.

Initiation – immunoglobulin G4-related disease (IgG4-RD*)

Re-assessment required after 6 weeks

All of the following:
1 Patient has confirmed diagnosis of IgG4-RD*; and
2 Either:
- 2.1 Treatment with corticosteroids and/or disease modifying anti-rheumatic drugs for at least 3 months has been ineffective in lowering corticosteroid dose below 5 mg per day (prednisone equivalent) without relapse; or
- 2.2 Treatment with corticosteroids and/or disease modifying anti-rheumatic drugs is contraindicated or associated with evidence of toxicity or intolerance; and

3 Total rituximab dose used should not exceed a maximum of two 1000 mg infusions of rituximab given two weeks apart.

Note: Indications marked with * are unapproved indications.

Continuation – immunoglobulin G4-related disease (IgG4-RD*)

Re-assessment required after 12 months

All of the following:
1 Either:
- 1.1 Treatment with rituximab for IgG4-RD* was previously successful and patient's disease has demonstrated sustained response, but the condition has relapsed; or
- 1.2 Patient is receiving maintenance treatment for IgG4-RD*; and

2 Rituximab re-treatment not to be given within 6 months of previous course of treatment; and
3 Maximum of two 1000 mg infusions of rituximab given two weeks apart.

Note: Indications marked with * are unapproved indications.

SECUKINUMAB – **Restricted** see terms below

⬇ Inj 150 mg per ml, 1 ml prefilled syringe	799.50	1	Cosentyx
	1,599.00	2	Cosentyx

➥ **Restricted** (RS2119)

Initiation – severe chronic plaque psoriasis, second-line biologic

Dermatologist

Re-assessment required after 4 months

All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 The patient has had an initial Special Authority approval for adalimumab or etanercept, or has trialled infliximab in a Health NZ Hospital, for severe chronic plaque psoriasis; and
2 Either:
  2.1 The patient has experienced intolerable side effects from adalimumab, etanercept or infliximab; or
  2.2 The patient has received insufficient benefit from adalimumab, etanercept or infliximab; and
3 A Psoriasis Area and Severity Index (PASI) assessment or Dermatology Quality of Life Index (DLQI) assessment has been completed for at least the most recent prior treatment course, preferably while still on treatment but no longer than 1 month following cessation of each prior treatment course; and
4 The most recent PASI or DQLI assessment is no more than 1 month old at the time of application.

Continuation – severe chronic plaque psoriasis, second-line biologic
Dermatologist
Re-assessment required after 6 months
Both:

1 Either:
  1.1 Patient's PASI score has reduced by 75% or more (PASI 75) as compared to baseline PASI prior to commencing secukinumab; or
  1.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing secukinumab; and
2 Secukinumab to be administered at a maximum dose of 300 mg monthly.

Initiation – severe chronic plaque psoriasis, first-line biologic
Dermatologist
Re-assessment required after 4 months
All of the following:

1 Any of the following:
  1.1 Patient has "whole body" severe chronic plaque psoriasis with a Psoriasis Area and Severity Index (PASI) score of greater than 10, where lesions have been present for at least 6 months from the time of initial diagnosis; or
  1.2 Patient has severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot, where the plaque or plaques have been present for at least 6 months from the time of initial diagnosis; or
  1.3 Patient has severe chronic localised genital or flexural plaque psoriasis where the plaques or lesions have been present for at least 6 months from the time of initial diagnosis, and with a Dermatology Life Quality Index (DLQI) score greater than 10; and
2 Patient has tried, but had an inadequate response (see Note) to, or has experienced intolerable side effects from, at least three of the following (at maximum tolerated doses unless contraindicated): phototherapy, methotrexate, ciclosporin, or acitretin; and
3 A PASI assessment or Dermatology Quality of Life Index (DLQI) assessment has been completed for at least the most recent prior treatment course, preferably while still on treatment but no longer than 1 month following cessation of each prior treatment course; and
4 The most recent PASI or DQLI assessment is no more than 1 month old at the time of application.

Note: A treatment course is defined as a minimum of 12 weeks of treatment. "Inadequate response" is defined as: for whole body severe chronic plaque psoriasis, a PASI score of greater than 10, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment; for severe chronic plaque psoriasis of the face, hand, foot, genital or flexural areas, at least 2 of the 3 PASI symptom sub scores for erythema, thickness and scaling are rated as severe or very severe, and for the face, palm of a hand or sole of a foot the skin area affected is 30% or more of the face, palm of a hand or sole of a foot, as assessed preferably while still on treatment but no longer than 1 month following cessation of the most recent prior treatment.

Continuation – severe chronic plaque psoriasis, first-line biologic
Re-assessment required after 6 months
Both:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Either:
  1.1 Either:
    1.1.1 Patient's PASI score has reduced by 75% or more (PASI 75) as compared to baseline PASI prior to commencing secukinumab; or
    1.1.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing secukinumab; or
  1.2 Both:
    1.2.1 Patient had severe chronic localised genital or flexural plaque psoriasis at the start of treatment; and
    1.2.2 Either:
      1.2.2.1 The patient has experienced a reduction of 75% or more in the skin area affected, or sustained at this level, as compared to the pre-treatment baseline value; or
      1.2.2.2 Patient has a Dermatology Quality of Life Index (DLQI) improvement of 5 or more, as compared to baseline DLQI prior to commencing secukinumab; and
2 Secukinumab to be administered at a maximum dose of 300 mg monthly.

Initiation – ankylosing spondylitis, second-line biologic
Rheumatologist
Re-assessment required after 3 months
Both:
1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept for ankylosing spondylitis; and
2 Either:
  2.1 The patient has experienced intolerable side effects from a reasonable trial of adalimumab and/or etanercept; or
  2.2 Following 12 weeks of adalimumab and/or etanercept treatment, the patient did not meet the renewal criteria for adalimumab and/or etanercept for ankylosing spondylitis.

Continuation – ankylosing spondylitis, second-line biologic
Rheumatologist
Re-assessment required after 6 months
All of the following:
1 Following 12 weeks initial treatment of secukinumab treatment, BASDAI has improved by 4 or more points from pre-secukinumab baseline on a 10 point scale, or by 50%, whichever is less; and
2 Physician considers that the patient has benefitted from treatment and that continued treatment is appropriate; and
3 Secukinumab to be administered at doses no greater than 300 mg monthly.

Initiation – psoriatic arthritis
Rheumatologist
Re-assessment required after 6 months
Either:
1 Both:
  1.1 Patient has had an initial Special Authority approval for adalimumab, etanercept or infliximab for psoriatic arthritis; and
  1.2 Either:
    1.2.1 Patient has experienced intolerable side effects from adalimumab, etanercept or infliximab; or
    1.2.2 Patient has received insufficient benefit from adalimumab, etanercept or infliximab to meet the renewal criteria for adalimumab, etanercept or infliximab for psoriatic arthritis; or
2 All of the following:
  2.1 Patient has had severe active psoriatic arthritis for six months duration or longer; and
  2.2 Patient has tried and not responded to at least three months of oral or parenteral methotrexate at a dose of at least 20 mg weekly or a maximum tolerated dose; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.3 Patient has tried and not responded to at least three months of sulfasalazine at a dose of at least 2 g per day or leflunomide at a dose of up to 20 mg daily (or maximum tolerated doses); and

2.4 Either:

2.4.1 Patient has persistent symptoms of poorly controlled and active disease in at least 15 swollen, tender joints; or

2.4.2 Patient has persistent symptoms of poorly controlled and active disease in at least four joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

2.5 Any of the following:

2.5.1 Patient has a C-reactive protein level greater than 15 mg/L measured no more than one month prior to the date of this application; or

2.5.2 Patient has an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour; or

2.5.3 ESR and CRP not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Continuation – psoriatic arthritis

Rheumatologist

Re-assessment required after 6 months

Both:

1 Either:

1.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or

1.2 The patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to prior secukinumab treatment in the opinion of the treating physician; and

2 Secukinumab to be administered at doses no greater than 300 mg monthly.

SILTUXIMAB – **Restricted** see terms below

⬇	Inj 100 mg vial	770.57	1	Sylvant
⬇	Inj 400 mg vial	3,082.33	1	Sylvant

➥ **Restricted** (RS1525)

Initiation

Haematologist or rheumatologist

Re-assessment required after 6 months

All of the following:

1 Patient has severe HHV-8 negative idiopathic multicentric Castleman's Disease; and

2 Treatment with an adequate trial of corticosteroids has proven ineffective; and

3 Siltuximab is to be administered at doses no greater than 11 mg/kg every 3 weeks.

Continuation

Haematologist or rheumatologist

Re-assessment required after 12 months

The treatment remains appropriate and the patient has sustained improvement in inflammatory markers and functional status.

TOCILIZUMAB – **Restricted** see terms below

➥ **Restricted** (RS2125)

Initiation – cytokine release syndrome

Therapy limited to 3 doses

Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Both:
  1.1 The patient has developed grade 3 or 4 cytokine release syndrome associated with the administration of blinatumomab for the treatment of acute lymphoblastic leukaemia; and
  1.2 Tocilizumab is to be administered at doses no greater than 8 mg/kg IV for a maximum of 3 doses (if less than 30kg, maximum of 12 mg/kg); or
2 All of the following:
  2.1 The patient is enrolled in the Malaghan Institute of Medical Research ENABLE trial programme; and
  2.2 The patient has developed CRS or Immune Effector Cell-Associated Neurotoxicity Syndrome (ICANS) following CAR T-Cell therapy for the treatment of relapsed or refractory B-cell non-Hodgkin lymphoma; and
  2.3 Tocilizumab is to be administered according to the consensus guidelines for CRS or ICANS for CAR T-cell therapy at doses no greater than 8 mg/kg IV for a maximum of 3 doses.

Initiation – previous use
Any relevant practitioner
Limited to 6 months treatment
Both:
1 Patient was being treated with tocilizumab prior to 1 February 2019; and
2 Any of the following:
  2.1 rheumatoid arthritis; or
  2.2 systemic juvenile idiopathic arthritis; or
  2.3 adult-onset Still's disease; or
  2.4 polyarticular juvenile idiopathic arthritis; or
  2.5 idiopathic multicentric Castleman's disease.

Initiation – Rheumatoid Arthritis (patients previously treated with adalimumab or etanercept)
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Limited to 6 months treatment
All of the following:
1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept for rheumatoid arthritis; and
2 Either:
  2.1 The patient has experienced intolerable side effects from adalimumab and/or etanercept; or
  2.2 The patient has received insufficient benefit from at least a three-month trial of adalimumab and/or etanercept such that they do not meet the renewal criteria for rheumatoid arthritis; and
3 Either:
  3.1 The patient is seronegative for both anti-cyclic citrullinated peptide (CCP) antibodies and rheumatoid factor; or
  3.2 Both:
    3.2.1 The patient has been started on rituximab for rheumatoid arthritis in a Health NZ Hospital; and
    3.2.2 Either:
      3.2.2.1 The patient has experienced intolerable side effects from rituximab; or
      3.2.2.2 At four months following the initial course of rituximab the patient has received insufficient benefit such that they do not meet the renewal criteria for rheumatoid arthritis.

Initiation – Rheumatoid Arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
All of the following:
1 Patient has had severe and active erosive rheumatoid arthritis (either confirmed by radiology imaging, or the patient is cyclic citrullinated peptide (CCP) antibody positive) for six months duration or longer; and
2 Tocilizumab is to be used as monotherapy; and
3 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3.1 Treatment with methotrexate is contraindicated; or
3.2 Patient has tried and did not tolerate oral and/or parenteral methotrexate; and

4 Either:
4.1 Patient has tried and not responded to at least three months therapy at the maximum tolerated dose of ciclosporin alone or in combination with another agent; or
4.2 Patient has tried and not responded to at least three months therapy at the maximum tolerated dose of leflunomide alone or in combination with another agent; and

5 Either:
5.1 Patient has persistent symptoms of poorly controlled and active disease in at least 20 active, swollen, tender joints; or
5.2 Patient has persistent symptoms of poorly controlled and active disease in at least four active joints from the following: wrist, elbow, knee, ankle, and either shoulder or hip; and

6 Either:
6.1 Patient has a C-reactive protein level greater than 15 mg/L measured no more than one month prior to the date of this application; or
6.2 C-reactive protein levels not measured as patient is currently receiving prednisone therapy at a dose of greater than 5 mg per day and has done so for more than three months.

Initiation – systemic juvenile idiopathic arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
Both:
1 Patient diagnosed with systemic juvenile idiopathic arthritis; and
2 Patient has tried and not responded to a reasonable trial of all of the following, either alone or in combination: oral or parenteral methotrexate; non-steroidal anti-inflammatory drugs (NSAIDs); and systemic corticosteroids.

Initiation – adult-onset Still's disease
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
Either:
1 Both:
1.1 Either:
1.1.1 The patient has had an initial Special Authority approval for adalimumab and/or etanercept for adult-onset Still's disease (AOSD); or
1.1.2 The patient has been started on tocilizumab for AOSD in a Health NZ Hospital; and
1.2 Either:
1.2.1 The patient has experienced intolerable side effects from adalimumab and/or etanercept; or
1.2.2 The patient has received insufficient benefit from at least a three-month trial of adalimumab and/or etanercept such that they do not meet the renewal criteria for AOSD; or

2 All of the following:
2.1 Patient diagnosed with AOSD according to the Yamaguchi criteria (J Rheumatol 1992;19:424-430); and
2.2 Patient has tried and not responded to at least 6 months of glucocorticosteroids at a dose of at least 0.5 mg/kg, non-steroidal antiinflammatory drugs (NSAIDs) and methotrexate; and
2.3 Patient has persistent symptoms of disabling poorly controlled and active disease.

Initiation – polyarticular juvenile idiopathic arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 4 months
Either:
1 Both:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has had an initial Special Authority approval for both etanercept and adalimumab for polyarticular course juvenile idiopathic arthritis (JIA); and
1.2 The patient has experienced intolerable side effects, or has received insufficient benefit from, both etanercept and adalimumab; or

2 All of the following:

2.1 Treatment with a tumour necrosis factor alpha inhibitor is contraindicated; and
2.2 Patient has had polyarticular course JIA for 6 months duration or longer; and
2.3 To be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2.4 Any of the following:

2.4.1 At least 5 active joints and at least 3 joints with limited range of motion, pain or tenderness after a 3-month trial of methotrexate (at the maximum tolerated dose); or
2.4.2 Moderate or high disease activity (cJADAS10 score of at least 2.5) after a 3-month trial of methotrexate (at the maximum tolerated dose); or
2.4.3 Low disease activity (cJADAS10 score between 1.1 and 2.5) after a 6-month trial of methotrexate.

Initiation – idiopathic multicentric Castleman's disease
Haematologist, rheumatologist or Practitioner on the recommendation of a haematologist or rheumatologist
Re-assessment required after 6 months
All of the following:

1 Patient has severe HHV-8 negative idiopathic multicentric Castleman's disease; and
2 Treatment with an adequate trial of corticosteroids has proven ineffective; and
3 Tocilizumab to be administered at doses no greater than 8 mg/kg IV every 3-4 weeks.

Initiation – moderate to severe COVID-19
Therapy limited to 1 dose
All of the following:

1 Patient has confirmed (or probable) COVID-19; and
2 Oxygen saturation of < 92% on room air, or requiring supplemental oxygen; and
3 Patient is receiving adjunct systemic corticosteroids, or systemic corticosteroids are contraindicated; and
4 Tocilizumab is to be administered at doses no greater than 8mg/kg IV for a maximum of one dose; and
5 Tocilizumab is not to be administered in combination with barcitinib.

Continuation – Rheumatoid Arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
Either:

1 Following 6 months' initial treatment, the patient has at least a 50% decrease in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician; or
2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count from baseline and a clinically significant response to treatment in the opinion of the physician.

Continuation – systemic juvenile idiopathic arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
Either:

1 Following up to 6 months' initial treatment, the patient has achieved at least an American College of Rheumatology paediatric 30% improvement criteria (ACR Pedi 30) response from baseline; or
2 On subsequent reapplications, the patient demonstrates at least a continuing ACR Pedi 30 response from baseline.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – adult-onset Still's disease
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
the patient has a sustained improvement in inflammatory markers and functional status.

Continuation – polyarticular juvenile idiopathic arthritis
Rheumatologist or Practitioner on the recommendation of a rheumatologist
Re-assessment required after 6 months
Both:

1 Treatment is to be used as an adjunct to methotrexate therapy or monotherapy where use of methotrexate is limited by toxicity or intolerance; and
2 Either:
  2.1 Following 3 to 4 months' initial treatment, the patient has at least a 50% decrease in active joint count and an improvement in physician's global assessment from baseline; or
  2.2 On subsequent reapplications, the patient demonstrates at least a continuing 30% improvement in active joint count and continued improvement in physician's global assessment from baseline.

Continuation – idiopathic multicentric Castleman's disease
Haematologist, rheumatologist or Practitioner on the recommendation of a haematologist or rheumatologist
Re-assessment required after 12 months
the treatment remains appropriate and the patient has a sustained improvement in inflammatory markers and functional status.

Initiation – immune checkpoint inhibitor toxicity in malignancy*
Any relevant practitioner
Re-assessment required after 4 months
All of the following:

1 The individual requires treatment for moderate to severe autoimmune toxicity following immune checkpoint inhibitor treatment for malignancy; and
2 The individual has received insufficient benefit from use of corticosteroids; and
3 Tocilizumab is to be administered at a maximum dose of 8 mg/kg fortnightly.

Continuation – immune checkpoint inhibitor toxicity in malignancy*
Any relevant practitioner
Re-assessment required after 4 months
Both:

1 The individual has shown clinical improvement and ongoing treatment is required; and
2 Tocilizumab is to be administered at a maximum dose of 8 mg/kg fortnightly.

Note: Indications marked with * are unapproved indications.

TRASTUZUMAB (HERZUMA) – **Restricted** see terms below

⬇	Inj 150 mg vial – **5% DV Jun-24 to 31 May 2027**	100.00	1	**Herzuma**
⬇	Inj 440 mg vial – **5% DV Jun-24 to 31 May 2027**	293.35	1	**Herzuma**

➥ **Restricted** (RS2005)

Initiation – early breast cancer
Limited to 12 months treatment
Both:

1 The patient has early breast cancer expressing HER-2 IHC 3+ or ISH + (including FISH or other current technology; and
2 Maximum cumulative dose of 106 mg/kg (12 months' treatment).

Continuation – early breast cancer*
Re-assessment required after 12 months
Either:

1 All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology; and
1.2 The patient received prior adjuvant trastuzumab treatment for early breast cancer; and
1.3 Any of the following:
1.3.1 The patient has not previously received lapatinib treatment for HER-2 positive metastatic breast cancer; or
1.3.2 The patient discontinued lapatinib within 3 months due to intolerable side effects and the cancer did not progress whilst on lapatinib; or
1.3.3 he cancer has not progressed at any time point during the previous 12 months whilst on trastuzumab; and
1.4 Either:
1.4.1 Trastuzumab will not be given in combination with pertuzumab; or
1.4.2 All of the following:
1.4.2.1 Trastuzumab to be administered in combination with pertuzumab; and
1.4.2.2 Patient has not received prior treatment for their metastatic disease and has had a treatment-free interval of at least 12 months between prior (neo)adjuvant chemotherapy treatment and diagnosis of metastatic breast cancer; and
1.4.2.3 The patient has good performance status (ECOG grade 0-1); and
1.5 Trastuzumab to be discontinued at disease progression; or
2 All of the following:
2.1 Patient has previously discontinued treatment with trastuzumab in the metastatic setting for reasons other than severe toxicity or disease progression; and
2.2 Patient has signs of disease progression; and
2.3 Disease has not progressed during previous treatment with trastuzumab.

Note: * For patients with relapsed HER-2 positive disease who have previously received adjuvant trastuzumab for early breast cancer

Initiation – metastatic breast cancer

Re-assessment required after 12 months

All of the following:

1 The patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology); and
2 Either:
2.1 The patient has not previously received lapatinib treatment for HER-2 positive metastatic breast cancer; or
2.2 The patient discontinued lapatinib within 3 months due to intolerable side effects and the cancer did not progress whilst on lapatinib; and
3 Either:
3.1 Trastuzumab will not be given in combination with pertuzumab; or
3.2 All of the following:
3.2.1 Trastuzumab to be administered in combination with pertuzumab; and
3.2.2 Patient has not received prior treatment for their metastatic disease and has had a treatment-free interval of at least 12 months between prior (neo)adjuvant chemotherapy treatment and diagnosis of metastatic breast cancer; and
3.2.3 The patient has good performance status (ECOG grade 0-1); and
4 Trastuzumab to be discontinued at disease progression.

Continuation – metastatic breast cancer

Re-assessment required after 12 months

Either:

1 All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1.1 The patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology); and
1.2 The cancer has not progressed at any time point during the previous 12 months whilst on trastuzumab; and
1.3 Trastuzumab to be discontinued at disease progression; or

2 All of the following:
2.1 Patient has previously discontinued treatment with trastuzumab for reasons other than severe toxicity or disease progression; and
2.2 Patient has signs of disease progression; and
2.3 Disease has not progressed during previous treatment with trastuzumab.

Initiation – gastric, gastro-oesophageal junction and oesophageal cancer
Re-assessment required after 12 months
Both:
1 The patient has locally advanced or metastatic gastric, gastro-oesophageal junction or oesophageal cancer expressing HER-2 IHC 2+ FISH+ or IHC3+ (or other current technology); and
2 Patient has an ECOG score of 0-2.

Continuation – gastric, gastro-oesophageal junction and oesophageal cancer
Re-assessment required after 12 months
Both:
1 The cancer has not progressed at any time point during the previous 12 months whilst on trastuzumab; and
2 Trastuzumab to be discontinued at disease progression.

TRASTUZUMAB DERUXTECAN – **Restricted** see terms below

⬇	Inj 100 mg per ml, 1 ml vial	2,550.00	1	Enhertu

➥ **Restricted** (RS2082)

Initiation
Re-assessment required after 6 months
All of the following:
1 Patient has metastatic breast cancer expressing HER-2 IHC3+ or ISH+ (including FISH or other current technology); and
2 Patient has previously received trastuzumab and chemotherapy, separately or in combination; and
3 Either:
3.1 The patient has received prior therapy for metastatic disease; or
3.2 The patient developed disease recurrence during, or within six months of completing adjuvant therapy; and
4 Patient has a good performance status (ECOG 0-1); and
5 Patient has not received prior funded trastuzumab deruxtecan treatment; and
6 Treatment to be discontinued at disease progression.

Continuation
Re-assessment required after 6 months
Both:
1 The cancer has not progressed at any time point during the previous approval period whilst on trastuzumab deruxtecan; and
2 Treatment to be discontinued at disease progression.

Note: Prior or adjuvant therapy includes anthracycline, other chemotherapy, biological drugs, or endocrine therapy.

TRASTUZUMAB EMTANSINE – **Restricted** see terms below

⬇	Inj 100 mg vial	2,320.00	1	Kadcyla
⬇	Inj 160 mg vial	3,712.00	1	Kadcyla

➥ **Restricted** (RS2083)

Initiation – early breast cancer
All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient has early breast cancer expressing HER2 IHC3+ or ISH+; and
2 Documentation of pathological invasive residual disease in the breast and/or axiliary lymph nodes following completion of surgery; and
3 Patient has completed systemic neoadjuvant therapy with trastuzumab and chemotherapy prior to surgery; and
4 Disease has not progressed during neoadjuvant therapy; and
5 Patient has left ventricular ejection fraction of 45% or greater; and
6 Adjuvant treatment with trastuzumab emtansine to be commenced within 12 weeks of surgery; and
7 Trastuzumab emtansine to be discontinued at disease progression; and
8 Total adjuvant treatment duration must not exceed 42 weeks (14 cycles).

Initiation – metastatic breast cancer

Re-assessment required after 6 months

All of the following:

1 Patient has metastatic breast cancer expressing HER-2 IHC 3+ or ISH+ (including FISH or other current technology); and
2 Patient has previously received trastuzumab and chemotherapy, separately or in combination; and
3 Either:
  3.1 The patient has received prior therapy for metastatic disease*; or
  3.2 The patient developed disease recurrence during, or within six months of completing adjuvant therapy*; and
4 Patient has a good performance status (ECOG 0-1); and
5 Either:
  5.1 Patient does not have symptomatic brain metastases; or
  5.2 Patient has brain metastases and has received prior local CNS therapy; and
6 Either:
  6.1 Patient has not received prior funded trastuzumab emtansine or trastuzumab deruxtecan treatment; or
  6.2 Both:
    6.2.1 Patient has discontinued trastuzumab deruxtecan due to intolerance; and
    6.2.2 The cancer did not progress while on trastuzumab deruxtecan; and
7 Treatment to be discontinued at disease progression.

Continuation – metastatic breast cancer

Re-assessment required after 6 months

Both:

1 The cancer has not progressed at any time point during the previous approval period whilst on trastuzumab emtansine; and
2 Treatment to be discontinued at disease progression.

Note: *Note: Prior or adjuvant therapy includes anthracycline, other chemotherapy, biological drugs, or endocrine therapy.

USTEKINUMAB – **Restricted** see terms below

➥ **Restricted** (RS1942)

Initiation – Crohn's disease - adults

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with ustekinumab commenced prior to 1 February 2023 and met all remaining criteria (criterion 2) below at the time of commencing treatment; or
2 Both:
  2.1 Patient has active Crohn's disease; and
  2.2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.1 Patient has had an initial approval for prior biologic therapy for Crohn's disease and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or

2.2.2 Both:

2.2.2.1 Patient meets the initiation criteria for prior biologic therapies for Crohn's disease; and

2.2.2.2 Other biologics for Crohn's disease are contraindicated.

Continuation – Crohn's disease - adults

Re-assessment required after 12 months

Both:

1 Any of the following:

1.1 CDAI score has reduced by 100 points, or HBI score has reduced by 3 points, from when the patient was initiated on biologic therapy; or

1.2 CDAI score is 150 or less, or HBI is 4 or less; or

1.3 The patient has experienced an adequate response to treatment, but CDAI score and/or HBI score cannot be assessed; and

2 Ustekinumab to be administered at a dose no greater than 90 mg every 8 weeks.

Initiation – Crohn's disease - children*

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with ustekinumab commenced prior to 1 February 2023 and met all remaining criteria (criterion 2) below at the time of commencing treatment; or

2 Both:

2.1 Patient has active Crohn's disease; and

2.2 Either:

2.2.1 Patient has had an initial approval for prior biologic therapy and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or

2.2.2 Both:

2.2.2.1 Patient meets the initiation criteria for prior biologic therapies for Crohn's disease; and

2.2.2.2 Other biologics for Crohn's disease are contraindicated.

Note: Indication marked with * is an unapproved indication.

Continuation – Crohn's disease - children*

Re-assessment required after 12 months

Both:

1 Any of the following:

1.1 PCDAI score has reduced by 10 points from when the patient was initiated on biologic therapy; or

1.2 PCDAI score is 15 or less; or

1.3 The patient has experienced an adequate response to treatment, but CDAI score cannot be assessed; and

2 Ustekinumab to administered at a dose no greater than 90 mg every 8 weeks.

Note: Indication marked with * is an unapproved indication.

Initiation – ulcerative colitis

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with ustekinumab commenced prior to 1 February 2023 and met all remaining criteria (criterion 2) below at the time of commencing treatment; or

2 Both:

2.1 Patient has active ulcerative colitis; and

2.2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.1 Patient has had an initial approval for prior biologic therapy for ulcerative colitis and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or
2.2.2 Both:
2.2.2.1 Patient meets the initiation criteria for prior biologic therapies for ulcerative colitis; and
2.2.2.2 Other biologics for ulcerative colitis are contraindicated.

Continuation – ulcerative colitis
Re-assessment required after 12 months
Both:
1 Either:
1.1 The SCCAI score has reduced by 2 points or more from the SCCAI score since initiation on biologic therapy; or
1.2 PUCAI score has reduced by 10 points or more from the PUCAI score since initiation on biologic therapy*; and
2 Ustekinumab will be used at a dose no greater than 90 mg intravenously every 8 weeks.

Note: Criterion marked with * is for an unapproved indication.

VEDOLIZUMAB – **Restricted** see terms below

⬇	Inj 300 mg vial	3,313.00	1	Entyvio

➥ **Restricted** (RS1943)

Initiation – Crohn's disease - adults
Re-assessment required after 6 months
All of the following:
1 Patient has active Crohn's disease; and
2 Any of the following:
2.1 Patient has had an initial approval for prior biologic therapy and has experienced intolerable side effects or insufficient benefit to meet renewal criteria (unless contraindicated); or
2.2 Patient has a CDAI score of greater than or equal to 300, or HBI score of greater than or equal to 10; or
2.3 Patient has extensive small intestine disease affecting more than 50 cm of the small intestine; or
2.4 Patient has evidence of short gut syndrome or would be at risk of short gut syndrome with further bowel resection; or
2.5 Patient has an ileostomy or colostomy, and has intestinal inflammation; and
3 Any of the following:
3.1 Patient has tried but experienced an inadequate response to (including lack of initial response and/or loss of initial response) from prior therapy with immunomodulators and corticosteroids; or
3.2 Patient has experienced intolerable side effects from immunomodulators and corticosteroids; or
3.3 Immunomodulators and corticosteroids are contraindicated.

Continuation – Crohn's disease - adults
Re-assessment required after 2 years
Both:
1 Any of the following:
1.1 CDAI score has reduced by 100 points, or HBI score has reduced by 3 points, from when the patient was initiated on biologic therapy; or
1.2 CDAI score is 150 or less, or HBI is 4 or less; or
1.3 The patient has experienced an adequate response to treatment, but CDAI score and/or HBI score cannot be assessed; and
2 Vedolizumab to administered at a dose no greater than 300 mg every 8 weeks.

Initiation – Crohn's disease - children*
Re-assessment required after 6 months
All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Paediatric patient has active Crohn's disease; and
2 Any of the following:
  2.1 Patient has had an initial approval for prior biologic therapy and has experienced intolerable side effects or insufficient benefit to meet renewal criteria (unless contraindicated); or
  2.2 Patient has a Paediatric Crohn's Disease Activity Index (PCDAI) score of greater than or equal to 30; or
  2.3 Patient has extensive small intestine disease; and
3 Any of the following:
  3.1 Patient has tried but experienced an inadequate response to (including lack of initial response and/or loss of initial response) from prior therapy with immunomodulators and corticosteroids; or
  3.2 Patient has experienced intolerable side effects from immunomodulators and corticosteroids; or
  3.3 Immunomodulators and corticosteroids are contraindicated.

Note: Indication marked with * is an unapproved indication.

Continuation – Crohn's disease - children*

Re-assessment required after 2 years

Both:

1 Any of the following:
  1.1 PCDAI score has reduced by 10 points from when the patient was initiated on biologic therapy; or
  1.2 PCDAI score is 15 or less; or
  1.3 The patient has experienced an adequate response to treatment, but CDAI score cannot be assessed; and
2 Vedolizumab to administered at a dose no greater than 300mg every 8 weeks.

Note: Indication marked with * is an unapproved indication.

Initiation – ulcerative colitis

Re-assessment required after 6 months

All of the following:

1 Patient has active ulcerative colitis; and
2 Any of the following:
  2.1 Patient has had an initial approval for prior biologic therapy and has experienced intolerable side effects or insufficient benefit to meet renewal criteria (unless contraindicated); or
  2.2 Patient has a SCCAI score is greater than or equal to 4; or
  2.3 Patient's PUCAI score is greater than or equal to 20*; and
3 Any of the following:
  3.1 Patient has tried but experienced an inadequate response to (including lack of initial response and/or loss of initial response) from prior therapy with immunomodulators and corticosteroids; or
  3.2 Patient has experienced intolerable side effects from immunomodulators and corticosteroids; or
  3.3 Immunomodulators and corticosteroids are contraindicated.

Note: Indication marked with * is an unapproved indication.

Continuation – ulcerative colitis

Re-assessment required after 2 years

Both:

1 Either:
  1.1 The SCCAI score has reduced by 2 points or more from the SCCAI score since initiation on biologic therapy; or
  1.2 The PUCAI score has reduced by 10 points or more from the PUCAI score since initiation on biologic therapy *; and
2 Vedolizumab will be used at a dose no greater than 300 mg intravenously every 8 weeks.

Note: Indication marked with * is an unapproved indication.

Programmed Cell Death-1 (PD-1) Inhibitors

ATEZOLIZUMAB – **Restricted** see terms on the next page

⬇	Inj 60 mg per ml, 20 ml vial	9,503.00	1	Tecentriq

Initiation – non-small cell lung cancer second line monotherapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Patient has locally advanced or metastatic non-small cell lung cancer; and
2 Patient has not received prior funded treatment with an immune checkpoint inhibitor for NSCLC; and
3 For patients with non-squamous histology there is documentation confirming that the disease does not express activating mutations of EGFR or ALK tyrosine kinase unless not possible to ascertain; and
4 Patient has an ECOG 0-2; and
5 Patient has documented disease progression following treatment with at least two cycles of platinum-based chemotherapy; and
6 Atezolizumab is to be used as monotherapy at a dose of 1200 mg every three weeks (or equivalent) for a maximum of 16 weeks; and
7 Baseline measurement of overall tumour burden is documented clinically and radiologically.

Continuation – non-small cell lung cancer second line monotherapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Any of the following:
  1.1 Patient's disease has had a complete response to treatment; or
  1.2 Patient's disease has had a partial response to treatment; or
  1.3 Patient has stable disease; and
2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period; and
3 No evidence of disease progression; and
4 The treatment remains clinically appropriate and patient is benefitting from treatment; and
5 Atezolizumab to be used at a maximum dose of 1200 mg every three weeks (or equivalent); and
6 Treatment with atezolizumab to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – unresectable hepatocellular carcinoma

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with atezolizumab and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Patient has locally advanced or metastatic, unresectable hepatocellular carcinoma; and
  2.2 Patient has preserved liver function (Child-Pugh A); and
  2.3 Transarterial chemoembolisation (TACE) is unsuitable; and
  2.4 Any of the following:
    2.4.1 Patient has not received prior systemic therapy for the treatment of hepatocellular carcinoma; or
    2.4.2 Patient received funded lenvatinib before 1 March 2025; or
    2.4.3 Both:
      2.4.3.1 Patient has experienced treatment-limiting toxicity from treatment with lenvatinib; and
      2.4.3.2 No disease progression since initiation of lenvatinib; and
  2.5 Patient has an ECOG performance status of 0-2; and
  2.6 To be given in combination with bevacizumab.

Continuation – unresectable hepatocellular carcinoma

Re-assessment required after 6 months

no evidence of disease progression.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
DURVALUMAB – **Restricted** see terms below			
⬇ Inj 50 mg per ml, 10 ml vial	4,700.00	1	Imfinzi

➥ **Restricted** (RS2084)

Initiation – Non-small cell lung cancer

Re-assessment required after 4 months

All of the following:

1 Either:
  1.1 Patient has histologically or cytologically documented stage III, locally advanced, unresectable non-small cell lung cancer (NSCLC); or
  1.2 Patient has histologically or cytologically documented stage IIb (T1N2a only), locally advanced, unresectable non-small cell lung cancer (NSCLC); and
2 Patient has received two or more cycles of platinum-based chemotherapy concurrently with definitive radiation therapy; and
3 Patient has no disease progression following the second or subsequent cycle of platinum-based chemotherapy with definitive radiation therapy treatment; and
4 Patient has a ECOG performance status of 0 or 1; and
5 Patient has completed last radiation dose within 8 weeks of starting treatment with durvalumab; and
6 Patient must not have received prior PD-1 or PD-L1 inhibitor therapy for this condition; and
7 Either:
  7.1 Durvalumab is to be used at a maximum dose of no greater than 10 mg/kg every 2 weeks; or
  7.2 Durvalumab is to be used at a flat dose of 1500 mg every 4 weeks; and
8 Treatment with durvalumab to cease upon signs of disease progression.

Continuation – Non-small cell lung cancer

Re-assessment required after 4 months

All of the following:

1 The treatment remains clinically appropriate and the patient is benefitting from treatment; and
2 Either:
  2.1 Durvalumab is to be used at a maximum dose of no greater than 10 mg/kg every 2 weeks; or
  2.2 Durvalumab is to be used at a flat dose of 1500 mg every 4 weeks; and
3 Treatment with durvalumab to cease upon signs of disease progression; and
4 Total continuous treatment duration must not exceed 12 months.

IPILIMUMAB – **Restricted** see terms below			
⬇ Inj 5 mg per ml, 10 ml vial	5,000.00	1	Yervoy
⬇ Inj 5 mg per ml, 40 ml vial	20,000.00	1	Yervoy

➥ **Restricted** (RS2115)

Initiation – renal cell carcinoma

Limited to 4 months treatment

Either:

1 The patient is currently on treatment with ipilimumab and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 The patient has metastatic renal cell carcinoma; and
  2.2 The patient is treatment naive; and
  2.3 The patient has ECOG performance status 0-2; and
  2.4 The disease is predominantly of clear cell histology; and
  2.5 Any of the following:
    2.5.1 The patient has sarcomatoid histology; or
    2.5.2 Haemoglobin levels less than the lower limit of normal; or

Initiation – unresectable or metastatic melanoma

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist
Limited to 4 months treatment
All of the following:

1 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
2 Baseline measurement of overall tumour burden is documented clinically and radiologically; and
3 The individual has ECOG performance 0-2; and
4 Either:
4.1 The individual has not received funded pembrolizumab; or
4.2 Both:
4.2.1 The individual has received an initial Special Authority approval for pembrolizumab and has discontinued pembrolizumab within 12 weeks of starting treatment due to intolerance; and
4.2.2 The cancer did not progress while the individual was on pembrolizumab; and
5 Any of the following:
5.1 The individual has been diagnosed in the metastatic or unresectable stage III or IV setting; or
5.2 The individual did not receive treatment in the perioperative setting with a PD-1/PD-L1 inhibitor; or
5.3 All of the following:
5.3.1 The individual received treatment in the perioperative setting with a PD-1/PD-L1 inhibitor; and
5.3.2 The individual did not experience disease recurrence while on treatment with that PD-1/PD-L1 inhibitor; and
5.3.3 The individual did not experience disease recurrence within six months of completing perioperative treatment with a PD-1/PD-L1 inhibitor.

Continuation – unresectable or metastatic melanoma, less than 24 months on treatment

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist
Re-assessment required after 4 months
Either:

1 Both:
1.1 Any of the following:
1.1.1 The individual's disease has had a complete response to treatment; or
1.1.2 The individual's disease has had a partial response to treatment; or
1.1.3 The individual has stable disease; and
1.2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period; or
2 All of the following:
2.1 The individual has previously discontinued treatment with nivolumab for reasons other than severe toxicity or disease progression; and
2.2 The individual has signs of disease progression; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.3 Disease has not progressed during previous treatment with nivolumab.

Continuation – unresectable or metastatic melanoma, more than 24 months on treatment

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Both:

1 The individual has been on treatment for more than 24 months; and

2 Either:

2.1 Both:

2.1.1 Any of the following:

2.1.1.1 The individual's disease has had a complete response to treatment; or

2.1.1.2 The individual's disease has had a partial response to treatment; or

2.1.1.3 The individual has stable disease; and

2.1.2 Response to treatment in target lesions has been determined by comparable radiologic or clinical assessment following the most recent treatment period; or

2.2 All of the following:

2.2.1 The individual has previously discontinued treatment with nivolumab for reasons other than severe toxicity or disease progression; and

2.2.2 The individual has signs of disease progression; and

2.2.3 Disease has not progressed during previous treatment with nivolumab.

Initiation – renal cell carcinoma, first line

Limited to 4 months treatment

Either:

1 Patient is currently on treatment with nivolumab and met all remaining criteria prior to commencing treatment; or

2 All of the following:

2.1 The patient has metastatic renal cell carcinoma; and

2.2 The patient is treatment naive; and

2.3 The patient has ECOG performance status 0-2; and

2.4 The disease is predominantly of clear cell histology; and

2.5 Any of the following:

2.5.1 The patient has sarcomatoid histology; or

2.5.2 Haemoglobin levels less than the lower limit of normal; or

2.5.3 Corrected serum calcium level greater than 10 mg/dL (2.5 mmol/L); or

2.5.4 Neutrophils greater than the upper limit of normal; or

2.5.5 Platelets greater than the upper limit of normal; or

2.5.6 Interval of less than 1 year from original diagnosis to the start of systemic therapy; or

2.5.7 Karnofsky performance score of less than or equal to 70; and

2.6 Nivolumab is to be used in combination with ipilimumab for the first four treatment cycles at a maximum dose of 3 mg/kg; and

2.7 Nivolumab is to be used at a maximum maintenance dose of 240 mg every 2 weeks (or equivalent).

Initiation – renal cell carcinoma, second line

Limited to 4 months treatment

All of the following:

1 Patient has metastatic renal-cell carcinoma; and

2 The disease is of predominant clear-cell histology; and

3 Patient has ECOG performance status 0-2; and

4 Patient has documented disease progression following one or two previous regimens of antiangiogenic therapy; and

5 Patient has not previously received a funded immune checkpoint inhibitor; and

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

6 Nivolumab is to be used as monotherapy at a maximum dose of 240 mg every 2 weeks (or equivalent) and discontinued at disease progression.

Continuation – renal cell carcinoma

Re-assessment required after 4 months

All of the following:

1 Any of the following:
- 1.1 Patient's disease has had a complete response to treatment; or
- 1.2 Patient's disease has had a partial response to treatment; or
- 1.3 Patient has stable disease; and

2 No evidence of disease progression; and

3 Nivolumab is to be used as monotherapy at a maximum dose of 240 mg every 2 weeks (or equivalent) and discontinued at disease progression.

PEMBROLIZUMAB – **Restricted** see terms below

⬇ Inj 25 mg per ml, 4 ml vial ..... 4,680.00 1 Keytruda

➥ **Restricted** (RS2134)

Initiation – stage III or IV resectable melanoma - neoadjuvant

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 The individual is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or

2 All of the following:
- 2.1 The individual has resectable stage IIIB, IIIC, IIID or IV melanoma (excluding uveal) (see note); and
- 2.2 The individual has not received prior funded systemic treatment in the perioperative setting for their stage IIIB, IIIC, IIID or IV melanoma; and
- 2.3 Treatment must be prior to complete surgical resection; and
- 2.4 Pembrolizumab must be administered as monotherapy; and
- 2.5 The individual has ECOG performance score 0-2; and
- 2.6 Pembrolizumab to be administered at a fixed dose of 200 mg every 3 weeks (or equivalent).

Continuation – stage III or IV resectable melanoma - neoadjuvant

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Any of the following:

1 Both:
- 1.1 The individual has received neoadjuvant treatment with an immune checkpoint inhibitor; and
- 1.2 The individual meets initiation criteria for pembrolizumab for stage III or IV resected melanoma – adjuvant; or

2 Both:
- 2.1 The individual has received neoadjuvant and adjuvant treatment with an immune checkpoint inhibitor; and
- 2.2 The individual meets continuation criteria for pembrolizumab for stage III or IV resected melanoma – adjuvant; or

3 All of the following:
- 3.1 The individual has received neoadjuvant and adjuvant treatment with an immune checkpoint inhibitor; and
- 3.2 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
- 3.3 The individual meets initiation criteria for pembrolizumab for unresectable or metastatic melanoma; or

4 All of the following:
- 4.1 The individual has received neoadjuvant and adjuvant treatment with an immune checkpoint inhibitor; and
- 4.2 The individual has received treatment with an immune checkpoint inhibitor for unresectable or metastatic

continued…

melanoma; and

4.3 The individual meets continuation criteria for pembrolizumab for unresectable or metastatic melanoma.

Notes:

a) Stage IIIB, IIIC, IIID or IV melanoma defined as per American Joint Committee on Cancer (AJCC) 8th Edition
b) Initiating treatment within 13 weeks of complete surgical resection means either 13 weeks after resection (primary or lymphadenectomy) or 13 weeks prior to the scheduled date of the resection (primary or lymphadenectomy)

Initiation – stage III or IV resected melanoma - adjuvant

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 The individual is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or

2 All of the following:
- 2.1 The individual has resected stage IIIB, IIIC, IIID or IV melanoma (excluding uveal) (see note a); and
- 2.2 Adjuvant treatment with pembrolizumab is required; and
- 2.3 The individual has not received prior funded systemic treatment in the adjuvant setting for stage IIIB, IIIC, IIID or IV melanoma; and
- 2.4 Treatment must be in addition to complete surgical resection; and
- 2.5 Treatment must be initiated within 13 weeks of complete surgical resection, unless delay is necessary due to post-surgery recovery (see note b); and
- 2.6 Pembrolizumab must be administered as monotherapy; and
- 2.7 The individual has ECOG performance score 0-2; and
- 2.8 Pembrolizumab to be administered at a fixed dose of 200 mg every 3 weeks (or equivalent).

Notes:

a) Stage IIIB, IIIC, IIID or IV melanoma defined as per American Joint Committee on Cancer (AJCC) 8th Edition
b) Initiating treatment within 13 weeks of complete surgical resection means 13 weeks after resection (primary or lymphadenectomy)

Continuation – stage III or IV resected melanoma - adjuvant

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Any of the following:

1 All of the following:
- 1.1 No evidence of disease recurrence; and
- 1.2 Pembrolizumab must be administered as monotherapy; and
- 1.3 Pembrolizumab to be administered at a fixed dose of 200 mg every three weeks (or equivalent) for a maximum of 12 months total treatment course, including any systemic neoadjuvant treatment; and
- 1.4 Treatment to be discontinued at signs of disease recurrence or at completion of 12 months total treatment course (equivalent to 18 cycles at a dose of 200 mg every 3 weeks), including any systemic neoadjuvant treatment; or

2 All of the following:
- 2.1 The individual has received adjuvant treatment with an immune checkpoint inhibitor; and
- 2.2 The individual has metastatic or unresectable melanoma (excluding uveal) stage III or IV; and
- 2.3 The individual meets initiation criteria for pembrolizumab for unresectable or metastatic melanoma; or

3 All of the following:
- 3.1 The individual has received adjuvant treatment with an immune checkpoint inhibitor; and
- 3.2 The individual has received treatment with an immune checkpoint inhibitor for unresectable or metastatic melanoma; and
- 3.3 The individual meets continuation criteria for pembrolizumab for unresectable or metastatic melanoma.

2.1.1.3 The individual has stable disease; and

2.1.2 Response to treatment in target lesions has been determined by comparable radiologic or clinical assessment following the most recent treatment period; and

2.1.3 The treatment remains clinically appropriate and the individual is benefitting from the treatment; or

2.2 All of the following:

2.2.1 The individual has previously discontinued treatment with pembrolizumab for reasons other than severe toxicity or disease progression; and

2.2.2 The individual has signs of disease progression; and

2.2.3 Disease has not progressed during previous treatment with pembrolizumab.

Initiation – non-small cell lung cancer first-line monotherapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Patient has locally advanced or metastatic, unresectable, non-small cell lung cancer; and

2 Patient has not had chemotherapy for their disease in the palliative setting; and

3 Patient has not received prior funded treatment with an immune checkpoint inhibitor for NSCLC; and

4 For patients with non-squamous histology there is documentation confirming that the disease does not express activating mutations of EGFR or ALK tyrosine kinase unless not possible to ascertain; and

5 Pembrolizumab to be used as monotherapy; and

6 Either:

6.1 There is documentation confirming the disease expresses PD-L1 at a level greater than or equal to 50% as determined by a validated test unless not possible to ascertain; or

6.2 Both:

6.2.1 There is documentation confirming the disease expresses PD-L1 at a level greater than or equal to 1% as determined by a validated test unless not possible to ascertain; and

6.2.2 Chemotherapy is determined to be not in the best interest of the patient based on clinician assessment; and

7 Patient has an ECOG 0-2; and

8 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks; and

9 Baseline measurement of overall tumour burden is documented clinically and radiologically.

Continuation – non-small cell lung cancer first-line monotherapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Any of the following:

1.1 Patient's disease has had a complete response to treatment; or

1.2 Patient's disease has had a partial response to treatment; or

1.3 Patient has stable disease; and

2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period; and

3 No evidence of disease progression; and

4 The treatment remains clinically appropriate and patient is benefitting from treatment; and

5 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent); and

6 Treatment with pembrolizumab to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – non-small cell lung cancer first-line combination therapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Patient has locally advanced or metastatic, unresectable, non-small cell lung cancer; and
2 The patient has not had chemotherapy for their disease in the palliative setting; and
3 Patient has not received prior funded treatment with an immune checkpoint inhibitor for NSCLC; and
4 For patients with non-squamous histology there is documentation confirming that the disease does not express activating mutations of EGFR or ALK tyrosine kinase unless not possible to ascertain; and
5 Pembrolizumab to be used in combination with platinum-based chemotherapy; and
6 Patient has an ECOG 0-2; and
7 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks; and
8 Baseline measurement of overall tumour burden is documented clinically and radiologically.

Continuation – non-small cell lung cancer first-line combination therapy

Medical oncologist or any relevant practitioner on the recommendation of a medical oncologist

Re-assessment required after 4 months

All of the following:

1 Any of the following:
  1.1 Patient's disease has had a complete response to treatment; or
  1.2 Patient's disease has had a partial response to treatment; or
  1.3 Patient has stable disease; and
2 Response to treatment in target lesions has been determined by comparable radiologic assessment following the most recent treatment period; and
3 No evidence of disease progression; and
4 The treatment remains clinically appropriate and patient is benefitting from treatment; and
5 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent); and
6 Treatment with pembrolizumab to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – breast cancer, advanced

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 6 months

Either:

1 Patient is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Either:
    2.1.1 Patient has recurrent or de novo unresectable, inoperable locally advanced triple-negative breast cancer (that does not express ER, PR or HER2 IHC3+ or ISH+ [including FISH or other technology]); or
    2.1.2 Patient has recurrent or de novo metastatic triple-negative breast cancer (that does not express ER, PR or HER2 IHC3+ or ISH+ [including FISH or other technology]; and
  2.2 Patient is treated with palliative intent; and
  2.3 Patient's cancer has confirmed PD-L1 Combined Positive Score (CPS) is greater than or equal to 10; and
  2.4 Patient has received no prior systemic therapy in the palliative setting; and
  2.5 Patient has an ECOG score of 0–2; and
  2.6 Pembrolizumab is to be used in combination with chemotherapy; and
  2.7 Baseline measurement of overall tumour burden is documented clinically and radiologically; and
  2.8 Pembrolizumab is to be used at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks.

Continuation – breast cancer, advanced

Any relevant practitioner

Re-assessment required after 6 months

All of the following:

1 Any of the following:
  1.1 Patient's disease has had a complete response to treatment; or
  1.2 Patient's disease has had a partial response to treatment; or
  1.3 Patient has stable disease; and
2 No evidence of disease progression; and
3 Response to treatment in target lesions has been determined by a comparable radiologic assessment following the most recent treatment period; and
4 Pembrolizumab is to be used at a maximum dose of 200 mg every three weeks (or equivalent); and
5 Treatment with pembrolizumab is to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – head and neck squamous cell carcinoma

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 Patient is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Patient has recurrent or metastatic head and neck squamous cell carcinoma of mucosal origin (excluding nasopharyngeal carcinoma) that is incurable by local therapies; and
  2.2 Patient has not received prior systemic therapy in the recurrent or metastatic setting; and
  2.3 Patient has a positive PD-L1 combined positive score (CPS) of greater than or equal to 1; and
  2.4 Patient has an ECOG performance score of 0-2; and
  2.5 Either:
    2.5.1 Pembrolizumab to be used in combination with platinum-based chemotherapy; or
    2.5.2 Pembrolizumab to be used as monotherapy; and
  2.6 Pembrolizumab is to be used at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks.

Continuation – head and neck squamous cell carcinoma

Any relevant practitioner

Re-assessment required after 4 months

All of the following:

1 Any of the following:
  1.1 Patient's disease has had a complete response to treatment; or
  1.2 Patient's disease has had a partial response to treatment; or
  1.3 Patient has stable disease; and
2 No evidence of disease progression; and
3 Pembrolizumab is to be used at a maximum dose of 200 mg every three weeks (or equivalent); and
4 Treatment with pembrolizumab is to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – MSI-H/dMMR advanced colorectal cancer

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 Individual is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2 All of the following:

2.1 Either:

2.1.1 Individual has deficient mismatch repair (dMMR) or microsatellite instability-high (MSI-H) metastatic colorectal cancer; or

2.1.2 Individual has deficient mismatch repair (dMMR) or microsatellite instability-high (MSI-H) unresectable colorectal cancer; and

2.2 Individual is treated with palliative intent; and

2.3 Individual has not previously received funded treatment with pembrolizumab for MSI-H/dMMR advanced colorectal cancer; and

2.4 Individual has an ECOG performance score of 0-2; and

2.5 Baseline measurement of overall tumour burden is documented clinically and radiologically; and

2.6 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks.

Continuation – MSI-H/dMMR advanced colorectal cancer

Any relevant practitioner

Re-assessment required after 4 months

All of the following:

1 No evidence of disease progression; and

2 Pembrolizumab to be used at a maximum dose of 200 mg every three weeks (or equivalent); and

3 Treatment with pembrolizumab is to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – Urothelial carcinoma

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 Patient is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or

2 All of the following:

2.1 Patient has inoperable locally advanced (T4) or metastatic urothelial carcinoma; and

2.2 Patient has an ECOG performance score of 0-2; and

2.3 Patient has documented disease progression following treatment with chemotherapy; and

2.4 Pembrolizumab to be used as monotherapy at a maximum dose of 200 mg every three weeks (or equivalent) for a maximum of 16 weeks.

Continuation – Urothelial carcinoma

Any relevant practitioner

Re-assessment required after 4 months

All of the following:

1 Any of the following:

1.1 Patient's disease has had a complete response to treatment; or

1.2 Patient's disease has had a partial response to treatment; or

1.3 Patient has stable disease; and

2 No evidence of disease progression; and

3 Pembrolizumab is to be used as monotherapy at a maximum dose of 200 mg every three weeks (or equivalent); and

4 Treatment with pembrolizumab is to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Initiation – relapsed/refractory Hodgkin lymphoma

Relevant specialist or any relevant practitioner on the recommendation of a relevant specialist

Re-assessment required after 4 months

Either:

1 Individual is currently on treatment with pembrolizumab and met all remaining criteria prior to commencing treatment; or

2 All of the following:

2.1 Either:

2.1.1 Both:

2.1.1.1 Individual has relapsed/refractory Hodgkin lymphoma after two or more lines of chemotherapy; and

2.1.1.2 Individual is ineligible for autologous stem cell transplant; or

2.1.2 Individual has relapsed/refractory Hodgkin lymphoma and has previously undergone an autologous stem cell transplant; and

2.2 Individual has not previously received funded pembrolizumab for relapsed/refractory Hodgkin lymphoma; and

2.3 Pembrolizumab to be administered at doses no greater than 200 mg once every 3 weeks.

Continuation – relapsed/refractory Hodgkin lymphoma

Any relevant practitioner

Re-assessment required after 6 months

Both:

1 Patient has received a partial or complete response to pembrolizumab; and

2 Treatment with pembrolizumab is to cease after a total duration of 24 months from commencement (or equivalent of 35 cycles dosed every 3 weeks).

Re-assessment required after 4 months
Either:

1 All of the following:
  1.1 The patient has metastatic renal cell carcinoma; and
  1.2 The disease is of predominant clear-cell histology; and
  1.3 The patient has documented disease progression following one previous line of treatment; and
  1.4 The patient has an ECOG performance status of 0-2; and
  1.5 Everolimus is to be used in combination with lenvatinib; or
2 All of the following:
  2.1 Patient has received funded treatment with nivolumab for the second line treatment of metastatic renal cell carcinoma; and
  2.2 Patient has experienced treatment limiting toxicity from treatment with nivolumab; and
  2.3 Everolimus is to be used in combination with lenvatinib; and
  2.4 There is no evidence of disease progression.

Continuation – renal cell carcinoma
Re-assessment required after 4 months
there is no evidence of disease progression.

➥ **Restricted** (RS1991)

Initiation
For rescue therapy for an organ transplant recipient.
Notes: Rescue therapy defined as unresponsive to calcineurin inhibitor treatment as defined by refractory rejection; or intolerant to calcineurin inhibitor treatment due to any of the following:

- GFR < 30 ml/min; or
- Rapidly progressive transplant vasculopathy; or
- Rapidly progressive obstructive bronchiolitis; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

- HUS or TTP; or
- Leukoencepthalopathy; or
- Significant malignant disease

Initiation – severe non-malignant lymphovascular malformations*

Re-assessment required after 6 months

All of the following:

1 Patient has severe non-malignant lymphovascular malformation*; and
2 Any of the following:
  2.1 Malformations are not adequately controlled by sclerotherapy and surgery; or
  2.2 Malformations are widespread/extensive and sclerotherapy and surgery are not considered clinically appropriate; or
  2.3 Sirolimus is to be used to reduce malformation prior to consideration of surgery; and
3 Patient is being treated by a specialist lymphovascular malformation multi-disciplinary team; and
4 Patient has measurable disease as defined by RECIST version 1.1 (see Note).

Continuation – severe non-malignant lymphovascular malformations*

Re-assessment required after 12 months

All of the following:

1 Either:
  1.1 Patient's disease has had either a complete response or a partial response to treatment, or patient has stable disease according to RECIST version 1.1 (see Note); or
  1.2 Patient's disease has stabilised or responded clinically and disease response to treatment has been clearly documents in patient notes; and
2 No evidence of progressive disease; and
3 The treatment remains clinically appropriate and the patient is benefitting from the treatment.

Notes: Baseline assessment and disease responses to be assessed according to the Response Evaluation Criteria in Solid Tumours (RECIST) version 1.1 (Eisenhauer et al. Eur J Cancer 2009;45:228-47)
Indications marked with * are unapproved indications

Initiation – renal angiomyolipoma(s) associated with tuberous sclerosis complex*

Nephrologist or urologist

Re-assessment required after 6 months

Both:

1 Patient has tuberous sclerosis complex*; and
2 Evidence of renal angiomyolipoma(s) measuring 3 cm or greater and that have shown interval growth.

Continuation – renal angiomyolipoma(s) associated with tuberous sclerosis complex*

Re-assessment required after 12 months

All of the following:

1 Documented evidence of renal angiomyolipoma reduction or stability by magnetic resonance imaging (MRI) or ultrasound; and
2 Demonstrated stabilisation or improvement in renal function; and
3 The patient has not experienced angiomyolipoma haemorrhage or significant adverse effects to sirolimus treatment; and
4 The treatment remains appropriate and the patient is benefitting from treatment.

Note: Indications marked with * are unapproved indications

Initiation – refractory seizures associated with tuberous sclerosis complex*

Neurologist

Re-assessment required after 6 months

All of the following:

1 Patient has epilepsy with a background of documented tuberous sclerosis complex*; and
2 Either:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1 Both:

2.1.1 Vigabatrin has been trialled and has not adequately controlled seizures; and

2.1.2 Seizures are not adequately controlled by, or the patient has experienced unacceptable side effects from, optimal treatment with at least two of the following: sodium valproate, topiramate, levetiracetam, carbamazepine, lamotrigine, phenytoin sodium, and lacosamide (see Note); or

2.2 Both:

2.2.1 Vigabatrin is contraindicated; and

2.2.2 Seizures are not adequately controlled by, or the patient has experienced unacceptable side effects from, optimal treatment with at least three of the following: sodium valproate, topiramate, levetiracetam, carbamazepine, lamotrigine, phenytoin sodium, and lacosamide (see Note); and

3 Seizures have a significant impact on quality of life; and

4 Patient has been assessed and surgery is considered inappropriate for this patient, or the patient has been assessed and would benefit from mTOR inhibitor treatment prior to surgery.

Note: Those of childbearing potential are not required to trial phenytoin sodium, sodium valproate, and topiramate. Those who can father children are not required to trial sodium valproate.

Continuation – refractory seizures associated with tuberous sclerosis complex*

Neurologist

Re-assessment required after 12 months

demonstrated significant and sustained improvement in seizure rate (e.g. 50% reduction in seizure frequency) or severity and/or patient quality of life compared with baseline prior to starting sirolimus treatment.

Note: Indications marked with * are unapproved indications

JAK inhibitors

UPADACITINIB – **Restricted** see terms below

⬇	Tab modified-release 30 mg	2,033.00	28	Rinvoq
⬇	Tab modified-release 45 mg	3,049.00	28	Rinvoq

➥ **Restricted** (RS2120)

Initiation – Rheumatoid Arthritis (patients previously treated with adalimumab or etanercept)

Limited to 6 months treatment

All of the following:

1 The individual has had an initial Special Authority approval for adalimumab and/or etanercept for rheumatoid arthritis; and

2 Either:

2.1 The individual has experienced intolerable side effects with adalimumab and/or etanercept; or

2.2 The individual has received insufficient benefit from at least a three-month trial of adalimumab and/or etanercept such that they do not meet the renewal criteria for rheumatoid arthritis; and

3 Any of the following:

3.1 Rituximab is not clinically appropriate; or

3.2 The individual is seronegative for both anti-cyclic citrullinated peptide (CCP) antibodies and rheumatoid factor; or

3.3 Both:

3.3.1 The individual has been started on rituximab for rheumatoid arthritis in a Health NZ Hospital; and

3.3.2 Either:

3.3.2.1 The individual has experienced intolerable side effects with rituximab; or

3.3.2.2 At four months following the initial course of rituximab the individual has received insufficient benefit such that they do not meet the renewal criteria for rheumatoid arthritis.

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

Continuation – Rheumatoid Arthritis

Re-assessment required after 6 months

Either:

1 Following 6 months' initial treatment, the individual has experienced at least a 50% decrease in active joint count from baseline; or
2 On subsequent reapplications, the individual has experienced at least a continuing 30% improvement in active joint count from baseline.

Initiation – Atopic dermatitis

Re-assessment required after 6 months

Either:

1 Individual is currently on treatment with upadacitinib for atopic dermatitis and met all remaining criteria prior to commencing treatment; or
2 All of the following:
  2.1 Individual has moderate to severe atopic dermatitis, severity as defined by an Eczema Area and Severity Index (EASI) score of greater than or equal to 16 or a Dermatology Life Quality Index (DLQI) score of greater than or equal to 10; and
  2.2 Individual has received insufficient benefit from topical therapy (including topical corticosteroids or topical calcineurin inhibitors) for a 28-day trial within the last 6 months, unless contraindicated to all; and
  2.3 Individual has trialled and received insufficient benefit from at least one systemic therapy for a minimum of three months (eg ciclosporin, azathioprine, methotrexate or mycophenolate mofetil), unless contraindicated to all; and
  2.4 An EASI assessment or DLQI assessment has been completed for at least the most recent prior treatment course, preferably while still on treatment but no longer than 1 month following cessation of each prior treatment course; and
  2.5 The most recent EASI or DQLI assessment is no more than 1 month old at the time of application.

Continuation – Atopic dermatitis

Re-assessment required after 12 months

Either:

1 Individual has received a 75% or greater reduction in EASI score (EASI 75) as compared to baseline EASI prior to commencing upadacitinib; or
2 Individual has received a DLQI improvement of 4 or more as compared to baseline DLQI prior to commencing upadacitinib.

Initiation – Crohn's disease – adult

Re-assessment required after 6 months

Either:

1 Individual is currently on treatment with upadacitinib for Crohn's disease and met all remaining criteria prior to commencing treatment; or
2 Both:
  2.1 Individual has active Crohn's disease; and
  2.2 Either:
    2.2.1 Individual has had an initial approval for prior biologic therapy and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or
    2.2.2 Both:
      2.2.2.1 Individual meets the initiation criteria for prior biologic therapies for Crohn's disease; and
      2.2.2.2 Other biologic therapies for Crohn's disease are contraindicated.

Continuation – Crohn's disease – adult

Re-assessment required after 2 years

Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 CDAI score has reduced by 100 points from the CDAI score when the individual was initiated on biologic therapy; or
2 HBI score has reduced by 3 points from when individual was initiated on biologic therapy; or
3 CDAI score is 150 or less; or
4 HBI score is 4 or less; or
5 The individual has experienced an adequate response to treatment, but CDAI score cannot be assessed.

Initiation – Crohn's disease – children

Re-assessment required after 6 months

Either:

1 Individual is currently on treatment with upadacitinib for Crohn's disease and met all remaining criteria prior to commencing treatment; or
2 Both:
  2.1 Child has active Crohn's disease; and
  2.2 Either:
    2.2.1 Child has had an initial approval for prior biologic therapy for Crohn's disease and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or
    2.2.2 Both:
      2.2.2.1 Child meets the initiation criteria for prior biologic therapies for Crohn's disease; and
      2.2.2.2 Other biologic therapies for Crohn's disease are contraindicated.

Continuation – Crohn's disease – children

Re-assessment required after 2 years

Any of the following:

1 PCDAI score has reduced by 10 points from when the child was initiated on treatment; or
2 PCDAI score is 15 or less; or
3 The child has experienced an adequate response to treatment, but PCDAI score cannot be assessed.

Note: Indications marked with * are unapproved indications.

Initiation – Ulcerative colitis

Re-assessment required after 6 months

Either:

1 Individual is currently on treatment with upadacitinib for ulcerative colitis and met all remaining criteria prior to commencing treatment; or
2 Both:
  2.1 Individual has active ulcerative colitis; and
  2.2 Either:
    2.2.1 Individual has had an initial approval for prior biologic therapy for ulcerative colitis and has experienced intolerable side effects or insufficient benefit to meet renewal criteria; or
    2.2.2 Both:
      2.2.2.1 Individual meets the initiation criteria for prior biologic therapies for ulcerative colitis; and
      2.2.2.2 Other biologic therapies for ulcerative colitis are contraindicated.

Continuation – Ulcerative colitis

Re-assessment required after 2 years

Either:

1 The SCCAI score has reduced by 2 points or more from the SCCAI score when the individual was initiated on treatment; or
2 PUCAI score has reduced by 10 points or more from the PUCAI score when the individual was initiated on treatment.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

Antiallergy Preparations

Allergic Emergencies

ADRENALINE – **Restricted** see terms below
- ⬇ Inj 0.15 mg per 0.3 ml auto-injector – **5% DV Dec-25 to 2028** ..... 85.50 — 1 — **Epipen Jr**
- ⬇ Inj 0.3 mg per 0.3 ml auto-injector – **5% DV Dec-25 to 2028** ..... 85.50 — 1 — **Epipen**

➥ **Restricted** (RS1944)

Initiation – anaphylaxis

Either:

1 Patient has experienced a previous anaphylactic reaction which has resulted in presentation to a hospital or emergency department; or
2 Patient has been assessed to be at significant risk of anaphylaxis by a relevant practitioner.

ICATIBANT – **Restricted** see terms below
- ⬇ Inj 10 mg per ml, 3 ml prefilled syringe ..... 2,668.00 — 1 — Firazyr

➥ **Restricted** (RS1501)

Initiation

Clinical immunologist or relevant specialist

Re-assessment required after 12 months

Both:

1 Supply for anticipated emergency treatment of laryngeal/oro-pharyngeal or severe abdominal attacks of acute hereditary angioedema (HAE) for patients with confirmed diagnosis of C1-esterase inhibitor deficiency; and
2 The patient has undergone product training and has agreed upon an action plan for self-administration.

Continuation

Re-assessment required after 12 months

The treatment remains appropriate and the patient is benefiting from treatment.

Allergy Desensitisation

BEE VENOM – **Restricted** see terms below
- ⬇ Maintenance kit - 6 vials 120 mcg freeze dried venom, with diluent
- ⬇ Inj 550 mcg vial with diluent
- ⬇ Initiation kit - 1 vial freeze dried venom with diluent ..... 305.00 — 1 — VENOX
- ⬇ Maintenance Kit - 1 vial freeze dried venom with diluent ..... 305.00 — 1 — VENOX

➥ **Restricted** (RS1117)

Initiation

Both:

1 RAST or skin test positive; and
2 Patient has had severe generalised reaction to the sensitising agent.

PAPER WASP VENOM – **Restricted** see terms below
- ⬇ Treatment kit - 6 vials 120 mcg freeze dried venom, with diluent
- ⬇ Inj 550 mcg vial with diluent

➥ **Restricted** (RS1118)

Initiation

Both:

1 RAST or skin test positive; and
2 Patient has had severe generalised reaction to the sensitising agent.

YELLOW JACKET WASP VENOM – **Restricted** see terms on the next page
- ⬇ Treatment kit - 6 vials 120 mcg freeze dried venom, with diluent
- ⬇ Inj 550 mcg vial with diluent

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1119)
Initiation
Both:
1 RAST or skin test positive; and
2 Patient has had severe generalised reaction to the sensitising agent.

Anticholinergic Agents with Beta-Adrenoceptor Agonists

SALBUTAMOL WITH IPRATROPIUM BROMIDE

Aerosol inhaler 100 mcg with ipratropium bromide 20 mcg per dose

Nebuliser soln 2.5 mg with ipratropium bromide 0.5 mg per 2.5 ml ampoule ..... 11.04 — 20 — Duolin

Long-Acting Muscarinic Agents

GLYCOPYRRONIUM

Note: inhaled glycopyrronium treatment must not be used if the patient is also receiving treatment with subsidised tiotropium or umeclidinium.

Powder for inhalation 50 mcg per dose ..... 61.00 — 30 dose — Seebri Breezhaler

TIOTROPIUM BROMIDE

Note: tiotropium treatment must not be used if the patient is also receiving treatment with subsidised inhaled glycopyrronium or umeclidinium.

Soln for inhalation 2.5 mcg per dose ..... 50.37 — 60 dose — Spiriva Respimat

Powder for inhalation 18 mcg per dose ..... 50.37 — 30 dose — Spiriva

UMECLIDINIUM

Note: Umeclidinium must not be used if the patient is also receiving treatment with subsidised inhaled glycopyrronium or tiotropium bromide.

Powder for inhalation 62.5 mcg per dose ..... 61.50 — 30 dose — Incruse Ellipta

Long-Acting Muscarinic Antagonists with Long-Acting Beta-Adrenoceptor Agonists

➦ **Restricted** (RS1518)

Initiation

Re-assessment required after 2 years

Both:

1 Patient has been stabilised on a long acting muscarinic antagonist; and
2 The prescriber considers that the patient would receive additional benefit from switching to a combination product.

Continuation

Re-assessment required after 2 years

Both:

1 Patient is compliant with the medication; and
2 Patient has experienced improved COPD symptom control (prescriber determined).

Note: Combination long acting muscarinic antagonist and long acting beta-2 agonist must not be used if the patient is also receiving treatment with a combination inhaled corticosteroid and long acting beta-2 agonist.

GLYCOPYRRONIUM WITH INDACATEROL – **Restricted** see terms above

⬆ Powder for Inhalation 50 mcg with indacaterol 110 mcg ..... 81.00 — 30 dose — Ultibro Breezhaler

TIOTROPIUM BROMIDE WITH OLODATEROL – **Restricted** see terms above

⬆ Soln for inhalation 2.5 mcg with olodaterol 2.5 mcg ..... 81.00 — 60 dose — Spiolto Respimat

UMECLIDINIUM WITH VILANTEROL – **Restricted** see terms above

⬆ Powder for inhalation 62.5 mcg with vilanterol 25 mcg ..... 77.00 — 30 dose — Anoro Ellipta

Inhaled Corticosteroid with Long-Acting Muscarinic Antagonist and Beta Agonist

BUDESONIDE WITH GLYCOPYRRONIUM AND EFORMOTEROL – **Restricted** see terms on the next page

⬇ Aerosol inhaler budesonide 160 mcg with glycopyrronium 7.2 mcg and formoterol 5 mcg per dose ..... 79.15 — 120 dose — Breztri Aerosphere

⬆ Item restricted (see ➦ above); ⬇ Item restricted (see ➥ below)
e.g. Brand indicates brand example only. It is not a contracted product.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS2085)
Initiation
Both:
1 Patient has a diagnosis of COPD confirmed by spirometry or spirometry has been attempted and technically acceptable results are not possible; and
2 Either:
2.1 Both:
2.1.1 Patient is currently receiving an inhaled corticosteroid with long acting beta-2 agonist (ICS/LABA) or a long acting muscarinic antagonist with long acting beta-2 agonist (LAMA/LABA); and
2.1.2 Any of the following:
Clinical criteria:
2.1.2.1 Patient has a COPD Assessment Test (CAT) score greater than 10; or
2.1.2.2 Patient has had 2 or more exacerbations in the previous 12 months; or
2.1.2.3 Patient has had one exacerbation requiring hospitalisation in the previous 12 months; or
2.1.2.4 Patient has had an eosinophil count greater than or equal to 0.3 × 10^9 cells/L in the previous 12 months; or
2.2 Patient is currently receiving multiple inhaler triple therapy (inhaled corticosteroid with long-acting muscarinic antagonist and long-acting beta-2 agonist – ICS/LAMA/LABA) and met at least one of the clinical criteria above prior to commencing multiple inhaler therapy.

FLUTICASONE FUROATE WITH UMECLIDINIUM AND VILANTEROL – **Restricted** see terms below

⬇	Powder for inhalation fluticasone furoate 100 mcg with umeclidinium 62.5 mcg and vilanterol 25 mcg	104.24	30 dose	Trelegy Ellipta

➥ **Restricted** (RS2028)
Initiation
Both:
1 Patient has a diagnosis of COPD confirmed by spirometry or spirometry has been attempted and technically acceptable results are not possible; and
2 Either:
2.1 Both:
2.1.1 Patient is currently receiving an inhaled corticosteroid with long acting beta-2 agonist (ICS/LABA) or a long acting muscarinic antagonist with long acting beta-2 agonist (LAMA/LABA); and
2.1.2 Any of the following:
Clinical criteria:
2.1.2.1 Patient has a COPD Assessment Test (CAT) score greater than 10; or
2.1.2.2 Patient has had 2 or more exacerbations in the previous 12 months; or
2.1.2.3 Patient has had one exacerbation requiring hospitalisation in the previous 12 months; or
2.1.2.4 Patient has had an eosinophil count greater than or equal to 0.3 × 10^9 cells/L in the previous 12 months; or
2.2 Patient is currently receiving multiple inhaler triple therapy (inhaled corticosteroid with long acting muscarinic antagonist and long acting beta-2 agonist – ICS/LAMA/LABA) and met at least one of the clinical criteria above prior to commencing multiple inhaler triple therapy.

Antifibrotics

NINTEDANIB – **Restricted** see terms below

⬇	Cap 100 mg	2,554.00	60	Ofev

Initiation – idiopathic pulmonary fibrosis
Respiratory specialist
Re-assessment required after 12 months
All of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient has been diagnosed with idiopathic pulmonary fibrosis by a multidisciplinary team including a radiologist; and
2 Forced vital capacity is between 50% and 90% predicted; and
3 Nintedanib is to be discontinued at disease progression (See Note); and
4 Nintedanib is not to be used in combination with subsidised pirfenidone; and
5 Any of the following:
  5.1 The patient has not previously received treatment with pirfenidone; or
  5.2 Patient has previously received pirfenidone, but discontinued pirfenidone within 12 weeks due to intolerance; or
  5.3 Patient has previously received pirfenidone, but the patient's disease has not progressed (disease progression defined as 10% or more decline in predicted FVC within any 12 month period since starting treatment with pirfenidone).

Continuation – idiopathic pulmonary fibrosis
Respiratory specialist
Re-assessment required after 12 months
All of the following:

1 Treatment remains clinically appropriate and patient is benefitting from and tolerating treatment; and
2 Nintedanib is not to be used in combination with subsidised pirfenidone; and
3 Nintedanib is to be discontinued at disease progression (See Note).

Note: disease progression is defined as a decline in percent predicted FVC of 10% or more within any 12 month period.

PIRFENIDONE – **Restricted** see terms below

Initiation – cystic fibrosis

Respiratory physician or paediatrician

Re-assessment required after 12 months

All of the following:

1 Patient has a confirmed diagnosis of cystic fibrosis; and
2 Patient has previously undergone a trial with, or is currently being treated with, hypertonic saline; and
3 Any of the following:
  3.1 Patient has required one or more hospital inpatient respiratory admissions in the previous 12 month period; or
  3.2 Patient has had 3 exacerbations due to CF, requiring oral or intravenous (IV) antibiotics in in the previous 12 month period; or
  3.3 Patient has had 1 exacerbation due to CF, requiring oral or IV antibiotics in the previous 12 month period and a Brasfield score of < 22/25; or
  3.4 Patient has a diagnosis of allergic bronchopulmonary aspergillosis (ABPA).

Continuation – cystic fibrosis

Respiratory physician or paediatrician

The treatment remains appropriate and the patient continues to benefit from treatment.

Initiation – significant mucus production

Limited to 4 weeks treatment

Both:

1 Patient is an in-patient; and
2 The mucus production cannot be cleared by first line chest techniques.

Initiation – pleural emphyema

Limited to 3 days treatment

Both:

1 Patient is an in-patient; and
2 Patient diagnoses with pleural emphyema.

ELEXACAFTOR WITH TEZACAFTOR, IVACAFTOR AND IVACAFTOR – **Restricted** see terms on the next page

⬇ Tab elexacaftor 50 mg with tezacaftor 25 mg, ivacaftor 37.5 mg (56) and ivacaftor 75 mg (28)	27,647.39	84	Trikafta

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS2114)
Initiation
All of the following:
1 Patient has been diagnosed with cystic fibrosis; and
2 Patient is 6 years of age or older; and
3 Either:
3.1 Patient has two cystic fibrosis-causing mutations in the cystic fibrosis transmembrane regulator (CFTR) gene (one from each parental allele); or
3.2 Patient has a sweat chloride value of at least 60 mmol/L by quantitative pilocarpine iontophoresis or by Macroduct sweat collection system; and
4 Either:
4.1 Patient has a heterozygous or homozygous F508del mutation; or
4.2 Patient has a G551D mutation or other mutation responsive in vitro to elexacaftor/tezacaftor/ivacaftor (see note a); and
5 The treatment must be the sole funded CFTR modulator therapy for this condition; and
6 Treatment with elexacaftor/tezacaftor/ivacaftor must be given concomitantly with standard therapy for this condition.
Notes:
a) Eligible mutations are listed in the Food and Drug Administration (FDA) Trikafta prescribing information https://nctr-crs.fda.gov/fdalabel/services/spl/set-ids/f354423a-85c2-41c3-a9db-0f3aee135d8d/spl-doc

➥ **Restricted** (RS1818)
Initiation
Respiratory specialist or paediatrician
All of the following:
1 Patient has been diagnosed with cystic fibrosis; and
2 Either:
2.1 Patient must have G551D mutation in the cystic fibrosis transmembrane conductance regulator (CFTR) gene on at least 1 allele; or
2.2 Patient must have other gating (class III) mutation (G1244E, G1349D, G178R, G551S, S1251N, S1255P, S549N and S549R) in the CFTR gene on at least 1 allele; and
3 Patients must have a sweat chloride value of at least 60 mmol/L by quantitative pilocarpine iontophoresis or by Macroduct sweat collection system; and
4 Treatment with ivacaftor must be given concomitantly with standard therapy for this condition; and
5 Patient must not have an acute upper or lower respiratory infection, pulmonary exacerbation, or changes in therapy (including antibiotics) for pulmonary disease in the last 4 weeks prior to commencing treatment with ivacaftor; and
6 The dose of ivacaftor will not exceed one tablet or one sachet twice daily; and
7 Applicant has experience and expertise in the management of cystic fibrosis.

Initiation – Diabetic macular oedema

Ophthalmologist

Re-assessment required after 12 months

All of the following:

1 Patients have diabetic macular oedema with pseudophakic lens; and
2 Patient has reduced visual acuity of between 6/9 – 6/48 with functional awareness of reduction in vision; and
3 Either:
  3.1 Patient's disease has progressed despite 3 injections with bevacizumab; or
  3.2 Patient is unsuitable or contraindicated to treatment with anti-VEGF agents; and
4 Dexamethasone implants are to be administered not more frequently than once every 4 months into each eye, and up to a maximum of 3 implants per eye per year.

Continuation – Diabetic macular oedema

Ophthalmologist

Re-assessment required after 12 months

Both:

1 Patient's vision is stable or has improved (prescriber determined); and
2 Dexamethasone implants are to be administered not more frequently than once every 4 months into each eye, and up to a maximum of 3 implants per eye per year.

Initiation – Women of child bearing age with diabetic macular oedema

Ophthalmologist

Re-assessment required after 12 months

All of the following:

1 Patients have diabetic macular oedema; and
2 Patient has reduced visual acuity of between 6/9 – 6/48 with functional awareness of reduction in vision; and
3 Patient is of child bearing potential and has not yet completed a family; and
4 Dexamethasone implants are to be administered not more frequently than once every 4 months into each eye, and up to a maximum of 3 implants per eye per year.

DEFERASIROX – **Restricted** see terms below

⬇	Tab 125 mg dispersible	276.00	28	Exjade
⬇	Tab 250 mg dispersible	552.00	28	Exjade
⬇	Tab 500 mg dispersible	1,105.00	28	Exjade

➥ **Restricted** (RS1444)

Initiation
Haematologist
Re-assessment required after 2 years
All of the following:

1 The patient has been diagnosed with chronic iron overload due to congenital inherited anaemia; and
2 Deferasirox is to be given at a daily dose not exceeding 40 mg/kg/day; and
3 Any of the following:
  3.1 Treatment with maximum tolerated doses of deferiprone monotherapy or deferiprone and desferrioxamine combination therapy have proven ineffective as measured by serum ferritin levels, liver or cardiac MRI T2*; or
  3.2 Treatment with deferiprone has resulted in severe persistent vomiting or diarrhoea; or
  3.3 Treatment with deferiprone has resulted in arthritis; or
  3.4 Treatment with deferiprone is contraindicated due to a history of agranulocytosis (defined as an absolute neutrophil count (ANC) of < 0.5 cells per µL) or recurrent episodes (greater than 2 episodes) of moderate neutropenia (ANC 0.5 - 1.0 cells per µL).

Continuation
Haematologist
Re-assessment required after 2 years
Either:

1 For the first renewal following 2 years of therapy, the treatment has been tolerated and has resulted in clinical improvement in all three parameters namely serum ferritin, cardiac MRI T2* and liver MRI T2* levels; or
2 For subsequent renewals, the treatment has been tolerated and has resulted in clinical stability or continued improvement in all three parameters namely serum ferritin, cardiac MRI T2* and liver MRI T2* levels. .

DEFERIPRONE – **Restricted** see terms below

Irrigation Solutions

CHLORHEXIDINE WITH CETRIMIDE

⬇ Irrigation soln 0.015% with cetrimide 0.15%, 500 ml bottle

➥ **Restricted** (RS1683)

Initiation

Re-assessment required after 3 months

All of the following:

1 Patient has burns that are greater than 30% of total body surface area (BSA); and
2 For use in the perioperative preparation and cleansing of large burn areas requiring debridement/skin grafting; and
3 The use of 30 ml ampoules is impractical due to the size of the area to be covered.

Continuation

Re-assessment required after 3 months

The treatment remains appropriate for the patient and the patient is benefiting from the treatment.

Food Modules

Carbohydrate

➦ **Restricted** (RS1467)

Initiation – Use as an additive

Any of the following:

1 Cystic fibrosis; or
2 Chronic kidney disease; or
3 Cancer in children; or
4 Cancers affecting alimentary tract where there are malabsorption problems in patients over the age of 20 years; or
5 Faltering growth in an infant/child; or
6 Bronchopulmonary dysplasia; or
7 Premature and post premature infant; or
8 Inborn errors of metabolism.

Initiation – Use as a module

For use as a component in a modular formula made from at least one nutrient module and at least one further product listed in Section D of the Pharmaceutical Schedule or breast milk.

Note: Patients are required to meet any Special Authority criteria associated with all of the products used in the modular formula.

CARBOHYDRATE SUPPLEMENT – **Restricted** see terms above

⬆	Powder 96 g carbohydrate per 100 g, can	6.72	400 g	Polycal

Fat

➦ **Restricted** (RS1468)

Initiation – Use as an additive

Any of the following:

1 Patient has inborn errors of metabolism; or
2 Faltering growth in an infant/child; or
3 Bronchopulmonary dysplasia; or
4 Fat malabsorption; or
5 Lymphangiectasia; or
6 Short bowel syndrome; or
7 Infants with necrotising enterocolitis; or
8 Biliary atresia; or
9 For use in a ketogenic diet; or
10 Chyle leak; or
11 Ascites; or
12 Patient has increased energy requirements, and for whom dietary measures have not been successful.

Initiation – Use as a module

For use as a component in a modular formula made from at least one nutrient module and at least one further product listed in Section D of the Pharmaceutical Schedule or breast milk. .

Note: Patients are required to meet any Special Authority criteria associated with all of the products used in the modular formula.

LONG-CHAIN TRIGLYCERIDE SUPPLEMENT – **Restricted** see terms above

Food/Fluid Thickeners

NOTE:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

While pre-thickened drinks and supplements have not been included in Section H, Health NZ Hospitals may continue to use such products for patients with dysphagia, provided that:

- use was established prior to 1 July 2013; and
- the product has not been specifically considered and excluded by Pharmac; and
- use of the product conforms to any applicable indication restrictions for similar products that are listed in Section H (for example, use of thickened high protein products should be in line with the restriction for high protein oral feed in Section H).

Pharmac intends to make a further decision in relation to pre-thickened drinks and supplements in the future, and will notify of any change to this situation.

CITRULLINE – **Restricted** see terms on page 294			
⬆ Powder 0.8 g protein, 2.9 g carbohydrate per 4 g sachet	211.45	30	Citrulline1000
ISOLEUCINE – **Restricted** see terms on page 294			
⬆ Powder 0.04 g protein, 3.8 g carbohydrate per 4 g sachet	141.05	30	Isoleucine50

⬆ Item restricted (see ➦ above); ⬇ Item restricted (see ➥ below)
e.g. Brand indicates brand example only. It is not a contracted product.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
LEUCINE – **Restricted** see terms on page 294			
⬆ Powder 0.08 g protein, 3.7 g carbohydrate per 4 g sachet	141.05	30	Leucine100
PHENYLALANINE – **Restricted** see terms on page 294			
⬆ Powder 0.04 g protein, 3.8 g carbohydrate per 4 g sachet	141.05	30	Phenylalanine50
TYROSINE – **Restricted** see terms on page 294			
⬆ Powder 0.8 g protein, 2.9 g carbohydrate per 4 g sachet	211.45	30	Tyrosine1000
VALINE – **Restricted** see terms on page 294			
⬆ Powder 0.04 g protein, 3.8 g carbohydrate per 4 g sachet	141.05	30	Valine50

Other Fat Modified Products

ELEMENTAL FEED WITH HIGH MEDIUM CHAIN TRIGLYCERIDES – **Restricted** see terms on page 294			
⬆ Powder (neutral), 12.5 g protein, 60 g carbohydrate and 16.4 g fat per 100 g sachet	47.01	10	Emsogen

Essential Amino Acids

ESSENTIAL AMINO ACID FORMULA – **Restricted** see terms on page 294			
⬆ Powder (neutral) 79 g protein per 100 g, 200 g can	313.73	200 g	Essential Amino Acid Mix

Specialised Formulas

Diabetic Products

➡ **Restricted** (RS1215)

Initiation

Any of the following:

1 For patients with type I or type II diabetes suffering weight loss and malnutrition that requires nutritional support; or
2 For patients with pancreatic insufficiency; or
3 For patients who have, or are expected to, eat little or nothing for 5 days; or
4 For patients who have a poor absorptive capacity and/or high nutrient losses and/or increased nutritional needs from causes such as catabolism; or
5 For use pre- and post-surgery; or
6 For patients being tube-fed; or
7 For tube-feeding as a transition from intravenous nutrition.

DIABETIC ORAL FEED 1 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 4.9 g protein, 11.7 g carbohydrate, 3.8 g fat and 2 g fibre per 100 ml, 200 ml bottle	2.25	1	Diasip (strawberry) Diasip (vanilla)
LOW-GI ENTERAL FEED 1 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 5 g protein, 9.6 g carbohydrate and 5.4 g fat per 100 ml, 500 ml bottle	4.65	1	Glucerna Select
⬆ Liquid 4.3 g protein, 11.3 g carbohydrate and 4.2 g fat per 100 ml, 1,000 ml bottle			*e.g. Nutrison Advanced Diason*
LOW-GI ORAL FEED 1 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 7 g protein, 10.9 g carbohydrate, 2.7 g fat and 2 g fibre per 100 ml, 200 ml bottle	2.10	1	Nutren Diabetes (vanilla)

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
Elemental and Semi-Elemental Products			
➥ **Restricted** (RS1216)			
Initiation			
Any of the following:			
1 Malabsorption; or			
2 Short bowel syndrome; or			
3 Enterocutaneous fistulas; or			
4 Eosinophilic enteritis (including oesophagitis); or			
5 Inflammatory bowel disease; or			
6 Acute pancreatitis where standard feeds are not tolerated; or			
7 Patients with multiple food allergies requiring enteral feeding.			
AMINO ACID ORAL FEED – **Restricted** see terms above			
⬆ Powder 11 g protein, 62 g carbohydrate and 1 g fat per sachet, 80 g sachet	4.50	1	Vivonex TEN
AMINO ACID ORAL FEED 0.8 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 2.5 g protein, 11 g carbohydrate and 3.5 g fat per 100 ml, 250 ml carton	179.46	18	Elemental 028 Extra (grapefruit) Elemental 028 Extra (pineapple & orange) Elemental 028 Extra (summer fruits)
PEPTIDE-BASED ENTERAL FEED 1 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 4 g protein, 17.7 g carbohydrate and 1.7 g fat per 100 ml, 500 ml bottle	7.47	1	Nutrison Advanced Peptisorb
PEPTIDE-BASED ENTERAL FEED 1.5 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 6.75 g protein, 18.4 g carbohydrate and 5.5 g fat per 100 ml, 1,000 ml bottle	22.39	1	Vital
PEPTIDE-BASED ORAL FEED – **Restricted** see terms above			
⬆ Powder 13.7 g protein, 62.9 g carbohydrate and 17.5 g fat per 100 g, 400 g can			*e.g. Peptamen Junior*
⬆ Powder 13.8 g protein, 59 g carbohydrate and 18 g fat per 100 g, 400 g can			*e.g. MCT Pepdite; MCT Pepdite 1+*
PEPTIDE-BASED ORAL FEED 1 KCAL/ML – **Restricted** see terms above			
⬆ Liquid 5 g protein, 16 g carbohydrate and 1.69 g fat per 100 ml, carton	4.95	237 ml	Peptamen OS 1.0 (Vanilla)
Fat Modified Products			
FAT-MODIFIED FEED – **Restricted** see terms below			
⬇ Powder 12.8 g protein, 68.6 g carbohydrate and 12.9 g fat per 100 g, can	62.90	400 g	Monogen
➥ **Restricted** (RS1470)			
Initiation			
Any of the following:			

continued…

⬆ Item restricted (see ➥ above); ⬇ Item restricted (see ➥ below)
e.g. Brand indicates brand example only. It is not a contracted product.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Patient has metabolic disorders of fat metabolism; or
2 Patient has a chyle leak; or
3 Modified as a modular feed, made from at least one nutrient module and at least one further product listed in Section D of the Pharmaceutical Schedule, for adults.

Note: Patients are required to meet any Special Authority criteria associated with all of the products used in the modular formula.

Hepatic Products

➥ **Restricted** (RS1217)
Initiation
For children (up to 18 years) who require a liver transplant.

HEPATIC ORAL FEED – **Restricted** see terms above

⬆	Powder 12 g protein, 56 g carbohydrate and 22 g fat per 100 g, can	93.97	400 g	Heparon Junior

High Calorie Products

➥ **Restricted** (RS1317)
Initiation
Any of the following:
1 Patient is fluid volume or rate restricted; or
2 Patient requires low electrolyte; or
3 Both:
3.1 Any of the following:
3.1.1 Cystic fibrosis; or
3.1.2 Any condition causing malabsorption; or
3.1.3 Faltering growth in an infant/child; or
3.1.4 Increased nutritional requirements; and
3.2 Patient has substantially increased metabolic requirements.

ENTERAL FEED 2 KCAL/ML – **Restricted** see terms above

⬆	Liquid 7.5 g protein, 20 g carbohydrate and 10 g fat per 100 ml, 500 ml bottle	6.82	1	Nutrison Concentrated
⬆	Liquid 8.4 g protein, 21.9 g carbohydrate, 9.1 g fat and 0.5 g fibre per 100 ml, 1,000 ml bottle	13.64	1	Ensure Two Cal HN RTH

ORAL FEED 2 KCAL/ML – **Restricted** see terms above

⬆	Liquid 8.4 g protein, 22.4 g carbohydrate, 8.9 g fat and 0.8 g fibre per 100 ml, 200 ml bottle	2.34	1	Two Cal HN

High Protein Products

HIGH PROTEIN ENTERAL FEED 1.25 KCAL/ML – **Restricted** see terms below

⬇	Liquid 6.3 g protein, 14.2 g carbohydrate and 4.9 g fat per 100 ml, bottle	12.00	1,000 ml	Nutrison Protein Plus

➥ **Restricted** (RS1327)
Initiation
Both:

1 The patient has a high protein requirement; and
2 Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.1 Patient has liver disease; or
2.2 Patient is obese (BMI > 30) and is undergoing surgery; or
2.3 Patient is fluid restricted; or
2.4 Patient's needs cannot be more appropriately met using high calorie product.

HIGH PROTEIN ENTERAL FEED 1.26 KCAL/ML – **Restricted** see terms below

⬇ Liquid 10 g protein, 10.4 g carbohydrate and 4.9 g fat per 100 ml, bottle	8.67	500 ml	Nutrison Protein Intense

➥ **Restricted** (RS1327)

Initiation

Both:

1 The patient has a high protein requirement; and
2 Any of the following:
2.1 Patient has liver disease; or
2.2 Patient is obese (BMI > 30) and is undergoing surgery; or
2.3 Patient is fluid restricted; or
2.4 Patient's needs cannot be more appropriately met using high calorie product.

HIGH PROTEIN ENTERAL FEED 1.28 KCAL/ML – **Restricted** see terms below

⬇ Liquid 6.3 g protein, 14.1 g carbohydrate, 4.9 g fat and 1.5 g fibre per 100 ml, bottle	12.54	1,000 ml	Nutrison Protein Plus Multi Fibre

➥ **Restricted** (RS1327)

Initiation

Both:

1 The patient has a high protein requirement; and
2 Any of the following:
2.1 Patient has liver disease; or
2.2 Patient is obese (BMI > 30) and is undergoing surgery; or
2.3 Patient is fluid restricted; or
2.4 Patient's needs cannot be more appropriately met using high calorie product.

Infant Formulas

AMINO ACID FORMULA – **Restricted** see terms below

⬇ Powder 1.95 g protein, 8.1 g carbohydrate and 3.5 g fat per 100 ml, 400 g can			*e.g. Neocate*
⬇ Powder 13 g protein, 49 g carbohydrate and 23 g fat per 100 g, can	55.61	400 g	Neocate SYNEO
⬇ Powder 13.3 g protein, 56 g carbohydrate and 22 g fat per 100 g, can	55.61	400 g	Neocate Junior Unflavoured
⬇ Powder 13.3 g protein, 57 g carbohydrate and 24.6 g fat per 100 g, can	43.60	400 g	Alfamino
⬇ Powder 13.5 g protein, 52 g carbohydrate and 24.5 g fat per 100 g, can	55.61	400 g	Neocate Gold (Unflavoured)
⬇ Powder 14.8 g protein, 51.4 g carbohydrate and 23 g fat per 100 g, can	55.61	400 g	Neocate Junior Vanilla
⬇ Powder 15 g protein, 56 g carbohydrate and 20 g fat per 100 g, can	43.60	400 g	Alfamino Junior
⬇ Powder 2.2 g protein, 7.8 g carbohydrate and 3.4 g fat per 100 ml, can	65.72	400 g	Elecare LCP (Unflavoured)
⬇ Powder 2.2 g protein, 7.8 g carbohydrate and 3.4 g fat per 100 ml, can	65.72	400 g	Elecare (Unflavoured) Elecare (Vanilla)

➥ **Restricted** (RS1867)

Initiation

Any of the following:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 Extensively hydrolysed formula has been reasonably trialled for 2-4 weeks and is inappropriate due to documented severe intolerance or allergy or malabsorption; or
2 History of anaphylaxis to cows' milk protein formula or dairy products; or
3 Eosinophilic oesophagitis; or
4 Ultra-short gut; or
5 Severe Immune deficiency.

Continuation

All of the following:

1 An assessment as to whether the infant can be transitioned to a cows' milk protein, soy, or extensively hydrolysed infant formula has been undertaken; and
2 The outcome of the assessment is that the infant continues to require an amino acid infant formula; and
3 Amino acid formula is required for a nutritional deficit.

Initiation – patients who are currently funded under RS1502 or SA1557

Limited to 3 months treatment

All of the following:

1 Patient has a valid initiation or renewal approval for extensively hydrolysed formula (RS1502); and
2 Patient is unable to source funded Aptamil powder at this time; and
3 The approval only applies to funded dispensings of Neocate Gold and Neocate Syneo.

Note: This criteria is short term funding to cover an out-of-stock situation on some extensively hydrolysed formula powder funded under Hospital Restriction RS1502. There is no continuation criteria under this criterion.

ENTERAL LIQUID PEPTIDE FORMULA – **Restricted** see terms below

⬇ Liquid 4.2 g protein, 18.6 g carbohydrate and 6.58 g fat per 100 ml, 500 ml bottle	18.66	1	Nutrini Peptisorb Energy

➥ **Restricted** (RS1775)

Initiation

All of the following:

1 Patient has impaired gastrointestinal function and either cannot tolerate polymeric feeds, or polymeric feeds are unsuitable; and
2 Any of the following:
  2.1 Severe malabsorption; or
  2.2 Short bowel syndrome; or
  2.3 Intractable diarrhoea; or
  2.4 Biliary atresia; or
  2.5 Cholestatic liver diseases causing malabsorption; or
  2.6 Cystic fibrosis; or
  2.7 Proven fat malabsorption; or
  2.8 Severe intestinal motility disorders causing significant malabsorption; or
  2.9 Intestinal failure; or
  2.10 Both:
    2.10.1 The patient is currently receiving funded amino acid formula; and
    2.10.2 The patient is to be trialled on, or transitioned to, an enteral liquid peptide formula; and
3 Either:
  3.1 A semi-elemental or partially hydrolysed powdered feed has been reasonably trialled and considered unsuitable; or
  3.2 For step down from intravenous nutrition.

Note: A reasonable trial is defined as a 2-4 week trial.

Continuation

Both:

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

1 An assessment as to whether the patient can be transitioned to a cows milk protein or soy infant formula or extensively hydrolysed formula has been undertaken; and
2 The outcome of the assessment is that the patient continues to require an enteral liquid peptide formula.

EXTENSIVELY HYDROLYSED FORMULA – **Restricted** see terms below

⬇ Powder 1.6 g protein, 7.5 g carbohydrate and 3.1 g fat per 100 ml, 900 g can	36.20	900 g	Allerpro Syneo 1
⬇ Powder 1.6 g protein, 7.8 g carbohydrate and 3.2 g fat per 100 ml, 900 g can	36.20	900 g	Allerpro Syneo 2
⬇ Powder 14 g protein, 53.4 g carbohydrate and 27.3 g fat per 100 g, can	18.10	450 g	Pepti-Junior

➥ **Restricted** (RS1502)

Initiation

Any of the following:

1 Both:
  1.1 Cows' milk formula is inappropriate due to severe intolerance or allergy to its protein content; and
  1.2 Either:
    1.2.1 Soy milk formula has been reasonably trialled without resolution of symptoms; or
    1.2.2 Soy milk formula is considered clinically inappropriate or contraindicated; or
2 Severe malabsorption; or
3 Short bowel syndrome; or
4 Intractable diarrhoea; or
5 Biliary atresia; or
6 Cholestatic liver diseases causing malsorption; or
7 Cystic fibrosis; or
8 Proven fat malabsorption; or
9 Severe intestinal motility disorders causing significant malabsorption; or
10 Intestinal failure; or
11 For step down from Amino Acid Formula.

Note: A reasonable trial is defined as a 2-4 week trial, or signs of an immediate IgE mediated allergic reaction.

Continuation

Both:

1 An assessment as to whether the infant can be transitioned to a cows' milk protein or soy infant formula has been undertaken; and
2 The outcome of the assessment is that the infant continues to require an extensively hydrolysed infant formula.

FRUCTOSE-BASED FORMULA

Powder 14.6 g protein, 49.7 g carbohydrate and 30.8 g fat per 100 g, 400 g can			*e.g. Galactomin 19*

LACTOSE-FREE FORMULA

Powder 1.3 g protein, 7.3 g carbohydrate and 3.5 g fat per 100 ml, 900 g can			*e.g. Karicare Aptamil Gold De-Lact*
Powder 1.5 g protein, 7.2 g carbohydrate and 3.6 g fat per 100 ml, 900 g can			*e.g. S26 Lactose Free*

LOW-CALCIUM FORMULA

Powder 14.8 g protein, 53.7 g carbohydrate and 26.7 g fat per 100 g and tuna fish oil (DHA), can	46.18	400 g	Locasol

PAEDIATRIC ORAL/ENTERAL FEED 1 KCAL/ML – **Restricted** see terms on the next page

⬇ Liquid 2.6 g protein, 10.3 g carbohydrate, 5.4 g fat and 0.6 g fibre per 100 ml, 125 ml bottle	2.80	1	Infatrini

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1614)

Initiation – Fluid restricted or volume intolerance with faltering growth

Both:

1 Either:

1.1 The patient is fluid restricted or volume intolerant; or

1.2 The patient has increased nutritional requirements due to faltering growth; and

2 Patient is under 18 months old and weighs less than 8kg.

Note: 'Volume intolerant' patients are those who are unable to tolerate an adequate volume of infant formula to achieve expected growth rate. These patients should have first trialled appropriate clinical alternative treatments, such as concentrating, fortifying and adjusting the frequency of feeding.

PRETERM FORMULA – **Restricted** see terms below

⬇	Liquid 2.2 g protein, 8.4 g carbohydrate and 4.4 g fat per 100 ml, bottle	0.75	100 ml	S26 LBW Gold RTF
⬇	Liquid 2.3 g protein, 8.6 g carbohydrate and 4.2 g fat per 100 ml, 90 ml bottle			*e.g. Pre Nan Gold RTF*
⬇	Liquid 2.6 g protein, 8.4 g carbohydrate and 3.9 g fat per 100 ml, 70 ml bottle			*e.g. Karicare Aptamil Gold+Preterm*

➥ **Restricted** (RS1224)

Initiation

For infants born before 33 weeks' gestation or weighing less than 1.5 kg at birth.

THICKENED FORMULA

	Powder 1.8 g protein, 8.1 g carbohydrate and 3.3 g fat per 100 ml, 900 g can			*e.g. Karicare Aptamil Thickened AR*

Ketogenic Diet Products

HIGH FAT FORMULA – **Restricted** see terms below

⬇	Powder 14.3 g protein, 2.8 g carbohydrate and 69.2 g fat per 100 g, can	36.92	300 g	Ketocal 4:1 (Unflavoured) Ketocal 4:1 (Vanilla)
⬇	Powder 15.4 g protein, 7.2 g carbohydrate and 68.6 g fat per 100 g, can	36.92	300 g	Ketocal 3:1 (Unflavoured)

➥ **Restricted** (RS1225)

Initiation

For patients with intractable epilepsy, pyruvate dehydrogenase deficiency or glucose transported type-1 deficiency and other conditions requiring a ketogenic diet.

Paediatric Products

➥ **Restricted** (RS1473)

Initiation

Both:

1 Child is aged one to ten years; and

2 Any of the following:

2.1 The child is being fed via a tube or a tube is to be inserted for the purposes of feeding; or

2.2 Any condition causing malabsorption; or

2.3 Faltering growth in an infant/child; or

2.4 Increased nutritional requirements; or

2.5 The child is being transitioned from TPN or tube feeding to oral feeding; or

2.6 The child has eaten, or is expected to eat, little or nothing for 3 days.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
PAEDIATRIC ENTERAL FEED 0.76 KCAL/ML – **Restricted** see terms on the previous page			
⬆ Liquid 2.5 g protein, 12.5 g carbohydrate, 3.3 g fat and 0.7 g fibre per 100 ml, 500 ml bottle	6.27	1	Nutrini Low Energy Multi Fibre RTH

➥ **Restricted** (RS1228)
Initiation
For patients with acute or chronic kidney disease.

Surgical Products

HIGH ARGININE ORAL FEED 1.4 KCAL/ML – **Restricted** see terms below			
⬇ Liquid 10.4 g protein, 8 g carbohydrate, 4.4 g fat and 0 g fibre per 100 ml, 250 ml carton	56.00	10	Impact Advanced Recovery

➥ **Restricted** (RS1231)
Initiation
Three packs per day for 5 to 7 days prior to major gastrointestinal, head or neck surgery.

PREOPERATIVE CARBOHYDRATE FEED 0.5 KCAL/ML – **Restricted** see terms below			
⬇ Oral liq 0 g protein, 12.6 g carbohydrate and 0 g fat per 100 ml, 200 ml bottle	8.64	4	preOp

➥ **Restricted** (RS1415)
Initiation
Maximum of 400 ml as part of an Enhanced Recovery After Surgery (ERAS) protocol 2 to 3 hours before major abdominal surgery.

Standard Feeds

➥ **Restricted** (RS1214)
Initiation
Any of the following:

For patients with malnutrition, defined as any of the following:

1 Any of the following:
  1.1 BMI < 18.5; or
  1.2 Greater than 10% weight loss in the last 3-6 months; or
  1.3 BMI < 20 with greater than 5% weight loss in the last 3-6 months; or
2 For patients who have, or are expected to, eat little or nothing for 5 days; or
3 For patients who have a poor absorptive capacity and/or high nutrient losses and/or increased nutritional needs from causes such as catabolism; or
4 For use pre- and post-surgery; or
5 For patients being tube-fed; or
6 For tube-feeding as a transition from intravenous nutrition; or
7 For any other condition that meets the community Special Authority criteria.

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer
ENTERAL FEED 1.5 KCAL/ML – **Restricted** see terms on the previous page

Bacterial and Viral Vaccines

DIPHTHERIA, TETANUS, PERTUSSIS AND POLIO VACCINE – **Restricted** see terms below

⬇ Inj 30 IU diphtheria toxoid with 30IU tetanus toxoid, 25 mcg pertussis toxoid, 25 mcg pertussis filamentous haemagglutinin, 8 mcg pertactin and 80 D-antigen units poliomyelitis virus in 0.5 ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 10 — **Infanrix IPV**

➥ **Restricted** (RS1387)

Initiation

Any of the following:

1 A single dose for children up to the age of 7 who have completed primary immunisation; or
2 A course of up to four vaccines is funded for catch up programmes for children (to the age of 10 years) to complete full primary immunisation; or
3 An additional four doses (as appropriate) are funded for (re-)immunisation for patients post HSCT, or chemotherapy; pre- or post splenectomy; pre- or post solid organ transplant, renal dialysis and other severely immunosuppressive regimens; or
4 Five doses will be funded for children requiring solid organ transplantation.

Note: Please refer to the Immunisation Handbook for appropriate schedule for catch up programmes

DIPHTHERIA, TETANUS, PERTUSSIS, POLIO, HEPATITIS B AND HAEMOPHILUS INFLUENZAE TYPE B VACCINE – **Restricted** see terms below

⬇ Inj 30IU diphtheria with 40IU tetanus and 25mcg pertussis toxoids, 25mcg pertussis filamentous haemagglutinin, 8mcg pertactin, 80D-AgU polio virus, 10mcg hepatitis B antigen 10mcg H. influenzae type b with tetanus toxoid 20-40mcg in 0.5ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 10 — **Infanrix-hexa**

➥ **Restricted** (RS2051)

Initiation

Any of the following:

1 Up to four doses for children under the age of 10 years for primary immunisation; or
2 An additional four doses (as appropriate) for (re-)immunisation of children under the age of 18 years post haematopoietic stem cell transplantation; or
3 An additional four doses (as appropriate) for (re-)immunisation of children under the age of 10 years who are post chemotherapy; pre or post splenectomy; undergoing renal dialysis and other severely immunosuppressive regimens; or
4 Up to five doses for children under the age of 10 years receiving solid organ transplantation.

Note: A course of up-to four vaccines is funded for catch up programmes for children (up to and under the age of 10 years) to complete full primary immunisation. Please refer to the Immunisation Handbook for the appropriate schedule for catch up programmes.

Bacterial Vaccines

BACILLUS CALMETTE-GUERIN VACCINE – **Restricted** see terms below

⬇ Inj Mycobacterium bovis BCG (Bacillus Calmette-Guerin), Danish strain 1331, live attenuated, vial with diluent – **5% DV Dec-24 to 2027** ..... 0.00 — 10 — **BCG Vaccine AJV**

➥ **Restricted** (RS1233)

Initiation

All of the following:

For infants at increased risk of tuberculosis defined as:

1 Living in a house or family with a person with current or past history of TB; and
2 Having one or more household members or carers who within the last 5 years lived in a country with a rate of TB > or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

equal to 40 per 100,000 for 6 months or longer; and

3 During their first 5 years will be living 3 months or longer in a country with a rate of TB > or equal to 40 per 100,000.

Note: A list of countries with high rates of TB are available at http://www.health.govt.nz/tuberculosis (Search for Downloads) or www.bcgatlas.org/index.php

DIPHTHERIA, TETANUS AND PERTUSSIS VACCINE – **Restricted** see terms below

⬇ Inj 2 IU diphtheria toxoid with 20 IU tetanus toxoid, 8 mcg pertussis toxoid, 8 mcg pertussis filamentous haemagglutinin and 2.5 mcg pertactin in 0.5 ml prefilled syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 10 — **Boostrix**

➥ **Restricted** (RS1790)

Initiation

Any of the following:

1 A single dose for pregnant women in the second or third trimester of each pregnancy; or; or
2 A single dose for parents or primary caregivers of infants admitted to a Neonatal Intensive Care Unit or Specialist Care Baby Unit for more than 3 days, who had not been exposed to maternal vaccination at least 14 days prior to birth; or; or
3 A course of up to four doses is funded for children from age 7 up the age of 18 years inclusive to complete full primary immunisation; or
4 An additional four doses (as appropriate) are funded for (re-)immunisation for patients post haematopoietic stem cell transplantation or chemotherapy; pre or post splenectomy; pre- or post solid organ transplant, renal dialysis and other severely immunosuppressive regimens; or
5 A single dose for vaccination of patients aged from 65 years old; or
6 A single dose for vaccination of patients aged from 45 years old who have not had 4 previous tetanus doses; or
7 For vaccination of previously unimmunised or partially immunised patients; or
8 For revaccination following immunosuppression; or
9 For boosting of patients with tetanus-prone wounds.

Note: Please refer to the Immunisation Handbook for the appropriate schedule for catch up programmes.

HAEMOPHILUS INFLUENZAE TYPE B VACCINE – **Restricted** see terms below

⬇ Inj 10 mcg vial with diluent syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 1 — **Act-HIB**

➥ **Restricted** (RS1520)

Initiation

Therapy limited to 1 dose

Any of the following:

1 For primary vaccination in children; or
2 An additional dose (as appropriate) is funded for (re-)immunisation for patients post haematopoietic stem cell transplantation, or chemotherapy; functional asplenic; pre or post splenectomy; pre- or post solid organ transplant, pre- or post cochlear implants, renal dialysis and other severely immunosuppressive regimens; or
3 For use in testing for primary immunodeficiency diseases, on the recommendation of an internal medicine physician or paediatrician.

MENINGOCOCCAL (A, C, Y AND W-135) CONJUGATE VACCINE

⬇ Inj 10 mcg of each meningococcal polysaccharide conjugated to a total of approximately 55 mcg of tetanus toxoid carrier per 0.5 ml vial – **5% DV Dec-24 to 2027** ..... 0.00 — 1 — **MenQuadfi**

➥ **Restricted** (RS2019)

Initiation

Either:

1 Any of the following:

1.1 Up to three doses and a booster every five years for patients pre- and post splenectomy and for patients with HIV,

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

complement deficiency (acquired or inherited), functional or anatomic asplenia or pre or post solid organ transplant; or

1.2 One dose for close contacts of meningococcal cases of any group; or

1.3 One dose for person who has previously had meningococcal disease of any group; or

1.4 A maximum of two doses for bone marrow transplant patients; or

1.5 A maximum of two doses for person pre and post-immunosuppression*; or

2 Both:

2.1 Person is aged between 13 and 25 years, inclusive; and

2.2 Either:

2.2.1 One dose for individuals who are entering within the next three months, or in their first year of living in boarding school hostels, tertiary education halls of residence, military barracks, or prisons; or

2.2.2 One dose for individuals who turn 13 years of age while living in boarding school hostels.

Notes: children under seven years of age require two doses 8 weeks apart, a booster dose three years after the primary series and then five yearly.

*Immunosuppression due to steroid or other immunosuppressive therapy must be for a period of greater than 28 days.

⬇ Inj 5 mcg of each meningococcal polysaccharide conjugated to a total of approximately 44 mcg of tetanus toxoid carrier in 0.5 ml vial	0.00	1	Nimenrix

➥ **Restricted** (RS2037)

Initiation – Children under 12 months of age

Any of the following:

1 A maximum of three doses (dependant on age at first dose) for patients pre- and post- splenectomy and for patients with functional or anatomic asplenia, HIV, complement deficiency (acquired or inherited), or pre- or post- solid organ transplant; or

2 A maximum of three doses (dependant on age at first dose) for close contacts of meningococcal cases of any group; or

3 A maximum of three doses (dependant on age at first dose) for child who has previously had meningococcal disease of any group; or

4 A maximum of three doses (dependant on age at first dose) for bone marrow transplant patients; or

5 A maximum of three doses (dependant on age at first dose) for child pre- and post-immunosuppression*.

Notes: infants from 6 weeks to less than 6 months of age require a 2+1 schedule, infants from 6 months to less than 12 months of age require a 1+1 schedule. Refer to the Immunisation Handbook for recommended booster schedules with meningococcal ACWY vaccine.

*Immunosuppression due to steroid or other immunosuppressive therapy must be for a period of greater than 28 days.

MENINGOCOCCAL B MULTICOMPONENT VACCINE – **Restricted** see terms below

⬇ Inj 175 mcg per 0.5 ml prefilled syringe	0.00	1	Bexsero
		10	Bexsero

➥ **Restricted** (RS2020)

Initiation – Primary immunisation for children up to 12 months of age

Therapy limited to 3 doses

Either:

1 Three doses for children up to 12 months of age (inclusive) for primary immunisation; or

2 Up to three doses (dependent on age at first dose) for a catch-up programme for children from 13 months to 59 months of age (inclusive) for primary immunisation, from 1 March 2023 to 31 August 2025.

Initiation – Person is one year of age or over

Any of the following:

1 up to two doses and a booster every five years for patients pre- and post-splenectomy and for patients with functional or anatomic asplenia, HIV, complement deficiency (acquired or inherited), or pre- or post-solid organ transplant; or

continued…

continued…

2 up to two doses for close contacts of meningococcal cases of any group; or
3 up to two doses for person who has previously had meningococcal disease of any group; or
4 up to two doses for bone marrow transplant patients; or
5 up to two doses for person pre- and post-immunosuppression* .

Initiation – Person is aged between 13 and 25 years (inclusive)
Therapy limited to 2 doses
Both:

1 Person is aged between 13 and 25 years (inclusive); and
2 Either:
2.1 Two doses for individuals who are entering within the next three months, or in their first year of living in boarding school hostels, tertiary education halls of residence, military barracks, Youth Justice residences, or prisons; or
2.2 Two doses for individuals who turn 13 years of age while living in boarding school hostels.

Note: *Immunosuppression due to corticosteroid or other immunosuppressive therapy must be for a period of greater than 28 days.

PNEUMOCOCCAL (PCV13) CONJUGATE VACCINE – **Restricted** see terms below

⬇ Inj 30.8 mcg of pneumococcal polysaccharide serotypes 1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19A, 19F and 23F in 0.5 ml syringe – **5% DV**

Dec-24 to 2027	0.00	1	**Prevenar 13**
		10	**Prevenar 13**

➥ **Restricted** (RS1936)

Initiation – Primary course for previously unvaccinated children aged under 5 years
Therapy limited to 3 doses
A primary course of three doses for previously unvaccinated children up to the age of 59 months inclusive.
Initiation – High risk individuals who have received PCV10
Therapy limited to 2 doses
Two doses are funded for high risk individuals (over the age of 12 months and under 18 years) who have previously received two doses of the primary course of PCV10.
Initiation – High risk children aged under 5 years
Therapy limited to 4 doses
Both:

1 Up to an additional four doses (as appropriate) are funded for the (re)immunisation of high-risk children aged under 5 years; and
2 Any of the following:
2.1 on immunosuppressive therapy or radiation therapy, vaccinate when there is expected to be a sufficient immune response; or
2.2 primary immune deficiencies; or
2.3 HIV infection; or
2.4 renal failure, or nephrotic syndrome; or
2.5 are immune-suppressed following organ transplantation (including haematopoietic stem cell transplant); or
2.6 cochlear implants or intracranial shunts; or
2.7 cerebrospinal fluid leaks; or
2.8 receiving corticosteroid therapy for more than two weeks, and who are on an equivalent daily dosage of prednisone of 2 mg/kg per day or greater, or children who weigh more than 10 kg on a total daily dosage of 20 mg or greater; or
2.9 chronic pulmonary disease (including asthma treated with high-dose corticosteroid therapy); or
2.10 pre term infants, born before 28 weeks gestation; or
2.11 cardiac disease, with cyanosis or failure; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.12 diabetes; or
2.13 Down syndrome; or
2.14 who are pre-or post-splenectomy, or with functional asplenia.

Initiation – High risk individuals 5 years and over

Therapy limited to 4 doses

Up to an additional four doses (as appropriate) are funded for the (re-)immunisation of individuals 5 years and over with HIV, pre or post haematopoietic stem cell transplantation, or chemotherapy; pre- or post splenectomy; functional asplenia, pre- or post-solid organ transplant, renal dialysis, complement deficiency (acquired or inherited), cochlear implants, intracranial shunts, cerebrospinal fluid leaks or primary immunodeficiency.

Initiation – Testing for primary immunodeficiency diseases

For use in testing for primary immunodeficiency diseases, on the recommendation of an internal medicine physician or paediatrician.

Note: Please refer to the Immunisation Handbook for the appropriate schedule for catch up programmes

PNEUMOCOCCAL (PPV23) POLYSACCHARIDE VACCINE – **Restricted** see terms below

⬇ Inj 575 mcg in 0.5 ml prefilled syringe (25 mcg of each 23 pneumococcal serotype) – **5% DV Dec-24 to 2027** ..... 0.00 1 **Pneumovax 23**

➥ **Restricted** (RS1587)

Initiation – High risk patients

Therapy limited to 3 doses

For patients with HIV, for patients post haematopoietic stem cell transplant, or chemotherapy; pre- or post-splenectomy; or with functional asplenia, pre- or post-solid organ transplant, renal dialysis, complement deficiency (acquired or inherited), cochlear implants, or primary immunodeficiency.

Initiation – High risk children

Therapy limited to 2 doses

Both:

1 Patient is a child under 18 years for (re-)immunisation; and
2 Any of the following:
2.1 On immunosuppressive therapy or radiation therapy, vaccinate when there is expected to be a sufficient immune response; or
2.2 With primary immune deficiencies; or
2.3 With HIV infection; or
2.4 With renal failure, or nephrotic syndrome; or
2.5 Who are immune-suppressed following organ transplantation (including haematopoietic stem cell transplant); or
2.6 With cochlear implants or intracranial shunts; or
2.7 With cerebrospinal fluid leaks; or
2.8 Receiving corticosteroid therapy for more than two weeks, and who are on an equivalent daily dosage of prednisone of 2 mg/kg per day or greater, or children who weigh more than 10 kg on a total daily dosage of 20 mg or greater; or
2.9 With chronic pulmonary disease (including asthma treated with high-dose corticosteroid therapy); or
2.10 Pre term infants, born before 28 weeks gestation; or
2.11 With cardiac disease, with cyanosis or failure; or
2.12 With diabetes; or
2.13 With Down syndrome; or
2.14 Who are pre-or post-splenectomy, or with functional asplenia.

Initiation – Testing for primary immunodeficiency diseases

For use in testing for primary immunodeficiency diseases, on the recommendation of an internal medicine physician or paediatrician.

SALMONELLA TYPHI VACCINE – **Restricted** see terms on the next page

⬇ Inj 25 mcg in 0.5 ml syringe

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1243)
Initiation
For use during typhoid fever outbreaks.

Viral Vaccines

COVID-19 VACCINE
⬇ Inj 3 mcg bretovameran per 0.3 ml, 0.48 ml vial; infant vaccine, yellow cap ..... 0.00 — 10 — Comirnaty Omicron (JN.1)

➥ **Restricted** (RS2042)
Initiation – initial dose
Up to three doses for previously unvaccinated children aged 6 months – 4 years at high risk of severe illness.

⬇ Inj 10 mcg bretovameran per 0.3 ml, 0.48 ml vial; paediatric vaccine, light blue cap ..... 0.00 — 10 — Comirnaty Omicron (JN.1)

➥ **Restricted** (RS2041)
Initiation – initial dose
Either:
1 One dose for previously unvaccinated children aged 5-11 years old; or
2 Up to three doses for immunocompromised children aged 5-11 years old.

⬇ Inj 30 mcg bretovameran per 0.3 ml, 0.48 ml vial; adult vaccine, light grey cap ..... 0.00 — 10 — Comirnaty Omicron (JN.1)

➥ **Restricted** (RS2040)
Initiation – initial dose
Any of the following:
1 One dose for previously unvaccinated people aged 12-15 years old; or
2 Up to three doses for immunocompromised people aged 12-15 years old; or
3 Up to two doses for previously unvaccinated people 16-29 years old; or
4 Up to four doses for people aged 16-29 at high risk of severe illness; or
5 One dose for previously unvaccinated people aged 30 and older.

Initiation – additional dose
One additional dose every 6 months for people aged 30 years and over, additional dose is given at least 6 months after last dose.
Continuation – additional dose
One additional dose every 6 months for people aged 30 years and over, additional dose is given at least 6 months after last dose.

HEPATITIS A VACCINE – **Restricted** see terms below
⬇ Inj 720 ELISA units in 0.5 ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 1 — **Havrix Junior**
⬇ Inj 1440 ELISA units in 1 ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 1 — **Havrix 1440**
➥ **Restricted** (RS1638)
Initiation
Any of the following:
1 Two vaccinations for use in transplant patients; or
2 Two vaccinations for use in children with chronic liver disease; or
3 One dose of vaccine for close contacts of known hepatitis A cases.

HEPATITIS B RECOMBINANT VACCINE
⬇ Inj 10 mcg per 0.5 ml prefilled syringe – **5% DV Dec-24 to 2027** ..... 0.00 — 1 — **Engerix-B**

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS2049)
Initiation
Any of the following:
1 For household or sexual contacts of known acute hepatitis B patients or hepatitis B carriers; or
2 For children born to mothers who are hepatitis B surface antigen (HBsAg) positive; or
3 For children up to and under the age of 18 years inclusive who are considered not to have achieved a positive serology and require additional vaccination or require a primary course of vaccination; or
4 For HIV positive patients; or
5 For hepatitis C positive patients; or
6 For patients following non-consensual sexual intercourse; or
7 For patients prior to planned immunosuppression for greater than 28 days; or
8 For patients following immunosuppression; or
9 For solid organ transplant patients; or
10 For post-haematopoietic stem cell transplant (HSCT) patients; or
11 Following needle stick injury.

⬇ Inj 20 mcg per 1 ml prefilled syringe – **5% DV Dec-24 to 2027** ..... 0.00 1 **Engerix-B**
➥ **Restricted** (RS2050)
Initiation
Any of the following:
1 For household or sexual contacts of known acute hepatitis B patients or hepatitis B carriers; or
2 For children born to mothers who are hepatitis B surface antigen (HBsAg) positive; or
3 For children up to and under the age of 18 years inclusive who are considered not to have achieved a positive serology and require additional vaccination or require a primary course of vaccination; or
4 For HIV positive patients; or
5 For hepatitis C positive patients; or
6 For patients following non-consensual sexual intercourse; or
7 For patients prior to planned immunosuppression for greater than 28 days; or
8 For patients following immunosuppression; or
9 For solid organ transplant patients; or
10 For post-haematopoietic stem cell transplant (HSCT) patients; or
11 Following needle stick injury; or
12 For dialysis patients; or
13 For liver or kidney transplant patients.

HUMAN PAPILLOMAVIRUS (6, 11, 16, 18, 31, 33, 45, 52 AND 58) VACCINE [HPV] – **Restricted** see terms below
⬇ Inj 270 mcg in 0.5 ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 10 **Gardasil 9**
➥ **Restricted** (RS2038)
Initiation – Children aged 14 years and under
Therapy limited to 2 doses
Children aged 14 years and under.
Initiation – other conditions
Either:
1 Up to 3 doses for people aged 15 to 26 years inclusive; or
2 Both:
2.1 People aged 9 to 26 years inclusive; and
2.2 Any of the following:
2.2.1 Up to 3 doses for confirmed HIV infection; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

2.2.2 Up to 3 doses people with a transplant (including stem cell); or
2.2.3 Up to 4 doses for Post chemotherapy.

Initiation – Recurrent Respiratory Papillomatosis

All of the following:

1 Either:
1.1 Maximum of two doses for children aged 14 years and under; or
1.2 Maximum of three doses for people aged 15 years and over; and
2 The person has recurrent respiratory papillomatosis; and
3 The person has not previously had an HPV vaccine.

INFLUENZA VACCINE

⬇	Inj 60 mcg in 0.5 ml syringe (quadrivalent vaccine).....	120.00	10	Influvac Tetra (2025 formulation)

➥ **Restricted** (RS2013)

Initiation – People over 65

The patient is 65 years of age or over.

Initiation – cardiovascular disease

Any of the following:

1 Ischaemic heart disease; or
2 Congestive heart failure; or
3 Rheumatic heart disease; or
4 Congenital heart disease; or
5 Cerebro-vascular disease.

Note: hypertension and/or dyslipidaemia without evidence of end-organ disease is excluded from funding.

Initiation – chronic respiratory disease

Either:

1 Asthma, if on a regular preventative therapy; or
2 Other chronic respiratory disease with impaired lung function.

Note: asthma not requiring regular preventative therapy is excluded from funding.

Initiation – Other conditions

Either:

1 Any of the following:
1.1 Diabetes; or
1.2 chronic renal disease; or
1.3 Any cancer, excluding basal and squamous skin cancers if not invasive; or
1.4 Autoimmune disease; or
1.5 Immune suppression or immune deficiency; or
1.6 HIV; or
1.7 Transplant recipient; or
1.8 Neuromuscular and CNS diseases/ disorders; or
1.9 Haemoglobinopathies; or
1.10 Is a child on long term aspirin; or
1.11 Has a cochlear implant; or
1.12 Errors of metabolism at risk of major metabolic decompensation; or
1.13 Pre and post splenectomy; or
1.14 Down syndrome; or
1.15 Is pregnant; or
1.16 Is a child 4 years of age or under (inclusive) who has been hospitalised for respiratory illness or has a history of

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

significant respiratory illness; or

2 Patients in a long-stay inpatient mental health care unit or who are compulsorily detained long-term in a forensic unit within a Public Hospital.

Initiation – Serious mental health conditions or addiction

Any of the following:

1 schizophrenia; or
2 major depressive disorder; or
3 bipolar disorder; or
4 schizoaffective disorder; or
5 person is currently accessing secondary or tertiary mental health and addiction services.

MEASLES, MUMPS AND RUBELLA VACCINE – **Restricted** see terms below

⬇ Injection, measles virus 1,000 CCID50, mumps virus 5,012 CCID50, Rubella virus 1,000 CCID50; prefilled syringe/ampoule of diluent 0.5 ml – **5% DV Dec-24 to 2027** ..... 0.00 10 **Priorix**

➥ **Restricted** (RS1487)

Initiation – first dose prior to 12 months

Therapy limited to 3 doses

Any of the following:

1 For primary vaccination in children; or
2 For revaccination following immunosuppression; or
3 For any individual susceptible to measles, mumps or rubella.

Initiation – first dose after 12 months

Therapy limited to 2 doses

Any of the following:

1 For primary vaccination in children; or
2 For revaccination following immunosuppression; or
3 For any individual susceptible to measles, mumps or rubella.

Note: Please refer to the Immunisation Handbook for appropriate schedule for catch up programmes.

POLIOMYELITIS VACCINE – **Restricted** see terms below

⬇ Inj 80 D-antigen units in 0.5 ml syringe – **5% DV Dec-24 to 2027** ..... 0.00 1 **IPOL**

➥ **Restricted** (RS1398)

Initiation

Therapy limited to 3 doses

Either:

1 For partially vaccinated or previously unvaccinated individuals; or
2 For revaccination following immunosuppression.

Note: Please refer to the Immunisation Handbook for the appropriate schedule for catch up programmes.

RABIES VACCINE

Inj 2.5 IU vial with diluent

ROTAVIRUS ORAL VACCINE – **Restricted** see terms on the next page

⬇ Oral susp live attenuated human rotavirus 1,000,000 CCID50 per dose, prefilled oral applicator – **5% DV Dec-24 to 2027** ..... 0.00 10 **Rotarix**

⬇ Oral susp live attenuated human rotavirus 1,000,000 CCID50 per dose, squeezable tube ..... 0.00 10 Rotarix

⬇ Oral susp live attenuated human rotavirus 1,000,000 CCID50 per dose, squeezable tube (PVC free) ..... 0.00 10 Rotarix

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

➥ **Restricted** (RS1590)
Initiation
Therapy limited to 2 doses
Both:

1 First dose to be administered in infants aged under 14 weeks of age; and
2 No vaccination being administered to children aged 24 weeks or over.

VARICELLA VACCINE [CHICKENPOX VACCINE]

⬇	Inj 2000 PFU prefilled syringe plus vial – **5% DV Dec-24 to 2027**	0.00	10	**Varilrix**

➥ **Restricted** (RS1591)
Initiation – primary vaccinations
Therapy limited to 1 dose
Either:

1 Any infant born on or after 1 April 2016; or
2 For previously unvaccinated children turning 11 years old on or after 1 July 2017, who have not previously had a varicella infection (chickenpox).

Initiation – other conditions
Therapy limited to 2 doses
Any of the following:

1 Any of the following:
for non-immune patients:
1.1 With chronic liver disease who may in future be candidates for transplantation; or
1.2 With deteriorating renal function before transplantation; or
1.3 Prior to solid organ transplant; or
1.4 Prior to any elective immunosuppression*; or
1.5 For post exposure prophylaxis who are immune competent inpatients; or
2 For patients at least 2 years after bone marrow transplantation, on advice of their specialist; or
3 For patients at least 6 months after completion of chemotherapy, on advice of their specialist; or
4 For HIV positive patients non immune to varicella with mild or moderate immunosuppression on advice of HIV specialist; or
5 For patients with inborn errors of metabolism at risk of major metabolic decompensation, with no clinical history of varicella; or
6 For household contacts of paediatric patients who are immunocompromised, or undergoing a procedure leading to immune compromise where the household contact has no clinical history of varicella; or
7 For household contacts of adult patients who have no clinical history of varicella and who are severely immunocompromised or undergoing a procedure leading to immune compromise where the household contact has no clinical history of varicella.

Note: * immunosuppression due to steroid or other immunosuppressive therapy must be for a treatment period of greater than 28 days

VARICELLA ZOSTER VACCINE [SHINGLES VACCINE] – **Restricted** see terms below

⬇	Inj 50 mcg per 0.5 ml vial plus vial	0.00	1	Shingrix
			10	Shingrix

➥ **Restricted** (RS2039)
Initiation – people aged 18 years and over (Shingrix)
Therapy limited to 2 doses
Any of the following:

1 Pre- and post-haematopoietic stem cell transplant or cellular therapy; or
2 Pre- or post-solid organ transplant; or

continued…

	Price (ex man. excl. GST) $	Per	Brand or Generic Manufacturer

continued…

3 Haematological malignancies; or
4 People living with poorly controlled HIV infection; or
5 Planned or receiving disease modifying anti-rheumatic drugs (DMARDs – targeted synthetic, biologic, or conventional synthetic) for polymyalgia rheumatica, systemic lupus erythematosus or rheumatoid arthritis; or
6 End stage kidney disease (CKD 4 or 5);; or
7 Primary immunodeficiency.
